| <b>10. Description of Proposed Construction:</b><br>Constructs a steel-framed hangar with steel roof deck supported by structural steel beams and trusses and shallow concrete footings. Walls will be precast concrete and ribbed insulated metal panel. The hangar bay floor will be slab on grade with embedded grounding grid and trench system. The facility provides one bay for aircraft depaint operations, one bay for paint operations, support spaces, storage, hazardous material storage, administrative areas and equipment storage. |                                              |                           |                                              |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                              |                           |                                              |                        |

Program Element<br>0202176M                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 6. Category Code<br>21103                    | 7. Project Number<br>P946 | 8. Project Cost (\$000)<br>66,100            |                        |
| <p>Constructs a parking facility to provide approximately 130 parking spaces. The parking facility will be open air, cast in place concrete with an elevated parking deck and an asphaltic concrete ground level. Exterior will be painted finished concrete and extruded metal infill grid panels. Concrete masonry unit walls will enclose an electrical room and stairs. Concrete columns will be supported by concrete pile caps on precast piles.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with Department of Defense Minimum Anti-Terrorism Standards for Buildings.</p> <p>The built-in equipment for the corrosion control hangar includes Aqueous Film Forming Foam (AFFF) fire suppression system, two monorail cranes (3-ton), and paint booth equipment.</p> <p>Special costs include post construction contract award services (PCAS). Special costs also include gross receipts tax, geospatial survey and mapping, archeological monitoring, and enhanced commissioning.</p> <p>Operations and maintenance support information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes earthwork in preparation for construction and removal of contaminated soil.</p> <p>Special foundation features include precast piles for the parking facility.</p> <p>Paving and site improvements include airfield pavement and shoulder, access roads, approximately six parking spaces (in addition to the parking facility), curbs, sidewalks, trash enclosures, retaining walls, landscaping, security fencing with vehicular and personnel gates, patching and restriping of an existing parking lot, and demolition of asphalt pavement and fencing.</p> <p>Electrical utilities include secondary electrical distribution, pad-mounted</p> |                                              |                           |                                              |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                              |                           |                                              |                        |

Project Title<br>Corrosion Control Hangar |                        |
| 5. Program Element<br>0202176M                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 6. Category Code<br>21103                    | 7. Project Number<br>P946 | 8. Project Cost (\$000)<br>66,100            |                        |
| <p>transformers, area lighting and telecommunication/local area network. An existing photovoltaic array located on the parking facility site will be relocated.</p> <p>The existing corrosion control hangar #5069 (1637 M2) will be demolished upon completion of this project as the functions it houses now will be relocated to the new corrosion control hangar.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facilities Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                              |                           |                                              |                        |
| <b>11. Requirement:</b> <u>7,342 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs a new aircraft stripping and painting facility for Marine Aviation Logistics Squadron 24 (MAL5-24) and Fleet Readiness Center Southwest (FRCSW) Detachment Kaneohe Bay.<br><br>Constructs parking facilities to support personnel working at the corrosion control hangar and other facilities in the area.<br><b>(New Mission)</b><br><b>REQUIREMENT:</b><br>A facility is required for paint preparation and painting to support the maintenance of H-1, H-60, CH-53 and MV-22 series aircraft.<br><br>Parking facilities are required to serve personnel working at the hangar and at other facilities in the area, to replace parking areas that violate minimum AT/FP standoff distances, to comply with physical security requirements restricting vehicle access to flightline, and to address pedestrian safety concerns.<br><b>CURRENT SITUATION:</b><br>MAL5-24 and FRCSW inspect aircraft and conduct depot-level preventative maintenance in Hangar #5069, including painting and stripping. It was designed and built in 1990 for general F/A-18 corrosion control and does not have sufficient height clearance to allow MV-22s to rotate their nacelles. It was not designed for plastic media blast (PMB) operations and does not provide proper air filtration and volatile organic compound (VOC) control measures. Ongoing maintenance issues with the hangar contribute to an average delay of four workdays per aircraft undergoing strip and paint. |                                              |                           |                                              |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                           |                                              |                        |

| <p>Major issues are as follows:</p> <ul style="list-style-type: none"> <li>- AFFF system is degraded and has inadvertently activated on numerous occasions. Incremental repairs to the system have been unsuccessful. System is currently turned off.</li> <li>- Water-based fire suppression system has erroneously activated on several occasions. System currently only turned on when aircraft are in the hangar.</li> <li>- Intermittent hangar door failures due to internal corrosion and wear.</li> <li>- Two large roof exhaust fans currently non-operational.</li> <li>- Plastic media and paint can enter the drainage system.</li> <li>- Inadequate overhead lighting to perform strip and paint.</li> <li>- Inoperable breathable air ports for use with respirators.</li> <li>- Ventilation control system malfunctions.</li> <li>- Portable PMB booth requires extensive maintenance to maintain in operational status.</li> <li>- No capability to recycle plastic media. Each aircraft utilizes between 8-12 barrels of media (approximately \$1,500 per barrel and \$400 disposal per barrel).</li> </ul> <p>The flight line south area where the hangar will be located has a significant deficit of parking for the personnel working in the hangars and surrounding facilities. This zone has very little unconstrained open space, and existing open areas are committed to future projects, training, or other support activities. The zone has a requirement of approximately 1,259 spaces, but only 863 spaces are available. Several designated parking areas do not meet the required AT/FP standoff distances to adjacent buildings and are located within the flightline restricted area. Lack of sidewalks and heavy traffic conditions put service members at risk during the long walk between hangars and existing parking.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>If the corrosion control hangar is not provided, MALS-24 and FRCSW will continue to utilize an existing hangar that cannot accommodate PMB paint stripping. Additionally, the delays associated with the lack of adequate facilities will contribute to a reduction in readiness of the aircraft due to the inability to efficiently conduct maintenance at MCAS Kaneohe Bay. Corrosion is the number one depot induction discrepancy and will continue to be an issue as aircraft deploy to corrosive marine environments throughout the world. As the aircraft inventory ages, it will become increasingly important to prevent and treat corrosion for continued service.</p> |                                              |                           |                                              |                        |

| If the parking facility is not provided, personnel will continue to be exposed to unnecessary risk as pedestrians in high traffic areas. Current parking facilities are inadequate and lead to inefficiencies that adversely impact aircraft and mission readiness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                              |                           |                                              |                        |                  |                  |                  |  |                     |               |                     |                     |                      |       |      |    |                                |     |      |     |                      |     |      |    |

| <b>JOINT USE CERTIFICATION:</b><br>The Director Land Use and Military Construction Branch, Installations and Logistics Department, Headquarters Marine Corps certifies that this project has been considered for joint use potential. Unilateral Construction is recommended. Mission requirements, operational considerations, and location are incompatible with use by other components.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                              |                           |                                              |                        |                  |                  |                  |  |                     |               |                     |                     |                      |       |      |    |                                |     |      |     |                      |     |      |    |

| Homeport for approximately 40 surface combatants and submarines. This station operates and controls the harbor and maintains and operates shore-based support facilities such as shore intermediate maintenance, housing, recreation, and personnel assistance for afloat surface units and most of the shore tenant activities in the Pearl Harbor area. |                                              |      |      |          |     |                                                       |                        |                                     |                |                  |

