The FY 2015 OCO Request will be submitted at a later date.

Note

Beginning in FY15 the Space Range (64A007) content and funding was transferred to PE 0606116F, Space Test and Training Range Development.

A. Mission Description and Budget Item Justification

This program supports a range of activities including technology planning, development, demonstrations and prototyping, as well as modeling, simulations and exercises to support development of tactics and procedures in the Space Control mission area. The types of Space Control activities accomplished are Space Situational Awareness (SSA), Defensive Counterspace (DCS), Offensive Counterspace (OCS) and Command and Control (C2) and Battle Management. For use in the Space Control mission area, SSA includes monitoring, detecting, identifying, tracking, assessing, verifying, categorizing, and characterizing, objects and events in space and includes terrestrial based space capabilities. DCS includes defensive activities to protect U.S. and friendly space-systems assets, resources, and operations from enemy attempts to negate or interfere and prevention activities that limit or eliminate an adversary's ability to use U.S. space systems and services for purposes hostile to U.S. national security interests. OCS activities disrupt, deny, degrade or destroy space systems, or the information and the technology they provide, which may be used for purposes hostile to U.S. national security interests. Command & Control efforts include identifying technology solutions to enable fusion of data for use in multi-level security environments, and near-real-time data delivery and decision support to war fighter needs. This program supports the development of Rapid Reaction Capabilities in response to immediate warfighter needs, including Urgent Operational Needs (UONs) and Joint Urgent Operational Needs (JUONs), in the Space Control mission area.

Funding also supports the development of the technology and infrastructure for space control elements in a live signal environment of the Space Test and Training Range (STTR). This includes development and demonstration of first-ever test assets, special test equipment, capabilities and systems required to test, validate, and verify performance of integrated space control systems. Additionally, this program supports the development of test range assets required to support developmental and operational test, exercises, training, and tactics development for space control systems in the face of an emerging threat. A collaborative command & control capability will be integrated into several range systems to provide real time communications during test event scenarios to enable operators to be better prepared prior to deploying into the AOR.

These projects are in Budget Activity 4, Advanced Component Development and Prototypes (ACD&P) because efforts are necessary to evaluate integrated technologies, representative modes or prototype systems in a high fidelity and realistic operating environment.

# The FY 2015 OCO Request will be submitted at a later date.												
A. Mission Description and Budget Item Justification												
This project supports a range of activities including technology planning, development, demonstrations and prototyping, and testing, as well as modeling, simulations and exercises to support development of tactics and procedures for a responsive and resilient Space Control mission area. This includes technology development and prototyping for Space Situational Awareness (SSA), Defensive Counterspace (DCS) and Offensive Counterspace (OCS). Specifically supported are OCS activities which include disruption, denial, or degradation of adversary space systems, or the information they provide, which may be used for purposes hostile to U.S. national security interests. Rapid Reaction Capabilities in response to immediate warfighter needs in the Space Control mission area are developed within this program.												
B. Accomplishments/Planned Programs (\$ in Millions)										FY 2013	FY 2014	FY 2015
Title: Rapid Reaction Branch (RRB)										3.645	3.560	6.075
Description: Develops advanced capabilities for rapid prototyping and integration into space control programs of record and, if requested, to warfighter Urgent Operational Needs (UONs) and Joint Urgent Operational Needs (JUONs). Conducts prototyping, demonstration, testing, and rapid transition of technology and techniques to space control systems.												
FY 2013 Accomplishments: Developed and tested quick reaction capabilities for rapid prototyping and integration into space control programs of record.												
FY 2014 Plans: Developing and testing quick reaction capabilities for rapid prototyping and integration into space control programs of record.												
FY 2015 Plans: Develop and test quick reaction capabilities for rapid prototyping and integration into space control programs of record. Complete Multi-Mission Processor (MMP) increment 2 prototype and purchase initial equipment required for final integration and assembly. Support final test to confirm existing and new capabilities on the increment 2 MMP.												
Title: Responsive, Resilient Space Architecture Support										-	1.974	-
Description: Assist space control programs to develop increasingly responsive, resilient and affordable capabilities via architectures emphasizing hostable payloads, small satellites, interface standards and government/commercial hosting opportunities.

# The FY 2015 OCO Request will be submitted at a later date.												
Note Beginning in FY 2015, all Space Range content and funding is transferred to PE 0606116F, Space Test and Training Range Development												
A. Mission Description and Budget Item Justification This project supports the development of Space Test and Training Range (STTR) capabilities required to support developmental and operational test, training, exercises and tactics development for Space Control systems and related architecture. This includes development, demonstration and delivery of test assets, special test equipment, capabilities and systems required to test, validate, and verify performance of integrated space control systems. The objective of the STTR is to provide a safe, secure, controllable and repeatable environment for the testing and training of Space Control mission systems and operators that is both realistic and relevant. Additionally, this program supports the development of test range assets required to support developmental and operational test, exercises, training, and tactics development for Air Force and Joint-service space control systems/units. Included are both the fixed node Space Range Operation Center (SROC) at Schriever AFB and a deployable capability to support complex Joint and AF exercises. A space range Family of Systems (FoS) called Big Top is being developed to accomplish the STTR mission. The Big Top objective is integration into a Distributed Mission Architecture, tying into both the Information Operations (IO) and Air ranges for increased realism and complexity. This technology will allow for the first-ever use of a realistic signal environment to increase the realism and efficiency of space control squadron training. Satellite bandwidth is leased in this program for use in support of live testing and training events.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2013	FY 2014	FY 2015	
Title: Range Control									15.670	15.019	-	
Description: Development and acquisition of mobile, transportable, and fixed range monitoring and communications capabilities for the space range.												
FY 2013 Accomplishments: Completed operational acceptance of both initial Space Range Operations Center (iSROC) and Signal Monitoring Unit (SMU) to meet STTR IOC criteria. Finalized and delivered Space Center Scheduling Enterprise (S-CSE) Spiral-2 for Operational Test and Acceptance. Continued execution of SROC Spiral-1 upgrades. Conducted pre-contract award activities for "Big Top" range family of systems contract for capability development of world-wide distributed capability, analysis and scoring toolsets, scripted scenarios, with emulation and playback capability. Transferred Government Furnished Equipment prototypes to sustainable capabilities.												
FY 2014 Plans:
