#### Note

The program funding in this Program Element includes overhead reductions that are not intended to impact program content. The efficiencies reductions total \$6.663M in FY12.

Totals include funding for PRCP Program Number 328, SBSS Block 10.

# A. Mission Description and Budget Item Justification

Space Situational Awareness (SSA) is knowledge of all aspects of space related to operations. As the foundation for space control, SSA encompasses intelligence on adversary space operations; surveillance of all space objects and activities; detailed reconnaissance of specific space assets; monitoring space environmental conditions; monitoring cooperative space assets; and conducting integrated command, control, communications, processing, analysis, dissemination, and archiving activities. This program element develops new Air Force sensors, and improved information capabilities for integration across the SSA network; it also includes developmental planning and technology forecasting for future blocks and emerging needs.

A companion program element, 0305940F, Space Situational Awareness Operations, fields, upgrades, operates, and sustains sensors and information integration capabilities within the SSA network. An additional companion program element, 0305614F, JSpOC Mission System, processes surveillance of all space objects and activities, maintains detailed reconnaissance of space assets, fuses space data, maintains awareness of cooperative space assets, and allows JFCC-Space to conduct integrated C2 of space forces.

Development activities are necessary to deploy new advanced sensors capable of finding, fixing, tracking, and reconnoitering the expanding number of debris objects on orbit as well as the increasing number of satellites launched by other nations, of which many are smaller and more capable than previous spacecraft. These

activities are also required to better integrate the disparate elements of SSA in order to enable rapid, responsive space operations. These efforts are in Budget Activity 5, System Development and Demonstration, because they develop new SSA capabilities.

## A. Mission Description and Budget Item Justification

Exhibit R-2A, RDT&E Project Justification: PB 2012 Air Force

Building upon the success of the Space-Based Visible (SBV) technology demonstration, which proved the utility of surveilling orbiting objects from space, the Space-Based Space Surveillance (SBSS) satellite (launched on 25 September 2010) provides the capability to search, detect, and track objects primarily in deep space. It accomplishes this via collecting and processing space object identification and satellite metric data, then communicating it to command and control nodes. Surveillance from space augments existing ground sensors with timely 24-hour, all-weather, all-geography object search capabilities. In conjunction with information from other Space Situational Awareness (SSA) network sensors, SBSS data enables more timely detection and tracking of space objects, particularly those in deep space.

This effort is in Budget Activity 5, System Development and Demonstration, because it is developing a new spacecraft system.

## D. Acquisition Strategy

This system is being acquired via a block approach. Block 10 will develop and field a satellite-based capability to replace the SBV sensor with a capability significantly improving the timeliness of data on objects in deep space. Block 10 was awarded competitively under an option on the existing Mission Area Prime Integrating contract for the space control mission area. The planning portion of the Block 10 contractor ops & interim contractor support effort was previously included in the design, development and risk reduction effort.

### **E. Performance Metrics**

Please refer to the Performance Base Budget Overview Book for information on how Air Force resources are applied and how those resources are contributing to Air Force performance goals and most importantly, how they contribute to our mission.

# A. Mission Description and Budget Item Justification

Accomplishments/Dienned Dreamens (¢ in Millione)

Exhibit R-24 RDT&F Project Justification: PR 2012 Air Force

The Space Fence effort will develop a system of ground-based sensors to replace the aging Air Force Space Surveillance System (AFSSS), a Very High Frequency radar operational since 1961. By using higher radio frequencies in conjunction with radar transmitters and receivers co-located at sites dispersed worldwide, the Space Fence will provide timely detection of smaller orbiting objects, primarily those in low-earth orbit (LEO). As a result, it will greatly expand the uncued detection and tracking capacity of the Space Surveillance Network, from just under 20,000 to up to 100,000 objects, while working in concert with other network sensors.

This effort is in Budget Activity 5, System Development and Demonstration, because it is developing a new system of ground-based sensors.

| B. Accomplishments/Planned Programs (\$ in Millions)  |         |         | FY 2012 | FY 2012 | FY 2012 |
|---|---------|---------|---------|---------|---------|
|   | FY 2010 | FY 2011 | Base    | oco     | Total   |
| Title: Space Fence  | 62.984  | 164.790 | 235.460 | -       | 235.460 |
| <b>Description:</b> Space Fence will release Phase A PDR RFP, satisfy Defense Acquisition Executive (DAE) Milestone A Acquisition Decision Memorandum (ADM) criteria, and contractors will complete their Phase A SDR activities and begin Phase A PDR activities. Space Fence will seek MDA approval to release RFP for final Development, Production and Fielding contract, satisfy entry criteria for Milestone B, and award final contract. |         |         |         |         |         |
| FY 2010 Accomplishments: The three prime contractors completed System Requirements Review (SRR). Government formed high performance team to develop and draft Capabilities Development Document (CDD). Contractors conducted System Design Review (SDR) and demonstrated the prototypes. SDR completed Aug 10.  |         |         |         |         |         |
| FY 2011 Plans: Space Fence will satisfy DAE Milestone A ADM criteria, award follow on contract awards to up to two contractors to continue radar development and prototype activities, to include Preliminary HW/SW Design, and conduct Site Surveys and complete their Pre-CDR Risk Reduction activities.  |         |         |         |         |         |
| FY 2012 Base Plans: Space Fence will seek Milestone Decision Authority (MDA) approval to release RFP for final Development, Production and Fielding contract, and satisfy entry criteria for Milestone B. A Final contract will be awarded for  |         |         |         |         |         |

## **D. Acquisition Strategy**

The Air Force competitively awarded requirements definition contracts for the effort in FY 2006.

The Air Force competitively awarded three (3) Phase A System Design Review (SDR) contracts in June 2009 to Lockheed Martin, Northrop Grumman, and Raytheon. In February 2010, Northrop Grumman was terminated due to insufficient program funding as a result of a \$30M FY10 appropriations conference funding cut. SDR concluded on 10 December 2010. A full and open competition will occur in FY11 for award of up to two contracts through Preliminary Design Review (PDR). A final full and open competition is planned following PDR and MS B to award for final development, production, fielding and sustainment contract. A phased, incremental capabilities approach will deliver Space Fence capabilities that follow the principles of time-certain capability/development and considers user needs and required delivery dates, technology maturity, program risk, and fiscal constraints. Initial Operational Capability (IOC) consisting of capabilities defined in the CDD and notionally consisting of the first radar site and Space Fence Operations Center is desired no later than FY15. The final schedule will be determined in Phase A.

### E. Performance Metrics

Please refer to the Performance Base Budget Overview Book for information on how Air Force resources are applied and how those resources are contributing to Air Force performance goals and most importantly, how they contribute to our mission.

## A. Mission Description and Budget Item Justification

R Accomplishments/Planned Programs (\$ in Millions)

Exhibit R-2A, RDT&E Project Justification: PB 2012 Air Force

Net-centric Sensors and Data Sources efforts migrate the space surveillance network, non-traditional SSA sensors and data sources for use by any entity (primarily the JSpOC) into a net-centric enterprise, enabling more rapid distribution of data to the warfighter based on an AFSPC provided prioritization list. This effort will define and implement the technical architecture, and support the concept to provide the foundational data necessary to enable rapid, responsive decisions by the Commander, US Strategic Command's Joint Functional Component Commander for Space and other national capability users to detect, evaluate, attribute space events. This effort builds upon and operationalizes the successful Extended Space Sensor Architecture Advanced Concept Technology Demonstration (ESSA ACTD) and prototypes how disparate and legacy space sensor network data can be translated into a net-centric operating environment. Data will be exposed as defined by published DoD and community interface standards to ensure technical interoperability.

These efforts are in Budget Activity 5, System Development & Demonstration, because they develop and demonstrate capabilities for better integration of SSA data.

| B. Accomplishments/Planned Programs (\$ in Willions)  |         |         | FY 2012 | FY 2012 | FY 2012 |
|---|---------|---------|---------|---------|---------|
|   | FY 2010 | FY 2011 | Base    | oco     | Total   |
| Title: sensor & data integration & exposure   | 14.489  | 23.207  | 5.982   | -       | 5.982   |
| <b>Description:</b> Providing Data Exposure and Data Source Integration Net-Centrically for consumption and use by the JSpOC and other users  |         |         |         |         |         |
| FY 2010 Accomplishments: Research and analysis for sensor data source roadmapping; traditional / non-traditional SSA sensor and data source exposure, including net-centrically exposing data from GEODSS-Socorro and Milstone sensors (traditional); ESIS & Red Cloud (non-traditional) sensors as well as the following data sources: SAGE, MCRS, and MIDB  |         |         |         |         |         |
| FY 2011 Plans: Research and analysis for sensor data source roadmapping; continuation of traditional / non-traditional SSA sensor and data source exposure to include net-centrically exposing data from GEODSS-Maui, GEODSS-Diego Garcia & Eglin (traditional) as well as TPY-2 (non-traditional) sensors and the following data sources: Road Bed & Wrangler; also complete Blue Force Status Pilot for WGS and Begin BFS for GPS |         |         |         |         |         |
| FY 2012 Base Plans:   |         |         |         |         |         |

# D. Acquisition Strategy

FY 2012 OCO Plans:

Sensor and data sources activities utilize existing engineering and study contracts and a competitively selected system engineering team. Sensor integration focus is on supporting the migration of the space surveillance network sensors, non-traditional sensors and data sources to a net-centric architecture based on an AFSPC provided prioritization list. The systems engineering team will provide high-level technical oversight support and assist in the proper execution of data exposure.