Category Code<br>84210             | 7. Project Number<br>P169 | 8. Project Cost (\$000)<br>78,320           |                        |
| <p>performance and sustainable building requirements will be included in the design and construction of the project in accordance with Federal Laws and Executive Orders. Low Impact Development (LID) will be included in the design and construction of this project as appropriate.</p> <p>Special foundation features include piles.</p> <p>Paving and site improvements include a steel bridge crossing at Waiawa Stream.</p> <p>Demolition includes the removal of portions of the existing water transmission lines, vaults, and other related appertenances.</p> <p>Land acquisition includes acquiring the sufficient rights and interest of land along the length of the new water transmission lines. It also includes the disposal of easements no longer needed once the existing transmission line is removed from service.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                       |                           |                                             |                        |
| <p><b>11. Requirement:</b>                      <b>Adequate:</b>                      <b>Substandard:</b></p> <p><b>PROJECT:</b></p> <p>Constructs a new primary potable water transmission line from the Waiawa Pump Station to an existing water line at the intersection of Lehua Avenue and Second Street (Pearl City Junction) and a secondary line to the Manana Housing pump station to replace the deteriorated existing pipeline.</p> <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>Primary and secondary water transmission lines are required to provide water for potable, industrial, and fire protection needs for Joint Base Pearl Harbor Hickam (JBPHH) and military family housing. The lines should be located to provide maintenance access.</p> <p><b>CURRENT SITUATION:</b></p> <p>The existing 60+ year old water transmission line is at the end of its design life and is extremely deteriorated. Portions of the line cannot be maintained because a multi-level shopping center parking structure and several warehouses have been built over it. The line provides 83% of all</p>                                |                                       |                           |                                             |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                              |                           |                                             |                        |

| <p>fresh water requirements at JBPHH. It also serves the Halawa water storage tanks, which provide 87% of the required fire protection and potable water storage requirements for JBPHH.</p> <p>There is no redundant transmission line to allow continued use of the Waiawa pump station in the event of a rupture in the existing line. The secondary pump stations at Red Hill and Halawa do not have the capacity to meet prolonged daily demands if transmission from Waiawa is interrupted.</p> <p>This project is not located in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The existing transmission line will continue to deteriorate, increasing the risk of a rupture. A rupture will severely impact the supply of water at JBPHH, resulting in severe water restrictions for all shore tenants, industrial users including the Navy Shipyard, family housing, and berthed ships and submarines. All non-dockside fire protection at JBPHH, including fire hydrants and sprinkler systems, would be affected. A rupture beneath the shopping center parking structure or a warehouse could result in significant property damage and risks to life safety.</p> |                                              |                           |                                             |                        |

| Portsmouth Naval Shipyard's primary mission is the overhaul, repair and modernization of Los Angeles-class and Virginia-class submarines. Portsmouth Naval Shipyard provides the U.S. Navy's nuclear powered submarine fleet with quality overhaul work in a safe, timely and affordable manner. This includes a full spectrum of in-house support--from engineering services and production shops, to unique capabilities and facilities, to off-site support--all of which serves the multifaceted assortment of fleet requirements. |                                              |     |      |              |                                                       |                      |                |                                     |     |                  |

| <p>Constructs new portal crane rail and modernizes existing portal crane rail to support new high-capacity portal crane for reactor servicing requirements at Dry Dock (DD) #1. Provides crane rail, switches and frogs, crane heater circuits, and all appurtenances required to accept, load test, and operate the heavy-lift portal crane. Project includes deep foundations.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Special costs include Post Construction Contract Award Services (PCAS) and</p> |                                              |                            |                                              |                        |

| <p>a shipyard factor.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Special construction features include underground maintenance access tunnel to DD#1 and a shipyard factor.</p> <p>Site preparation includes grading for crane rail.</p> <p>Paving and site improvements include a new train rail and modifies existing train rail to support rail cars for refueling operations. Provides rail, foundations, switches and frogs, and all appurtenances required for operation.</p> <p>Electrical utilities include a new substation, electrical distribution system, and electrical utilities required for refueling nuclear submarines. Provides cabling, enclosures, and equipment necessary for power to DD#1 and Berths 1 and 2; and pier lighting at Berths 1 and 2.</p> <p>Mechanical utilities includes relocation of underground utilities and potable water and drainage.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions for satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                            |                                              |                        |

Category Code<br>22330                    | 7. Project Number<br>P1074 | 8. Project Cost (\$000)<br>39,725            |                        |                                                     |         |                                                          |         |                           |         |                                            |    |
| <p><b>REQUIREMENT:</b></p> <p>The 688 Class SLEP requires a new high-capacity portal crane with crane rail infrastructure to provide heavy-lift access to the DD#1 reactor servicing complex, utility upgrades and modifications, and railroad modifications to perform refueling at DD#1. A high-capacity crane spur test area is also required for crane acceptance testing, load testing for shipyard certification, and special purpose testing and certification for nuclear lifts.</p> <p>To meet Fleet need-by date, construction completion is required by August 2020 in order to test and certify the rail system prior to the crane delivery in October 2020. New portal crane requires one year of general purpose service prior to special purpose service certification.</p> <p><b>CURRENT SITUATION:</b></p> <p>Portsmouth Naval Shipyard (NS) does not currently have the facilities to support the 688 Class SLE mission requirements as they relate to portal crane service and dockside utilities at DD#1 and adjacent berths.</p> <p>The 688 Class SLEP mission at DD#1 requires heavier lifts and new dockside utilities not previously necessary. The new heavy-lift portal crane will have a longer wheel base, requiring additional track length for traveling and staging. It will also require track with increased wheel-load capacity for operations and testing and additional power requirements to support the mission.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>This project is an integral part of the 688 Class SLEP and the mission cannot be achieved without the infrastructure provided by this project. Failure to coordinate with adjacent projects will greatly increase the risk of cost growth, construction complications, and timely completion to support the Fleet need-by date.</p> <p>Refueling requires the acquisition of a portal crane to be delivered by FY 2020. The existing crane rail does not have the capacity to support this new portal crane, therefore Portsmouth NS cannot accept delivery without the new crane rail in place.</p> |                                              |                            |                                              |                        |                                                     |         |                                                          |         |                           |         |                                            |    |

| <p>Renovates Dry Dock #1 (DD#1) by constructing a superflood basin at the dry dock entrance. The superflood basin is similar to a navigational lock, and will enable Los Angeles (LA) Class and Virginia (VA) Class submarines to dock without the use of buoyancy assist tanks. Project will construct a basin closure wall with caisson seat; modify and reuse DD#3 caisson gate; provide additional superflood pumping capacity; extend the pier at the end of Berths #1 and #2 to reach the closure wall; modify Berths #1 and #11 to mitigate water exfiltration and prevent overtopping; dredge within the basin area; modify DD#1 to prevent overtopping; and protect the utility galleries inside DD#1 from water infiltration. Berthing fixtures, utility extensions and lighting will be included.</p> |                                              |                           |                                                  |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                              |                           |                                                  |                        |

| <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Special costs include Post Construction Contract Award Services (PCAS), shipyard factor and compressed schedule.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Special construction features include crane rail extension and Berth #2 fendering.</p> <p>Site preparation includes soil disposal from Berths #1 and #2.</p> <p>Special foundation features include micropiles.</p> <p>Paving and site improvements include grading, repaving and site restoration at Berths #1 and #2, bituminous concrete demolition and dredging. Also includes relocation and improvements to capstans, mooring, fendering, and line handling appurtenances.</p> <p>The project will require cultural resources and environmental mitigation associated with existing historical features, in-water construction, dredging, and soil disposal.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions for satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                  |                        |

