<div>A. (U) Mission Description and Budget Item Justification: This program develops processes, prototype hardware, systems, and operational procedures that will allow the Navy to operate in U.S., foreign, and international waters, air, space, and land areas while complying with U.S. statutes and international agreements. The program also includes efforts to improve the Navy's response to salvage-related pollution incidents. Projects support the Navy's compliance with: OPNAVINST 5090.1B CH-2 of 9 September 1999 and other Navy environmental-related policies; the Clean Water Act, Clean Air Act, Act to Prevent Pollution from Ships, National Environmental Policy Act, Marine Plastic Pollution Research and Control Act, Endangered Species Act, Marine Mammal Protection Act, Resource Conservation and Recovery Act, Toxic Substances Control Act, U.S. Public Vessel Medical Waste Anti-Dumping Act, and Federal Facility Compliance Act; and Executive Orders 12088, 12114, 12843, 13089, 13101, 13112, and 13158. Project S0401 supports RDT&E efforts that allow Navy ships and submarines to comply with existing and emerging laws, regulations, and policies in four major areas: ozone depleting substances, liquid wastes, solid wastes, and hazardous and other wastes. Project W2210 and Project Y0817 support and validate development of technologies to enable Navy facilities to comply with environmental laws, regulations, and policies in a cost-effective manner.</div> <div>* Projects W2623, Y2402, Y2403 and Y2837 are Congressional adds.</div>

A. (U) Mission Description and Budget Item Justification										
1. (U) FY 2000 ACCOMPLISHMENTS:										
(U) (\$12.548M) Ozone Depleting Substances - Completed development of backfit modification kits for surface ship 125-ton & 150-ton CFC-114 air-conditioning plant designs. Completed development of backfit modification kits for surface ship 300-ton and 363-ton CFC-114 air-conditioning plant designs. Completed one-year at-sea ship test and evaluation of HFC-236fa backfit modifications in 200-ton CFC-114 air-conditioning plants. Continued development and qualification of backfit modifications for remaining surface ship 250-ton CFC-114 air-conditioning plant designs. Continued development of shipboard alternative (non-vapor-compression) cooling concepts. Continued evaluation of non-ODS fire protection concepts and systems for future surface combatants.										
(U) (\$24.016M) Integrated Liquid Wastes - Continued support of rulemaking process with Environmental Protection Agency (EPA) in development of Uniform National Discharge Standards (UNDS) for liquid waste discharges from Navy vessels: continued Phase II, setting of Marine Pollution Control Device (MPCD) performance standards. Continued development of integrated liquid waste treatment system: continued development of 10 gal/min Oily Waste Polishing System (OWPS) OWS-10 Polisher, continued development of 50-gal/min OWPS OWS-50 Polisher, and initiated development of 5-gal/min combined OWPS OWS-5 Polisher for new-construction ships; continued development of Engineering Development Model (EDM) non-oily wastewater treatment systems; continued development of advanced Oil Content Monitor (OCM); completed test and evaluation of upgraded shipboard vortex sewage incinerator; and initiated development of advanced thermal destruction system for concentrated ship liquid wastes. Continued development of design fixes for compensated fuel ballast systems.										
(U) (\$7.200M) Solid Wastes - Continued development of management processes and systems for plastics for submarine application: converted SSN-688 Class submarine Temporary Alteration (TEMPALT) to a Ship Alteration (SHIPALT) and upgraded test submarines; performed TEMPALTs of prototype equipment aboard two SSBN-726 Class submarines and conducted at-sea test and evaluation; completed investigation of onboard storage techniques and locations for SSN-21 Class submarines; and initiated investigation of onboard storage techniques and locations for SSN-774 Class submarines. Initiated development of advanced thermal destruction system for processing shipboard solid wastes.										
(U) (\$9.000M) Hazardous and Other Major Ship Wastes - Continued shipboard hazardous materials substitution and elimination process and continued test and evaluation of pollution prevention equipment aboard ship. Continued quality assurance testing on reformulated commercial paints. Continued development of oil spill response capabilities: completed development of oil and skimmer tracking system; continued development of Recovered Oil Logistics System; and initiated oil spill risk assessment program for major Navy ports. Continued development of marine mammals ship database tracking system. Initiated development and testing of new low-copper underwater hull antifouling coatings. Initiated development of underwater hull cleaning system.

