

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R2 Exhibit)							February 2006		
BUDGET ACTIVITY 4 - Advanced Component Development and Prototypes			PE NUMBER AND TITLE 0603024A - Unique Item Identification (UID)					PROJECT U02	
COST (In Thousands)	FY 2005 Estimate	FY 2006 Estimate	FY 2007 Estimate	FY 2008 Estimate	FY 2009 Estimate	FY 2010 Estimate	FY 2011 Estimate	Cost to Complete	Total Cost
U02 UNIQUE ITEM IDENTIFICATION (UID)	0	1479	1520	1520	1520	0	0	0	6039
<p>A. Mission Description and Budget Item Justification: The Department of Defense (DoD) vision for unique item identification is to uniquely identify tangible items in order to facilitate item tracking in DoD business systems and provide reliable and accurate technical and financial data for management, financial accountability, and asset management purposes. The policy relies to the maximum extent practicable on commercial item markings and does not impose unique government data requirements. Unique Identification (UID) is a mandatory DOD requirement on all solicitations issued on or after January 1, 2004. UID, or a recognized equivalent, is required for all property items delivered to the Government if: (1) the acquisition cost is \$5,000 or more, (2) it is either a serially managed, mission essential or controlled inventory piece of equipment or a reparable item, or a consumable item or material where permanent identification is required, (3) it is a component of a delivered item, if the program manager has determined that unique identification is required, or (4) a UID or a DOD-recognized UID equivalent is available.</p> <p>The following strategic outcomes have been defined:</p> <ul style="list-style-type: none"> * Data integration across Department, Government, and Industry systems as envisioned by the DoD Business Enterprise Architecture * Improved item management and accountability * Improved asset visibility and life-cycle management * Clean audit opinions on the property, plant, and equipment and operating materials and supplies portions of DoD financial statements <p>The DoD UID focuses first on the requirements for new equipment, major modifications, and re-procurements of equipment and spares. The second phase of implementation will apply the UID policy to existing assets and other business venues including maintenance. This includes the data mining tool which will screen purchase card buys for tangible property and forward these transactions to the applicable property book officer (using the purchase card authorization tool) to ensure the UIDs for these buys have been entered into the UID registry. Unique identification of tangible items will: Help achieve integration of item data across the Department, Federal and industry asset management systems envisioned by the DoD Business Enterprise Architecture (BEA); improve item management and accountability; improve asset visibility and life cycle management; and, enable clean audit opinions on tangible item portions of DoD financial statements.</p>									
Accomplishments/Planned Program						<u>FY 2005</u>	<u>FY 2006</u>	<u>FY 2007</u>	
The unique identifier registry has been deployed. As of 11 January 2006, 264 contractors are providing item unique identifiers allowing the department to individually track 78,964 newly procured items and 11,820 previously procured items. Combined there are 90,784 personal property entries into the registry. Full asset visibility for all functional areas will not occur until all systems from logistics, acquisition, transportation, property management, and financial are enhanced to support item unique identification. The following system enhancements bring the Defense Department closer to achieving full asset visibility. The capability to track government furnished property shipments to contractors has been developed in the wide area workflow system. The unique identifier registry has been enhanced to collect and maintain item unique upgrades or major overhauls effecting the life cycle and or cost of that specific item. The Defense Medical Logistics Support System has been enhanced to support item unique identification. The Plant Clearance and Lost Damaged Destroyed system used by the Defense Contract Management Agency to manage personal property has been redesigned to support item unique identification. The site unique identification registry has been established and is being populated to provide the Department of Defense visibility of real property across the department. FY 2007 and out years will continue with analysis design, development and integration of the unique identification registries.						0	1479	1520

Comment:

D. Acquisition Strategy The Unique Identification (UID) acquisition strategy will make extensive use of Integrated Product Teams (IPTs) consisting of in-house matrix and contract support. The strategy will be accomplished via performance-based acquisition procurement efforts. Spiral software development will be employed through the evolutionary acquisition of time-phased requirements through blocks of capability building on preceding blocks while ongoing to full, interoperable capability. UID must support the near term needs of the acquisition community while achieving the long-term goal of a collaborative business enterprise environment. The evolutionary acquisition approach UID is taking will acquire contractor support and services for program management and integration early in its acquisition life cycle phases. Phased implementation and incremental development will align with the Acquisition Business Enterprise Architecture. Implementation of maturing technology and commercial off-the-shelf software (COTS) will provide the necessary flexibility for building an Information Technology environment to sustain a collaborative business enterprise and achieve the Department of Defense goal for a Global Information Grid (GIG).