| <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>Adequate dry dock facilities are required to perform depot level maintenance on nuclear powered submarines. This work includes the overhaul, repair, modernization, and inactivation of LA class submarines. As one of only four active shipyards in the country, the three dry docks at Portsmouth Naval Shipyard (PNSY) continuously operate at full capacity.</p> <p>Due to the Fleet moving from the LA Class to the VA Class, PNSY requires the ability to support two VA Class and one LA Class simultaneously through 2031. Dry Docks #2 and #3 can support work on the VA class, but DD#1 can only accommodate LA class submarines at this time. As a result, DD#1's schedule will continue to be fully-loaded with all forms of LA class.</p> <p><b>CURRENT SITUATION:</b></p> <p>DD#1 is the shallowest of the three dry docks at PNSY and requires a buoyancy assist system during docking and undocking of LA class submarines. The existing buoyancy assist system utilizes large floodable air-filled tanks that are 40+ years old and are beyond repair and will be decertified in 2021.</p> <p>Replacement in kind is impractical due to operational risks and productivity losses caused by severe tide constraints and buoyancy tank installation, removal and storage. Furthermore, replacement tanks must be customized for the weight and configuration of LA class submarines and would incur extremely high production costs for a very short service life. They could not be used on the VA class in the future, and would therefore be rendered obsolete when LA class submarines are removed from service in 2031.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>DD#1 will not support submarine evolutions beyond 2021 and the Navy will lose a dry dock essential to the maintenance and overhaul of nuclear submarines.</p> |                                              |                           |                                                  |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |

| Marine Corps Air Station Cherry Point supports and enhances the combat readiness of 2nd Marine Aircraft Wing units and other Department of Defense units while improving the quality of life for military personnel, their families, and work force assigned to the Air Station. The Air Station maintains facilities and property, provides security and other services, and operates the airfield in support of tenant units and other forces training/preparing for combat in order to deter, prevent, and defeat threats and aggression aimed at the United States. |                                              |                      |                 |                                                 |                |                                    |                        |                  |       |       |

| <p>stations, alarm systems, communication connections at aircraft parking locations, seismic construction, explosive material storage areas, heating, ventilation and air conditioning, sound attenuation and vaults.</p> <p>Project also constructs a paraloft facility.</p> <p>This project will provide Anti-Terrorism/Force Protection (ATFP) features and comply with ATFP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. Project will also provide security enhancements/access control elements for personnel and equipment access between the installation and the more secure flightline/hangar area. These flightline security upgrades will address flightline access control requirements for vehicle access and turn-stiles. Security enhancements for each of the flightline facilities including security fencing, a pedestrian gate and a vehicle gate, and cameras in the duty room, the second floor security office, and the air maintenance office.</p> <p>Built-in equipment includes two overhead bridge cranes (5-ton), two two-stop personnel/freight elevators, emergency generator, access flooring, welding hood, high density storage systems in tool rooms, fire protection booster pump, sprinklers for shops and storage, and Aqueous Film-Forming Foam (AFFF) system.</p> <p>Special costs include Post Construction Contract Award Services (PCAS), including geospatial surveys and mapping and enhanced building commissioning.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes site clearing, excavation and demolition to prepare for construction.</p> <p>Special foundation features include auger cast pile foundation for the hangar and the paraloft.</p> |                                              |                           |                                                 |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                       |                           |                                                 |                        |

| <p>Paving and site improvements include an aircraft washrack, grading, paving, curbs, sidewalks, landscaping, security fencing, covered hazard material storage area, outside lighting, trash enclosure, and storm-water management. Concrete patchwork will be completed where existing buildings will be demolished. Project includes taxiway remarking and the renovation to existing aircraft parking aprons in order to provide electrical grounding, work station kiosks and sun shades.</p> <p>Electrical utilities include primary and secondary distribution systems, 400 HZ power with 270 DC converter, lighting, transformers and telecommunications infrastructure.</p> <p>Mechanical utilities include natural gas and water supply lines, storm, sanitary and industrial sewer lines, oil/water separator and AFFF collection system.</p> <p>Environmental mitigation includes contaminated soil removal and active vapor intrusion mitigation system for building floor slabs.</p> <p>Demolition includes the following facilities: Facility #130 (134866 SF), Facility #1700 (50810 SF), Facility #1701 (61610 SF), Facility #140 (11108 SF), Facility #3745 (5097 SF), Facility #4553 (8964 SF), Facility #4434 (675 SF), Facility #4435 (630 SF), Facility #4437 (839 SF), Facility #4438 (477 SF), Facility #4439 (531 SF), Facility #3984 (72 SF), Facility #3985 (72 SF), Facility #4858 (1200 SF), Facility 209545 (7695 SF). All facilities are being demolished to clear the site for this project.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facilities Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                       |                           |                                                 |                        |

| <p>Adequate and properly configured operational and maintenance facilities are required to support the basing of the F-35B Lightning II. The two module maintenance hangar is required to provide weather-protected shelter for the servicing and repair of aircraft at the organizational level and emergency shelter for inoperable aircraft. This hangar will support two F-35B squadrons planned for arrival beginning in early FY2023. Construction in FY2019 is required to allow enough time for completion of construction, and post construction outfitting and security certification.</p> <p><b>CURRENT SITUATION:</b></p> <p>There are no existing hangars that can support the requirements of the F-35B aircraft.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>If this project is not provided, the station will be unable to support the planned basing of F-35 squadrons.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                              |                           |                                                 |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |                  |                                              |     |                                                |     |                                   |    |                                      |     |                                            |         |                            |         |           |         |              |         |              |         |

| The Director Land Use and Military Construction Branch, Installations and Logistics Department, Headquarters Marine Corps certifies that this project has been considered for joint use potential. Unilateral Construction is recommended. This Facility can be used by other components on an as available basis; however, the scope of the project is based on Department of the Navy requirements. |                                              |                           |                                                 |                        |

| <b>10. Description of Proposed Construction:</b><br><p>Constructs utilities infrastructure system improvements along the flightline.</p> <p>The potable water distribution system along 6th Avenue will be resized to capacity and water quality to the existing buildings. This project will also include new water service connections, advanced meters and a connection to the existing system along A Street.</p> <p>Communications pathways consisting of ductbanks, manholes, and cable will be constructed along 6th Ave. Infrastructure will be modernized to support the autonomic logistics information system (ALIS).</p> <p>The power distribution along 6th Ave will be renovated in order to provide a 25MW load sectionalizing Station B to service the buildings and hangars in this area.</p> <p>The sanitary sewer system will be a gravity collection system to replace the aged wastewater collection mains. This project will construct a central lift station with new force main and remove several existing small lift stations.</p> <p>The steam distribution system will include steam and condensate lines, manholes, and connections to existing lines.</p> <p>A new fire protection distribution system, to include water lines, fire pumps, fire pump building and water storage tank, will be constructed to separate the deluge sprinkler and aqueous film forming foam systems in flightline buildings from the potable water system.</p> <p>The storm drainage system will include new storm drainage lines.</p> <p>The industrial wastewater collection system will be upgraded with a new oil/water separator at Hangar #250 and the removal of existing lift stations and associated force mains.</p> <p>Fuel distribution includes the addition of a natural gas line, a JP-5 fuel distribution line, leak detection, and appurtenances.</p> |                                              |                           |                                                         |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                              |                           |                                                         |                        |