### Note

SST was an FY10 New Start, however, all FY10 funds were subsequently removed by a Congressional Mark. Therefore, FY11 will be the only year in which program funds are allotted.

## A. Mission Description and Budget Item Justification

Exhibit R-2A RDT&F Project Justification: PB 2012 Air Force

The Space Surveillance Telescope (SST) is a Defense Advanced Research Projects Agency (DARPA) program to develop an advanced ground-based optical system to enable detection and tracking of faint objects in deep space, while providing rapid, wide-area search capability. After demonstrating the successful application of state-of-the-art optical, curved charge couple device (CCD) and large telescope control technologies AFSPC will conduct a Military Utility Assessment (MUA). This budget item funds the delivery, evaluation and completion of developmental technical data in order to establish a complete technical baseline of the as-built system, required to operate and support the capability long-term. The SST system will become a contributing Space Surveillance Network sensor during the MUA and a dedicated sensor upon completion of the MUA.

## D. Acquisition Strategy

This project transitions the SST system, located at White Sands Missile Range, Socorro, New Mexico, from DARPA to the Air Force. It will enable the Air Force to support the system and conduct the MUA beginning in FY11 by obtaining and completing technical baseline documentation available from the DARPA development effort and leverage the significant (~\$90M) DARPA investment to date in this effort.

## **E. Performance Metrics**

Please refer to the Performance Base Budget Overview Book for information on how Air Force resources are applied and how those resources are contributing to Air Force performance goals and most importantly, how they contribute to our mission.

## A. Mission Description and Budget Item Justification

Exhibit R-2A. RDT&E Project Justification: PB 2012 Air Force

Space Situational Awareness Environmental Monitoring (SSAEM) continues the key space environment measurements of the Defense Meteorological Satellite Program (DMSP) program de-manifested from the planned next generation weather program. These measurements are critical inputs to the nation's space environment analysis and forecasting models supporting the pervasive nature of space environmental support to all aspects of SSA, offensive and defensive space control, GPS accuracy assurance, system anomaly resolution, attribution and responsive actions, and force protection from communication outages/degradation modulated by solar activity. SSAEM includes the fielding of a space-based sensing capability to gather space environment measurement data, developing and procuring sensors, and providing launch and mission assurance. Based on the results of the Alternatives Analysis, SSAEM is pursuing a partnership with the National Oceanic and Atmospheric Administration (NOAA) in the Constellation Observing System for Meteorology, Ionosphere and Climate (COSMIC 2) program or rideshare to host key space weather sensors. SSAEM will fund risk reduction efforts for space sensors by leveraging existing prototypes, operational systems and Joint/Advanced Concept Technology Demonstrations (JCTDs/ACTDs). SSAEM will seamlessly integrate into the overall SSA mission, comply with net-centricity requirements, and provide timely critical decision making data to the SSA battlespace management infrastructure.

## D. Acquisition Strategy

Studies have been conducted to determine the optimum strategy for acquiring space-based environmental data sources resulting in a decision to partner with the National Oceanic and Atmospheric Administration (NOAA) in the COSMIC 2 program or rideshare to host SSAEM sensors. Existing sensors with high Technology Readiness Levels (TRL) will be leveraged and technology modernization of SSAEM sensors will be performed by AFRL. The operational SSAEM sensors will be acquired through competitive contract awards. Part of the AF commitment to the Cosmic 2 partnership may require the procurement of launch vehicles through the Space Development Test Wing (SDTW).

### E. Performance Metrics

Please refer to the Performance Base Budget Overview Book for information on how Air Force resources are applied and how those resources are contributing to Air Force performance goals and most importantly, how they contribute to our mission.

#### Remarks

Sensor development work is currently split between AFRL in Albuquerque, NM, the University of Texas at Dallas, SRI International in Menlo Park, CA, and ITT in North Amityville, NY.

## Schedule Details

|   | St      | End  |         |      |
|---|---------|------|---------|------|
| Events  | Quarter | Year | Quarter | Year |
| Prliminary Design Review - VIDI Sensors               | 2       | 2011 | 3       | 2011 |
| Critical Design Review - VIDI Sensors - contractor #1 | 3       | 2011 | 3       | 2011 |
| Preliminary Design Review - RF Beacon Sensor          | 3       | 2011 | 3       | 2011 |
| MS B  | 3       | 2011 | 3       | 2011 |
| Critical Design Review - RF Beacon Sensor             | 4       | 2011 | 4       | 2011 |
| Critical Design Review - VIDI Sensors - contractor #2 | 2       | 2012 | 2       | 2012 |
| MS C  | 3       | 2012 | 3       | 2012 |
| Sensor Delivery - all sensors                         | 2       | 2013 | 2       | 2013 |
| Launch/Deployment of first sensor package             | 2       | 2014 | 2       | 2014 |
| Initial Operating Capability                          | 2       | 2015 | 2       | 2015 |
