A. Mission Description and Budget Item Justification

The LPD-17 Class ships are functional replacements for 41 ships of four classes of amphibious ships. These new ships embark, transport, and land elements of Marine landing forces in an amphibious assault by helicopters, landing craft, and amphibious vehicles. Tactics, techniques, and tools for naval expeditionary warfare continue to evolve. The LPD-17 Class configuration must continue to adapt to this evolutionary process as theses ships are expected to be in service until almost 2050. The LPD-17 design includes system configurations that reduce operating and support costs and facilitate operational performance improvements. The RDT&E,N funding will be used for system engineering and integration efforts to resolve obsolescence issues facing the LPD-17 Class components, as well as develop further reductions in life cycle costs, and will integrate performance upgrades in a rapid, affordable manner. These efforts will result in well-defined specifications and drawings in system integration design packages that provide technical baselines for follow-on ship procurements. This program is funded under Engineering and Manufacturing Development because it encompasses engineering and manufacturing development of new end-items prior to production approval decision. LSD(X) moved to RDT&E,N PE 0603564N Project 2474 starting in FY12 and out.

A. Mission Description and Budget Item Justification

The LPD-17 Class ships are functional replacements for 41 ships of four classes of amphibious ships. These new ships embark, transport, and land elements of Marine landing forces in an amphibious assault by helicopters, landing craft, and amphibious vehicles. Tactics, techniques, and tools for naval expeditionary warfare continue to evolve. The LPD-17 Class configuration must continue to adapt to this evolutionary process, because these ships are expected to be in service until almost 2050. The LPD-17 design includes system configurations that reduce operating and support costs and facilitate operational performance improvements. System engineering and integration efforts that began in FY 1997 will develop further reductions in life cycle costs and will integrate performance upgrades in a rapid, affordable manner. Possible improvements include advanced sensors, advanced computers, advanced command and control software, advanced information systems technologies, and ship based logistics concepts. Cost reduction and improved performance will be accomplished through sustained modeling and simulation efforts, continued personnel reductions efforts, system performance tradeoff evaluation, and naval expeditionary warfare systems engineering. Feedback from the operational forces for integrating system configurations will be accomplished through the Naval Expeditionary Warfare Centers in Quantico, Dahlgren, China Lake, Naval Research Lab, and Little Creek, Virginia. These efforts will result in well-defined specifications and drawings in system integration design packages that provide technical baselines for follow-on ship procurements. LSD(X) moved to RDT&E,N PE 0603564N Project 2474 starting in FY2012 and out years.

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)	FY 2012	FY 2013	FY 2014
Title: Systems Engineering/Integration	0.858	0.824	1.214
Articles:	0	0	0
Description: Continuing Naval Expeditionary Warfare Systems Engineering efforts and integration efforts for unique LPD 17 Class systems, including efforts to resolve obsolescence issues impacting the class.			
FY 2012 Accomplishments: Completed Probability of Raid Annihilation (PRA) Testbed Development. Completed the training system process and GAP Analysis to identify and validate manpower and training, USMC Communication Exercise Support, LPD 17 Joint Interoperability Test Command (JITC) Certification/OPEVAL Support, Follow-on Operational Test and Evaluation (FOT&E) MARCORSYSCOM

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each) FY 2012 FY 2013 FY 2014 Support, Advanced Enclosed Mast/Sensor (AEM/S) Access Study, and Radar Cross-section Reduction (RCSR) Testing of Motor Gasoline (MOGAS) Rack. FY 2013 Plans: Continue the Reliability and Obsolescence studies for shipboard network/electronics/machinery systems, and Environmental Qualification Testing (EQT) for obsolescence replacements. Start Windows 7/ Operating System Migration feasibility study, and MK 46 Gun Weapon System (GWS) Reliability and Interoperability study. FY 2014 Plans: Continue Reliability and Obsolescence studies for Mission System (Hanger Bridge Crane, Improved Flight Deck Ramp Closures and CPP software/wiring studies) as well as Windows 7 Operating System migration feasibility studies. EQT is also required for new Electromagnetic Pulse/Electromagnetic Interference (EMP/EMI) cable. Ship Wide Area Network (SWAN) Switch and server cabinets, Navigational Data Distribution System (NDDS) cabinet, Ship Control System (SCS) workstation/computer, and Magnetic Signature Control System (MSCS) Bipolar Amplifier Unit (BPAU). SWAN Hull, Mechanical, and Electrical (HM&E) as a part of integrating Consolidated Afloat Networks and Enterprise Services (CANES) into the LPD-17 Class.