Category Code<br>13510                    | 7. Project Number<br>P235 | 8. Project Cost (\$000)<br>106,860                      |                        |
| <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes an emergency diesel generator (150kW).</p> <p>Special costs include Post Construction Award Services (PCAS) and geospatial surveying and mapping.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate. Project includes expansion of the Energy Management and Control System to tie the project utility controls and meters into the existing system.</p> <p>Site Preparation includes site clearing, site demolition and replacement, site earthwork, and the removal of contaminated groundwater and soils.</p> <p>Paving and site improvements include landscaping, roadways, erosion and sediment control, parking lots, and sidewalks. Roadways include extension on 5th Ave, C Street widening, 6th Ave reconstruction, and other road repairs at utility crossings.</p> <p>Environmental mitigation includes Resource Conservation and Recovery Act and Comprehensive Environmental Response, Compensation, and Liability Act industrial waste closures in connection with industrial waste facilities.</p> <p>Demolition includes the following buildings: #122 Booster Pumping Station (125 M2), #1747 Booster Pumping Station (27 M2), #1748 Deep Well Pump Station (11 M2), #3762 Ejector Station #3 (284 LM), B4212 Storage Shed (413 M2), #144 Warehouse (7353 M2), #4427 Telephone Shelter (10 M2).</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                         |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                              |                           |                                                         |                        |

| <p><b>11. Requirement:</b>                      <b>Adequate:</b>                      <b>Substandard:</b></p> <p><b>PROJECT:</b></p> <p>Project will upgrade, renovate and modernize utilities in the core area to support the flightline recapitalization for the F-35 Joint Strike Fighter (JSF).</p> <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>Adequate utilities and infrastructure are required along the flightline to support current operations and the deployment of seven JSF squadrons at MCAS Cherry Point. Utilities to include potable water, telecommunications, electrical, sanitary sewer, steam, fire protection water, storm drainage, industrial wastewater, and natural gas.</p> <p><b>CURRENT SITUATION:</b></p> <p>The majority of the water pipeline in the flightline corridor is cast iron and has been in service since the 1970s.</p> <p>Telecommunication capacity will not support development of the flightline to support beddown of F-35 squadrons. Trunk lines do not have available cable pairs/strands or pathway space to connect to the main central office.</p> <p>The electrical switchgear on 6th Avenue is in good condition; however, the power distribution along 6th Avenue needs to be modernized. The ductbank and switches need to be replaced.</p> <p>The vitrified clay sanitary sewer mains in the core area are old and allow the inflow and infiltration of ground water into the collection system. Treating rainwater increases costs and energy usage. The main sewer lift station, Building #4259, has pumps and controls that are old, outdated and need to be replaced for energy efficiency and reliability.</p> <p>The existing steam piping network is in need of replacement due to broken pipes, leaking valves, malfunctioning sump pumps and flooded manholes.</p> <p>There are three existing elevated water tanks in the core area. The newest tank was constructed in 1972 and the other two tanks were built in 1947.</p> <p>The water distribution system along 6th Avenue provides water for both potable water service and fire protection for the flightline corridor. This integrated water system is problematic to design, operate and maintain due to the oversized pipes, stagnant water, flushing, pressure surges and different code requirements.</p> |                                              |                           |                                                         |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                           |                                                         |                        |

| JOINT USE CERTIFICATION:<br>The Director Land Use and Military Construction Branch, Installations and Logistics Department, Headquarters Marine Corps certifies that this project has been considered for joint use potential. Unilateral Construction is recommended. This is an installation utility/infrastructure project and does not qualify for joint use at this location, however, all tenants on this installation are benefited by this project. |                                       |                           |                                                         |                        |                  |                  |                  |                     |                     |               |                     |  |                      |     |      |    |

Program Element<br>0703676N                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 6. Category Code<br>21370                    | 7. Project Number<br>P106 | 8. Project Cost (\$000)<br>71,050                                    |                        |
| <p>roof and roll-up doors. Spaces will include a shipping/receiving and inventory area accessible by the bridge crane. A maintenance space will include six maintenance bays, tool and spare part storage, a calibration lab and associated office space. A portion of this space will also be accessible by the bridge crane. Personnel locker rooms and showers are also included.</p> <p>Constructs a two-story office/administration (O/A) facility with a concrete foundation, reinforced masonry exterior walls, face brick and metal-panel cladding, aluminum windows. Gypsum wallboard on metal studs will be used where fully enclosed spaces are required. Common space will provide a lunch and break room to accommodate training attendees. The O/A facility will connect to Building #592. Minor renovation of Building #592 is included to facilitate this connection. The O/A facility includes an additional secure server room and network.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. The facade of Building #121 serves as a portion of the installation's perimeter fence. When Building #121 is demolished, the perimeter fence will need to be replaced as required to meet current physical security standards to include a guard booth.</p> <p>Built-in equipment includes one bridge crane (25-ton), fire pumps, passenger elevator (2-stops), lockers, moveable partitions and loading dock levelers.</p> <p>Special costs include Post Construction Contract Award Services (PCAS), phasing/site access and audio/visual design.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of this project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparations include grading, earthwork, concrete and abandoned utility demolition, and contaminated soil disposal.</p> |                                              |                           |                                                                      |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                              |                           |                                                                      |                        |

Category Code<br>21370                    | 7. Project Number<br>P106 | 8. Project Cost (\$000)<br>71,050                                    |                        |
| <p>Special foundation features include pile supported concrete slabs for both facilities. The calibration space inside the S/R&amp;M facility will feature a vibration resistant floor requiring an isolated foundation system.</p> <p>Paving and site improvements include grading and excavation for sub-grade storm water management systems, approximately 140 parking spaces, access roads inside the fence, curbs, sidewalks, landscaping, fencing and clear zone areas around facilities and standoff distances from the perimeter fence. The perimeter fence will also feature vehicular gates and personnel turnstiles. Fencing will enclose the new buildings, site development and improvements to the north and south of Kitty Hawk Avenue, in support of foundry operations. The S/R&amp;M facility will include special pavement facilities for required material handling in shipping and receiving.</p> <p>Electrical utilities include primary and secondary distribution systems, standby/emergency power, outside lighting, concrete ductbank, transformers and telecommunications infrastructure, grounding and lightning protection.</p> <p>Mechanical utilities include heating, cooling and ventilation systems and controls, utility relocation, sanitary sewer lines, potable water supply, storm sewer and gas lines.</p> <p>Environmental mitigation includes cultural resources mitigation needed to demolish the structures in the Philadelphia Naval Shipyard Historic District.</p> <p>Demolishes Building #121 (11,980 m2) and Building #49 (605 m2). Building #121 will be demolished to clear the site for the S/R&amp;M facility. Building #49 will be demolished upon completion of the O/A facility as the functions from Building #49 will be relocated.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirement with the goal of maximizing energy efficiency.</p> <p>Project is in the 100-year flood plain. The first floor for each new building will be elevated and supported by piles above the design flood elevation for flood mitigation.</p> |                                              |                           |                                                                      |                        |