A. (U) Mission Description and Budget Item Justification: This project supports developmentand implementationof technologies which will lead to environmentallysafe naval aviation operations and support; compliance with international, federal, state, and local regulations and policies; reduction of increasing compliance costs and personal liability; and enhancement of naval aviationmission effectiveness. Naval aviation pollution prevention efforts were previously supported by Project Y0817, Pollution Abatement Ashore. This project will support that part of project Y0817 that addressed aviation pollution prevention technologies as well as additional operationaland shipboard aviation requirements previously unsupported. Specific regulatory requirements include Executive Orders 12856 (Pollution Prevention) and 12873 (Recycling & Waste Prevention), the Clean Air Act (CAA) and associated National Emission Standards for Hazardous Air Pollutants (NESHAPs) and National Ambient Air Quality Standards (NAAQS), the Clean Water Act (CWA), the Resource Conservation and Recovery Act (RCRA), as well as Occupational,Safety and Health Administration (OSHA) standards.										
1. (U) FY 2000 ACCOMPLISHMENTS:										
(U) (\$2.308M) Continued to research, develop, and test alternatives to aircraft finishing, repair and maintenance processes that use toxic heavy metals, hazardous air pollutants (HAPs), and volatile organic compounds (VOCs). Continued to formulate and certify newly developedaircraft coatings. Continued technology research development,demonstrations/validationsof alternatives to chromium and cadmium electroplating processes. Continued to develop and validate source reduction in aircraft wash. Continued to develop and demonstrate alternative propulsion system technologies that minimize the use and generation of hazardous materialsin manufacturing and repair processes. Completed developmentand demonstration of the following technologies: waterbornetopcoats, electrocoat/powdercoat, flashjet, non-HAPs paint purge solvents, non-HAPs chemical strippers, zinc/nickel plating as a cadmium replacement, tin-zinc plating as a cadmium replacement, CO2 retrofit of portable chlorofluorocarbon (CFC) fire extinguishers, reduction of halon 1301 release during maintenance and glass bead media recycling. Continued development of non-chromated paint primers, non-HAP sealants, mobile paint stripping technology, non-HAPs pre-paint cleaner.										
(U) (\$0.290M) Continued to provide scientific and technical expertise for continued aviation pollution prevention technology development, demonstration, and validation.										
(U) (\$0.535M) Continued to develop and demonstrate low VOCs, non-chromated adhesive bonding primers, and aluminum-manganese electroplating as a cadmium replacement.										
(U) (\$0.440M) Continued to develop and demonstrate conversion coatings alternatives.										
(U) (\$0.280M) Initiated development and demonstration of alternative ordnance materials and processes.										
(U) (\$0.327M) Initiated development and demonstration of environmentally compatible Aircraft Launch and Recovery Equipment (ALRE) lubricants and certify processes that reduce their emission to the sea.

<p>2. (U) FY 2001 PLAN:</p> <p>(U) (\$2.798M) Continue to research, develop, and test alternatives to aircraft manufacturing, finishing, repair and maintenance processes that use toxic heavy metals, hazardous air pollutants (HAPs), and volatile organic compounds (VOCs). Continue to formulate and certify newly developed aircraft coatings. Continue technology research development, demonstrations/validations of alternatives to chromium and cadmium electroplating processes. Continue to develop and validate source reduction in aircraft wash. Continue to develop and demonstrate alternative propulsion system technologies that minimize the use and generation of hazardous materials in operations, manufacturing and repair processes. Initiate development of low engine emissions technology. Complete development of non-chromated paint primers, non-HAP sealants, mobile paint stripping technology, non-HAPs pre-paint cleaner.</p> <p>(U) (\$0.290M) Continue to provide scientific and technical expertise for continued aviation pollution prevention technology development, demonstration and validation.</p> <p>(U) (\$0.535M) Continue to develop and demonstrate low-VOC, non-chromated adhesive bonding primers and aluminum-manganese as a cadmium replacement.</p> <p>(U) (\$0.445M) Complete development and demonstration of conversion coatings alternatives.</p> <p>(U) (\$0.280M) Continue development and demonstration of alternative ordnance materials and processes.</p> <p>(U) (\$0.412M) Continue development and demonstration of environmentally compatible Aircraft Launch and Recovery Equipment (ALRE) lubricants and certify processes that reduce their emission to the sea.</p> <p>(U) (\$0.008M) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 USC 638.</p> <p>3. (U) FY 2002 PLAN:</p> <p>(U) (\$2.100M) Continue to research, develop, and test alternatives to aircraft manufacturing, finishing, repair and maintenance processes that use toxic heavy metals, hazardous air pollutants (HAPs), and volatile organic compounds (VOCs). Continue to formulate and certify newly developed aircraft coatings. Continue technology research development, demonstrations/validations of alternatives to chromium and cadmium electroplating processes. Continue to develop and validate source reduction in aircraft wash. Continue to develop and demonstrate alternative propulsion system technologies that minimize the use and generation of hazardous materials in operations, manufacturing and repair processes. Continue development of low engine emissions technology. Initiate testing of non-chrome anodize coatings. Initiate flight evaluations of high velocity oxy fuel (HVOF) coatings and non-chrome anodize coating. Initiate evaluations of environmentally compliant Sol-Gel materials. Initiate development of a low emissions combustor technology. Complete evaluation of zero VOC exterior aircraft coating. Complete development of aluminum-manganese coatings as cadmium plating replacements.</p> <p>(U) (\$0.331M) Continue to provide scientific and technical expertise for continued aviation pollution prevention technology development, demonstration and validation: initiate flight evaluation of a non-chrome anodizing technology.</p> <p>(U) (\$0.426M) Initiate evaluation of low-VOC bonding, petroleum distillate (PD) solvent alternatives.</p> <p>(U) (\$0.426M) Initiate flight evaluations of conversion coating alternatives, aluminum manganese (Al/Mn) coatings.</p> <p>(U) (\$0.950M) Continue development and demonstration of alternative weapons and ordnance materials and processes.</p> <p>(U) (\$0.378M) Continue development and demonstration of environmentally acceptable ALRE technologies.</p>