Category Code<br>21370                    | 7. Project Number<br>P106 | 8. Project Cost (\$000)<br>71,050                                    |                        |
| <p><b>PROJECT:</b></p> <p>Constructs a new submarine propulsor manufacturing support facility to support the new Columbia and Virginia Class submarines. Functions are split into two buildings. One building is primarily an office and administration facility and will support an increase in staff. The second building is primarily a shipping/receiving and maintenance facility to support current operations and increases in production from new mission requirements.</p> <p><b>(New Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>Naval Foundry and Propeller Center's (NFPC) primary mission is to design, manufacture, and repair propellers for the US Navy.</p> <p>NFPC provides naval castings for the Navy and is expected to execute the design and manufacturing of Naval propulsor units on time and on budget. In order to meet this expectation, NFPC was directed to move toward 24/7 operations. With the proposed increase in workload expected in October 2018 to support the Columbia and Virginia Class propulsor manufacturing, the efficiency of the current manufacturing process must be improved. Adequate and efficiently configured facilities, strategically located to support the propulsor manufacturing process are required.</p> <p><b>CURRENT SITUATION:</b></p> <p>NFPC does not have adequate space to accommodate the programmed increase in propulsor production and number of personnel. In its current state, NFPC has no centralized location and personnel are widely scattered and one facility is located outside the NFPC security fenceline posing security issues. A makeshift shipping and inspection area occupies valuable space intended for shop functions. Essential equipment that provides NFPC the capability to carry out their mission needs to be maintained to function properly and repaired if malfunctions occur. There is no dedicated area that supports the machine head repairing function, resulting in additional delays and increased operational costs to ship the machine heads to Germany for the necessary repairs.</p> <p>Building #121 is a dilapidated 1920-era building that is vacant. The facility was never properly heated, cooled, insulated nor does it have a fire suppression system installed. NFPC currently uses Building #121 for the storage of some materials.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The current facility spaces are inadequate to meet new mission requirements and if new facilities are not provided, significant cost and schedule impacts will result for the propulsor manufacturing programs.</p> |                                              |                           |                                                                      |                        |

|                                                                                                                                     |                                              |                           |                                                                      |                        |

**12. Supplemental Data:**

A. Estimated Design Data:

1. Status:

|                                                          |                  |
|----------------------------------------------------------|------------------|
| (A) Date design or Parametric Cost Estimate started      | 09/2016          |
| (B) Date 35% Design or Parametric Cost Estimate complete | 03/2017          |
| (C) Date design completed                                | 08/2018          |
| (D) Percent completed as of September 2017               | 15%              |
| (E) Percent completed as of January 2018                 | 35%              |
| (F) Type of design contract                              | Design Bid Build |
| (G) Parametric Estimate used to develop cost             | Yes              |
| (H) Energy Study/Life Cycle Analysis performed           | Yes              |

2. Basis:

|                                      |     |
|--------------------------------------|-----|
| (A) Standard or Definitive Design    | No  |
| (B) Where design was previously used | N/A |

3. Total Cost (C) = (A) + (B) = (D) + (E):

|                                            |         |
|--------------------------------------------|---------|
| (A) Production of plans and specifications | \$4,260 |
| (B) All other design costs                 | \$2,130 |
| (C) Total                                  | \$6,390 |
| (D) Contract                               | \$5,150 |
| (E) In-house                               | \$1,240 |

4. Contract award: 02/2019

5. Construction start: 02/2019

6. Construction complete: 07/2021

B. Equipment associated with this project which will be provided from other appropriations:

| Marine Corps Air Station Beaufort supports and enhances the combat readiness of the Marine Corps Aviation Combat Element and Department of Defense units while improving the quality of life for military personnel, their families, and work force assigned to the Air Station. The Air Station maintains facilities and property, provides security and other services, and operates the airfield in support of tenant units and other forces training/preparing for combat in order to deter, prevent, and defeat threats and aggression aimed at the United States. |                                              |                      |                 |              |                                                 |             |     |                                    |     |                  |

Program Element<br>83141M                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 6. Category Code<br>83141                    | 7. Project Number<br>P487 | 8. Project Cost (\$000)<br>9,517                          |                        |
| <p>areas, personnel support spaces and administrative areas.</p> <p>Construct a low rise steel-framed, reinforced CMU structure housing the administrative offices, toilets, showers and lockers, storage, conference room, break area and utility spaces.</p> <p>This project will provide Anti-Terrorism/Force Protection (ATFP) features and comply with ATFP regulations, physical security and progressive collapse mitigation in accordance with DOD Minimum Anti-Terrorism Standards for Buildings. The cost for these features are included within the cost of the primary facilities.</p> <p>Information systems include telephone, computer network, fiber optic, cable television, security and fire alarm systems and intrusion detection/automated access control infrastructure.</p> <p>Built-in equipment includes gear lockers, cases and shelving.</p> <p>Special costs include post construction contract award services which includes geospatial surveying and mapping.</p> <p>Operations and maintenance support information is included in this project.</p> <p>Department of Defense (DoD) and Department of the Navy (DON) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development (LID) will be included in the design and construction of this project as appropriate.</p> <p>Paving and site improvements includes asphalt parking, sidewalks and landscaping.</p> <p>Demolition includes Building #1258 (399 m2), Building #1030 (152 m2) and Building #1205 (606 m2). The current operations facilities are classified as semi-permanent and have reached the end of their useful life.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                           |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                              |                           |                                                           |                        |

| <b>11. Requirement:</b> <u>1,560 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Construct a recycling/hazardous waste storage complex consisting of a hazardous waste storage facility, an administrative office and covered storage to minimize contaminated run-off from the facility.<br><b>(Current Mission)</b><br><b>REQUIREMENT:</b><br>MCAS Beaufort requires adequate and efficiently configured facilities to support recycling across the installation and to provide proper handling and storage of hazardous waste. It also requires the relocation of the existing facility because it is in the direct flight path of the vertical landing pads.<br><b>CURRENT SITUATION:</b><br>The existing recycling and hazardous waste storage complex, built in the mid-1990s, is considered semi-permanent construction. The current complex is located in the direct flight path of the vertical landing pads that support F-35 operations. The location of the landing pads was driven by airfield requirements for distance from the runway centerline to allow for simultaneous vertical landing and runway operations.<br><br>The complex is in a noise hazard area adjacent to the runway and hearing protection is required for personnel working in the complex. None of the structures contain any sound attenuation construction features. Increased operations due to the basing of the F-35 aircraft will increase the occurrence of high noise levels, resulting in daily health risk for hearing loss to personnel that work at or visit the complex.<br><b>IMPACT IF NOT PROVIDED:</b><br>Personnel exposure to hazardous noise levels (approximately 27 exposures daily of up to 130 decibels) will rise significantly with transition to the F-35 due to proximity to runway and location of the vertical landing pads. When the next squadron arrives if there is no unrestricted use of the vertical landing pad, flight operations will need to be curtailed. And without the ability to conduct simultaneous vertical landings and conventional landings, flights will be lost due to congestion of overhead airspace and full training requirements of F-35 training squadron will not be met. |                                              |                           |                                                           |                        |

| JOINT USE CERTIFICATION:<br>The Director Land Use and Military Construction Branch, Installations and Logistics Department, Headquarters Marine Corps certifies that this project has been considered for joint use potential. Unilateral Construction is recommended. This Facility can be used by other components on an as available basis; however, the scope of the project is based on Department of the Navy requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                              |                           |                                                           |                        |                  |                  |                  |  |                     |               |                     |                     |                      |       |      |     |                                      |       |      |     |                   |     |      |    |

| Marine Corp Recruit Depot Parris Island provides reception, processing and recruit training for enlisted personnel upon their entry into the Marine Corps. The depot also provides recruits with battle skills training and provides schools to train enlisted personnel in the administrative duties of first sergeant, sergeant major and administrative chief. The depot trains drill instructors and drum and bugle corps members and conducts rifle marksmanship training for Marine officers and enlisted personnel. |                                                |      |     |          |                                                 |                      |                 |                                    |                |                  |

| Construct a new rifle range in the same location as the existing Hue City Range. The range will consist of a target area berm, retaining walls, Safety side walls, a safety tunnel, and 600 yard range berm. Side walls with acoustic insulation will also be included. Earth berm structures include a behind the target bullet impact berm with side and rear retaining walls as appropriate with flat lead mining equipment maintenance surfaces. |                                              |                           |                                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                              |                           |                                                                    |                        |

Category Code<br>17940                    | 7. Project Number<br>P404 | 8. Project Cost (\$000)<br>35,190                                  |                        |
| <p>irrigation.</p> <p>Electrical utilities include primary and secondary distribution systems, transformers, and telecommunications infrastructure to include speakers mounted on elevated poles.</p> <p>Mechanical utilities include water lines, a sewage lift station, sanitary sewer lines, storm drainage piping and outfall improvements.</p> <p>Environmental mitigation will include wetland mitigation, unexploded ordnance Mitigation, and archeological monitoring.</p> <p>Range support buildings to be demolished include Building #747 Target area head (34.84 m2), #748 target area head (44.78 m2), #7015 Target house (104.05 m2), #7016 Butts control house (4.09 m2), #7017 target house (104.05 m2), and 300-yard range head (70.60 m2).</p> <p>Facilities will be designed to meet the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirement with the goal of maximizing energy efficiency.</p> <p>The project site is located in the 100-year floodplain. A flood damage vulnerability assessment has been completed. Floodplain mitigation measures will be incorporated in this project. Target storage buildings and the head facilities are to be constructed with concrete.</p> |                                              |                           |                                                                    |                        |
| <p><b>11. Requirement:</b>                      <b>Adequate:</b>                      <b>Substandard:</b></p> <p><b>PROJECT:</b></p> <p>Constructs a replacement range, support facilities, earthen impact berms to stop lead and copper projectiles from entering the neighboring marsh and river, and extension of safety berms to protect personnel on adjacent ranges.</p> <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>MCRD Parris Island has a requirement to provide safe rifle ranges to train recruits that must qualify with their service rifles before they can graduate. Range operations are required to be protective of the public and environment. Training operations dictates upgrades can only be accomplished at one range at a time.</p> <p><b>CURRENT SITUATION:</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                              |                           |                                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                              |                           |                                                                    |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |                  |                                              |     |                                                |     |                                   |    |                                      |  |                                            |         |                            |       |           |         |              |         |

| <p>Weapons Battalion ranges and facilities are essential to MCRD Parris Island's recruit training mission. There are four KD ranges, one unknown distance range and three pistol ranges. All are necessary to meet entry level and annual weapons training requirements and over 20,000 recruits annually qualify on the ranges each year. The current state of the ranges and facilities in support of MCRD Parris Island's weapons training operations present an unacceptable risk to environment and safety.</p> <p>An estimated 60,000 pounds of lead and 35,000 pounds of copper enter the nearby wetlands from required qualify/requalify training. MCRD Parris Island KD ranges do not have earthen impact berms to retain and prevent rounds from landing in the adjacent wetlands and safety berms between different ranges do not fully meet height and length criteria. The general area has commercial and recreational fishing and shell fish activities requiring the area to be cordoned off when ranges are active. Continued accumulation of lead/copper in the wetlands and waterways is increasing negative impacts.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Without earthen impact berms and fully sufficient safety berms, continued operations might not be possible and the ranges would have to be closed or require curtailment of operating hours. Curtailment or closure of live fire weapons training at MCRD Parris Island will have serious detrimental impact for the mission of the Depot to process recruits to become Marines.</p> |                                              |                           |                                                                    |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |                  |                                              |     |                                                |     |                                   |    |                                      |  |                                            |         |                            |       |           |         |              |         |

| <p>Constructs a single story steel-framed, metal-insulated-paneled wall and roof, pre-engineered building motor transfer facility (MTF) with high-bay, elevated concrete dock with air-pallet-bearing floor finish and reinforced concrete foundation.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment at the MTF includes a bridge crane (60-tons) with dual trolleys.</p> <p>Special costs include Post Construction Contract Award Services (PCAS).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes site clearing, excavation and preparation for construction.</p> <p>Paving and site improvements include grading, parking, roadways, fencing and signs.</p> <p>Electrical utilities include primary and secondary distribution systems, outside lighting, transformers and telecommunications infrastructure.</p> <p>Mechanical utilities include sanitary sewer lines and potable water supply lines.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                                  |                        |

| <p><b>PROJECT:</b><br/>Constructs approximately fifteen miles of new railroad track, a new motor transfer facility, and eighteen new missile motor magazines (MMMs).<br/><b>(New Mission)</b></p> <p><b>REQUIREMENT:</b><br/>Adequate and efficiently configured facilities are required to receive missile motors via rail, transfer missile motors from railcars to on-base transporters, and stage missile motors for demilitarization (demil).<br/><br/>The Utah Test and Training Range (UTTR) is the only approved and permitted site for demil of large rocket motors. Demil of a missile motor is highly dependent on local environmental conditions at the time of scheduled demil. The MMMs will provide staging and ready access to missile motors for demil, maximize the demil rate, and relieve inadequate storage capability at the Strategic Weapons Facilities (SWFs).<br/><br/>The TRIDENT II D5 first and second stage motors are transported via rail in specially designed boxcars for cross country shipments. These boxcars contain many safety features and are the only method of transporting these large motors across the country.</p> <p><b>CURRENT SITUATION:</b><br/>Missile motors are either deployed on SSBN submarines, stored in existing MMMs, or undergoing maintenance and assembly. SWF magazines are at or near capacity. There is no additional D5 missile motor storage capacity at the UTTR. Staging motors off-station, in the vicinity of the UTTR, is problematic given the time it would take to transport to the demil site at the UTTR, and the narrow window of opportunity to conduct the demil. There is no existing rail trackage at the UTTR.<br/><br/>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b><br/>Motor storage capacity of existing magazines at the SWFs will be exceeded in 2022. If capacity is reached, the SWFs cannot accept new production motor deliveries to support replacement of aging motors in the fleet, and will result in a gap for motor production. This will result in significant costs to either sustain or re-constitute motor production capability (&gt;\$500 million) to restart the production line. Aged assets removed from SSBNs will not be able to be replaced, resulting in unmet STRATCOM targeting requirements.</p> |                                              |                           |                                                                  |                        |
| <p><b>12. Supplemental Data:</b><br/>A. | <p>Converts the fifth and sixth floor in Building #510 to accommodate the relocation of the nuclear containment and life raft shops. The altered floor plan will include shop equipment areas, maintenance space, pallet racks, fire rated walls around storage areas, administrative office, break room, personnel support areas, bathrooms, and a conference room. Existing stairwells, from ground floor to sixth floor will be repaired to meet code requirements. All non-code compliant combustible construction throughout the building will be removed and the egress deficiency on the third floor will be corrected. Code compliant fire alarm/mass notification, standpipe and sprinkler systems will be installed throughout the facility. Progressive collapse retrofits are included.</p> |                                              |                           |                                                |                        |

Category Code<br>21357                    | 7. Project Number<br>P256 | 8. Project Cost (\$000)<br>26,120              |                        |
| <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes fire booster pump, raised flooring, pallet racks and lockers.</p> <p>Special costs include Post Construction Contract Award Services (PCAS) and shipyard factors.</p> <p>Operation and maintenance support information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with the federal laws and Executive Orders. Low Impact Development will be included in the design and construction as appropriate.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> <p>The Ships Maintenance Facility is located within the 100-year flood plain. The facility is required to be co-located with the existing piers and drydocks to permit secure, close proximity to the ships and equipment undergoing maintenance. Mitigation includes elevating new equipment, inside or outside of the building, to at least two feet above the 100-year flood level.</p> |                                              |                           |                                                |                        |