A. (U) Mission Description and Budget Item Justification: This project develops and validates new technologies needed to address pervasive Navy shoreside environmental requirements imposed on Naval shore activities by the need to comply with environmental laws, regulations, orders, and policies. The goal of the program is to minimize personnel liabilities, operational costs, and regulatory oversight while preserving or enhancing the ability of Naval shore activities to accomplish their required missions and functions. Each project task addresses one or more of the requirements from the Navy Environmental Quality RDT&E Strategic Plan of October 1994. The plan is being updated and upon Chief of Naval Operations approval it will govern future task selections. Project investment is made in five thrust areas:

(U) SHIP MAINTENANCE/REPAIR/DEACTIVATION

(U) Thus far, tasks in this thrust area have addressed environmental requirements originating at Naval shipyards. As the Navy pursues a strategy to reduce ship maintenance costs by shifting work to Ship Intermediate Maintenance Activities (SIMAs), new requirements are emerging as these processes and resulting hazardous waste streams become more decentralized. SIMAs will require technologies that are cost-effective when operated less frequently and with lower throughput. Future SIMA tasks will be selected based on compliance and pollution prevention studies being conducted on the Naval Station Mayport SIMA as part of the Navy Environmental Leadership Program (NELP) during FY 1999.

(U) ORDNANCE TESTING/MANUFACTURE/DISPOSAL

(U) Current tasks in this thrust address specific compliance-driven environmental requirements of Navy ordnance activities. With respect to disposal, the thrust addresses requirements for disposal of quantities typical of testing and manufacturing operations, not of the much larger quantities associated with demilitarization. Future tasks will shift much of the investment in this area to pollution prevention requirements, particularly where they also reduce compliance impacts and costs. These tasks will be identified as part of an ordnance environmental requirements study being conducted in partnership with the Navy's Ordnance Environmental Specialty Office (OESO) during FY 1999.

(U) OTHER INDUSTRIAL OPERATIONS

(U) Tasks in this thrust address compliance and pollution prevention environmental requirements originating from the industrial operations of Navy Public Works Centers and Naval Stations. As part of an overall Navy strategy, future tasks will shift more of the investment from compliance technologies to pollution prevention technologies that are cost-effective solutions to compliance requirements. It is also expected that there will be new requirements driven by the trend towards stricter federal, state, and local air emission regulations.

APPROPRIATION/BUDGET ACTIVITY	PROGRAM ELEMENT NAME AND NUMBER	PROJECT NAME AND NUMBER
RDT&E, BA4	Environmental Protection / PE0603721N	Pollution Abatement /Y0817
<p>(U) NON-INDUSTRIAL OPERATIONS</p> <p>(U) Tasks in this thrust address requirements to reduce air and water emissions (CAA, CWA), hazardous waste (RCRA) generation, and cost of environmental compliance for non-industrial operations occurring at Naval activities. In addition, tasks evaluate alternative restoration technologies for the over 1000 Navy sites requiring cleanup and restoration under CERCLA. The alternative restoration tasks are selected and linked to the urgent requirements of specific restoration projects in partnership with the Navy's Alternative Restoration Technology Team (ARTT). It is expected that one area requiring new investment is technologies to reduce the long-term operation and monitoring costs of installation restoration projects.</p> <p>(U) HAZARDOUS WASTE MINIMIZATION/RECYCLING/DISPOSAL</p> <p>(U) Prior tasks have shown that the Navy neither has the funding required to acquire a new government-owned hazardous waste treatment system nor a large enough hazardous waste stream to make a new contractor-owned treatment systems profitable. Tasks now primarily address requirements to upgrade capabilities of Navy-owned industrial waste treatment plants (IWTPs) and/or to pre-treat Navy-generated wastes prior to being discharged to publicly-owned wastewater treatment systems (POWTS)</p> <p>1. (U) FY 2000 ACCOMPLISHMENTS</p> <p>(U) (\$1.964M) Ship Maintenance/Repair/Deactivation- Continued development of Automated Paint Application with Overspray Capture and Treatment. Continued development of Air Emission Reduction from Shipyard Cutting and Arc-Gouging Operations. Initiated development of Advanced Oil Spill Equipment. Initiated development of techniques for Real-Time Monitoring of Copper Effluents from dry-dock operations.</p> <p>(U) (\$2.000M) Ordnance Testing/Manufacture/Disposal - Completed ordnance environmental requirements study conducted in partnership with Navy's Ordnance Environmental Specialty Office (OESO). Continued development of Exhaust Scrubber for Static Testing of Small Rocker Motors: initiated fabrication of phase 2 prototype. Continued development of Confined Burn Facility to Replace Open Burning of Ordnances and Energetics.</p> <p>(U) (\$1.647M) Other Industrial Operations - Completed development of model for Engine Test Cell Emissions Reduction: completed validation of approaches to reduce nitrous oxide, particle, and noise emissions. Completed development of In-Line Monitoring and Diversion of Problem Contaminants in Discharges to automatically detect and divert occasional wastewater discharges with treatment-resistant contaminants. Completed development and evaluation of T-56 Gas Path Wastewater Treatment using modified Closed-Loop Aircraft Washrack Wastewater System developed in FY98. Initiated task to address requirements for Reduced Air Emissions from Diesel Engines.</p>

<p>B. (U) Other Program Funding Summary: This project transitions technologies from PE0603712N, Environmental Quality, Logistics Advanced Technology Demonstrations Program, and PE0603716D, the Strategic Environmental Research and Development Program (SERDP). Whenever possible, funding is leveraged by transitioning technologies to PE 0603851D, the Environmental Security Technology Certification Program (ESTCP), for certification and by providing funding for Navy participation in ESTCP projects that could address Navy requirements. Within this program element, the project looks for fund leveraging opportunities with Project S0401 and W2210. Execution of this project is coordinated with related Army and Air Force programs by the Tri-Service Environmental Quality R&D Strategic Plan developed under the leadership of the Joint Engineers Management Panel (JEMP). Additional coordination occurs between the Army, Navy, and Air Force centers for environmental excellence.</p> <p>(U) RELATED RDT&E: This project transitions shoreside pollution abatement technologies from two Navy Science and Technology programs and the Strategic Environmental Research and Development Program (SERDP). Project funding is leveraged by transitioning technologies to the Environmental Security Technology Certification Program (ESTCP) for final certification and by providing funding for Navy participation in ESTCP projects. Execution of this project is coordinated with related Army and Air Force programs by the Tri-Service Environmental Quality R&D Strategic Plan developed under the leadership of the Joint Engineers Management Panel (JEMP).</p> <p>(U) PE 0602233N, Readiness, Training, and Environmental Quality Technology Development (U) PE 0603712N, Environmental Quality, Logistics Advanced Technology Demonstrations (U) PE 0603716D, Strategic Environmental Research & Development Program (SERDP) (U) PE 0603851D, Environmental Security Technology Certification Program (ESTCP)</p> <p>C. (U) Acquisition Strategy: This project is categorized as Non-ACAT (Non Acquisition). The project delivers a broad spectrum of products that require a variety of acquisition processes to implement. Equipment products for Naval stations and other mission funded activities costing over 100K are often procured centrally through the Navy Pollution Prevention Equipment Program (PPEP) where as equipment products for Shipyards and other Navy Working Capital Fund (NWCF) activities costing over 100K are procured through their Capital Purchases Program (CPP). For both types of activities, equipment products costing less than 100K, and process changes not requiring the purchase of new equipment such as consumable material or product substitutions, are funded through the activity's operating budgets. Occasionally there is a technology that must be implemented as a specialized facility. These are acquired through the Military Construction (MCON) Program. All these acquisition processes are pursued using a common strategy that satisfies the needs of all the critical stakeholders: 1) Navy end user; 2) Funding sponsor for the Navy end user; 3) Cognizant environmental federal, state, and local regulators; 4) Other stakeholders with cognizance over the Navy process or operation being changed, and 5) The private or government organization that will produce the product.</p>