Category Code<br>21357                    | 7. Project Number<br>P256 | 8. Project Cost (\$000)<br>26,120              |                        |                                                     |         |                                                          |         |                           |         |
| <p><b>CURRENT SITUATION:</b></p> <p>Building #510 was constructed in 1957. The building has been cited for a number of life safety violations. These violations include having no sprinkler protection, inadequate fire alarm placement, lack of a mass notification system and inadequate egress. Most of the occupants on fifth and sixth floors have been relocated into trailers. Current mitigation includes roving fire watches on each floor, 24 hours per day, seven days a week, by existing shop personnel, thus reducing available manpower for ship maintenance and repair activities.</p> <p>The most efficient use of the vacant space in building #510 would be the relocation of the nuclear containment and life raft shops from an existing facility. This existing facility has severe life safety and environmental concerns that would require significantly more funding to repair than Building #510.</p> <p>The shipyard has the only life raft inspection, repairs and certification facility for the east coast, servicing life rafts from Navy and Coast Guard ships. This represents an annual work load of 750 raft inspections, repairs and certifications per year, with 50-100 rafts in active maintenance at any time.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The nuclear containment and life raft shops will stay in their existing facility, resulting in increased risk to critical ship maintenance activities. Approximately 330 personnel, working more than 256,000 man-hours annually, will remain in a high risk environment, with continuing significant rework, higher stress, and additional operating costs due to inadequate working environment. Shop operations will continue to require the rental of a portable sixty ton HVAC system to provide the minimum required climate control for the shops required to operate under specified temperature and/or humidity levels. Even with the temporary climate control, this facility still routinely operates at high summertime temperatures and/or high humidity. The result is negative impacts on availability schedules due to rework, and time delays caused by equipment overheating and failed seams on the contaminated materials containment bags and enclosures.</p> |                                              |                           |                                                |                        |                                                     |         |                                                          |         |                           |         |

| MCB Quantico maintains and operates facilities and provides services and material to support the Marine Corps Combat Development Command, the Marine Corps Air Facility Quantico, and other activities and units designated by the Commandant of the Marine Corps. The mission of the Marine Corps Combat Development Command is to develop Marine Corps warfighting concepts and to determine associated required capabilities in the areas of doctrine, organization, training and education, equipment, and support facilities to enable the Marine Corps to field combat-ready forces. MCB Quantico also serves as the focal point for professional military education. |                                              |                      |      |                 |                                                 |              |                |                                     |       |                  |

| <p>security systems.</p> <p>This project will demolish existing fire station, Building #27400 (463 m2).</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                              |                           |                                      |                        |
| <b>11. Requirement:</b> <u>2,302 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs a fire station to meet increased fire and emergency medical services (EMS) requirements due to development west of Interstate 95 on the base and includes traffic improvements at the intersection of MCB-1 and MCB-2, to comply with the maximum response time of seven minutes.<br><b>(Current Mission)</b><br><b>REQUIREMENT:</b><br>An adequately sized fire station is required to support the number of personnel and apparatus for fire/EMS support to meet the required response time on the West side of MCB Quantico.<br><b>CURRENT SITUATION:</b><br>The existing fire station is in poor condition and inadequately sized to support the number of personnel and apparatus required to provide fire/EMS support. The existing berthing area cannot support the required shift size. The HVAC system does not function properly and building water leaks have created mold issues. Only one section of the building has a fire alarm system and the entire building lacks a fire sprinkler system.<br><br>During peak traffic times, the fire/EMS crews cannot meet the required response time when travel is through the intersection at MCB-1 and MCB-2. This is primarily due to increased traffic caused by growth on the west side of Quantico.<br><br>This project is not sited in a 100-year flood plain.<br><b>IMPACT IF NOT PROVIDED:</b><br>If these facilities are not replaced and properly sited, the fire/safety mission will be subject to failure that could lead to the loss of facilities and/or life. |                                              |                           |                                      |                        |

Unilateral Construction is recommended. This is an installation utility/infrastructure project and does not qualify for joint use at this location, however, all tenants on this installation are benefited by this project.</p> <p>Activity POC: Project Development Lead      Phone No: 703-784-5490</p> |                                              |                           |                                      |                        | <u>Equipment</u> | <u>Procuring</u> | <u>FY Approp</u> | <u>Cost (\$000)</u> | <u>Nomenclature</u> | <u>Approp</u> | <u>or Requested</u> |  | Communication/Data Equipment | PMC | 2020 | 280 | Furniture, Fixtures and Equipment | O&MMC | 2020 | 1,181 | Surveillance Monitoring Equipment | O&MMC | 2020 | 20 | Training Rm AV Equipment | O&MMC | 2020 | 60 |

| <b>10. Description of Proposed Construction:</b><br><p>Constructs a pile-supported reinforced concrete berthing pier for two 250-foot Blocking Vessels (BVs) with integrated wave screens to protect adjacent shoreline from short period waves, underside pier utilities from floating debris, and to provide shelter for Transit Protection System (TPS) small craft during severe weather conditions.</p> <p>Constructs a pile-supported reinforced concrete access trestle to the pier.</p> <p>Constructs a steel framed, metal insulated paneled wall and roof pre-engineered building boat shop with high bay, mezzanine, pedestal jib cranes and reinforced concrete foundation, slab on grade capable of supporting approximately 30 small craft. The facility will include personnel support spaces with associated information systems. Project includes facility elements to support relocation and installation of existing equipment.</p> <p>Constructs a small craft fueling station to dispense diesel fuel marine with four outlets, dispensing pedestal-type commercial pumps, piping to fuel storage tank, hoses, floodlights and grounding devices, electrical power, and fire protection.</p> <p>Constructs a small craft ready fuel storage tank and necessary infrastructure required to support functions and operations at each facility.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Special costs include Post Construction Contract Award Services (PCAS). In addition, this item includes the costs for environmental mitigation PCAS and building control systems. Costs include Washington State gross sales receipt tax.</p> <p>Operations and maintenance support information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development (LID) will be included in the design and construction of this project as appropriate.</p> |                                              |                           |                                                   |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                       |                           |                                                   |                        |

| <p>Mission requirements have outpaced the ability to provide adequate facilities to support the TPS mission at Bangor. As a result, extensive berth shifts and unnecessary days spent away from homeport occur when no pier space is available. Bangor berthing is required approximately 253 days per year.</p> <p>The BVs moor at the Marginal North Pier in the waterfront restricted area, if space is available, under naval ordnance safety and security activity waiver conditions. The explosives safety quantity-distance arc from explosives handling wharf and the increase in operational tempo multiplies the frequency of encumbrance at this berth.</p> <p>Small craft maintenance function is currently being executed in three facilities and seven temporary storage structures near the head of service pier.</p> <p>Diesel fuel is provided using a converted Ship Waste Oily Barge (SWOB). The authorization to continue to operate the SWOB in this capacity is under an interim authority to operate (IATO) for one year. The IATO is renewable annually and contingent on implementation of good custodianship measures and approximately \$800K is spent on eight to fourteen week dry-docking overhaul and tank preservation inspection, survey, and repair operations.</p> <p>The SWOB is currently being moored inboard on the interim floats added to K/B Dock adjacent to the TPS vessel berths to ensure crew endurance limits can be maintained. It occupies moorings originally intended for two vessels. Resupply operations require it to be towed from its moored location to Defense Logistics Agency Manchester and back, a 12 hour evolution. The feasibility of continued use of the SWOB as a fuel container due to environmental concerns is evaluated annually.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Full operational capability of the TPS mission cannot be executed. NWS posture will continue to fall short of DoD directives and requirements. The 250-foot BVs will remain in a nomadic state with continued berth shifts and days spent away from homeport, due to lack of adequate, dedicated pier space.</p> <p>Maintenance will continue to be performed in multiple facilities that are approximately 47 percent of the required space. Inadequately sized facilities will continue to negatively impact maintenance schedules, which</p> |                                       |                           |                                                   |                        |

| <b>10. Description of Proposed Construction:</b><br><br>Constructs a single-story addition to Building #2836. The addition is to be a climate controlled open-bay storage warehouse with sound attenuation to secret level, fire protection systems and lightning protection. The facility provides space for storage of equipment as well as material receiving, processing, staging and shipping areas associated with the operation. |                                              |                           |                                            |                        |

| <p>Renovates the administration and operations spaces in Building #2836, which has a total floor area of 954 m2. Project also modifies those spaces which will be required to provide a connection to the new addition.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security in accordance with Department of Defense (DoD) Minimum Anti-Terrorism Standards for Buildings. DoD Guidance Unit Costs were used for this project. As such, the costs for specific AT/FP features are included in the unit costs.</p> <p>Special costs include post construction contract award services (PCAS). In addition, this item includes the premium costs for secure space and flight line access, temporary flight line fence during construction, third party commissioning, building control systems and station contract support/outage coordination. Costs include Washington State gross sales receipt tax.</p> <p>Operations and maintenance support information (OMSI) is included in this project.</p> <p>DoD and Department of the Navy Guiding Principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes earthwork, grading, site clearing, contaminated soil removal, relocation of a used oil tank, relocation of deicing tank and rerouting of natural gas main.</p> <p>Special foundation features include a pile foundation and retaining wall due to sloping site.</p> <p>Paving and site improvements include parking facilities, roadways, curbs, sidewalks, landscaping, fencing, apron demolition and replacement for stormwater system and stormwater management facilities. Parking facilities for approximately 40 vehicles will be provided. This project includes flight line fencing.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy</p> |                                              |                           |                                            |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                       |                           |                                            |                        |

| <b>11. Requirement:</b> <u>2,408 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs a storage warehouse facility to support fleet aviation requirements.<br><b>(New Mission)</b><br><b>REQUIREMENT:</b><br>Adequate facilities are required to store equipment along with material receiving, processing, staging and shipping in support of fleet operations. This facility, in addition to Building #2836, will be used to stage, maintain, repair, and modernize aviation equipment. This facility must be located in the vicinity of the hangars and be adjacent to the flight line.<br><b>CURRENT SITUATION:</b><br>Existing operations, maintenance and storage capacity at the installation cannot provide sufficient operational maintenance space for long-term operations of the assigned squadrons.<br><br>This project is not sited in a 100-year flood plain.<br><b>IMPACT IF NOT PROVIDED:</b><br>The patrol squadrons will not be able to meet fleet aviation requirements for units, set to arrive in early 2021. Inadequate operation, maintenance, and storage space would adversely impact aircrew missions. |                                       |                           |                                            |                        |

Category Code<br>14377                    | 7. Project Number<br>P258 | 8. Project Cost (\$000)<br>7,930                    |                        |
| <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with Department of Defense (DoD) Minimum Anti-Terrorism Standards for Buildings. DoD Guidance Unit Costs were used for this project. As such, the costs for specific AT/FP features are included in the unit costs.</p> <p>Special costs include Post Construction Award Services (PCAS). In addition, this item includes the costs for third party commissioning, station contract support/outage coordination, building control systems and flight line factors. Flight line factors include: costs for flight line access, security, traffic mitigation and temporary flight line fencing and gates. Costs include Washington State gross sales receipt tax.</p> <p>Project includes Operations and Maintenance Support Information (OMSI).</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                     |                        |
| <b>11. Requirement:</b> <u>1,350 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs a pod storage facility and a covered storage area for pod containers to support the NGJ pods and equipment.<br><b>(New Mission)</b><br><b>REQUIREMENT:</b><br>Storage facilities are required to store next generation components under development. The next generation system is a highly complex electronic jamming system that will incorporate newly designed components that are not currently in the Navy inventory. These new technologies require facilities for storage.<br><b>CURRENT SITUATION:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                              |                           |                                                     |                        |

| <p>The current facility that supports the existing tactical jamming system, which is being replaced by the NGJ, does not have the storage capacity required to support the NGJ capabilities.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>NAS Whidbey Island will not be able to support the new requirements of the NGJ unless new facilities are provided. NGJ pods and equipment are planned to start arriving at NAS Whidbey Island in 2020 and will require dedicated and secure storage facilities. Inadequate storage space would compromise pod security and maintenance operations that support the electronic attack community. The electronic attack mission would be constrained or impossible without facilities prior to the arrival of the NGJ equipment.</p> |                                       |                           |                                                     |                        |

| <b>10. Description of Proposed Construction:</b><br><p>Constructs a low-story austere housing for temporary duty personnel using precast concrete panel construction, with built-up roof and reinforced concrete foundation. Project replaces non-compliant re-locatable housing and noncompliant Bachelor Enlisted Quarters (BEQ) and Bachelor Officer Quarters (BOQ). The project will consist of 60 austere style guest sleeping areas. Project includes spaces equipped for industrial-grade laundry equipment, self-service resident laundry, storage areas, receiving entrance and reception desk.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> |                                              |                           |                                           |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                              |                           |                                            |                        |

| <p>Special costs include Post Construction Contract Award Services (PCAS) and enhanced commissioning. Special costs also includes shipping material and equipment to Atlantic Undersea Test and Evaluation Center (AUTEC).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Project demolishes Building #1201 (2,658.33 m2), Building #1204 (3,305 m2) and Building #1216 (84.54 m2). A total of 58 relocatable trailers will also be demolished. This will eliminate the remaining relocatable housing at AUTEC as these trailers have exceeded their useful life.</p> <p>Intended Grade Mix: 164 E1-E6, 35 E7-E8/W01W04/O1-04 and 1 E9/W05/O5-Up<br/>Total: 200 Persons<br/>Total Max: 240 Persons</p> <p>Facilities will be designed to meet the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                            |                        |
| <b>11. Requirement:</b> <u>3,305 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs austere quarters for military personnel assigned to the AUTEC on Andros Island, to replace non-compliant trailer housing and non-compliant BOQ and BEQ.<br><b>(Current Mission)</b><br><b>REQUIREMENT:</b><br>AUTEC provides a unique deep-water range facility for undersea warfare. The facility supports Research, Development, Test and Evaluation as well as fleet training, certification, and proficiency exercises resulting in a population of permanent party who operate the facility and a varying group of visiting range users who are there to conduct exercises or tests. There is no off-base housing available at sparsely populated Andros Island which means that AUTEC must be self-sufficient providing lodging for all assigned                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                              |                           |                                            |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                              |                           |                                           |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |              |                                              |     |                                                |     |                                   |    |                                      |  |

| <p>and visiting personnel. Military personnel visits average over 14,000 people per year. These military personnel numbers only include those that do not have ships to return to and are required to stay at AUTC facilities. The historic loading figures require accommodations for up to 200 military personnel per night.</p> <p><b>CURRENT SITUATION:</b></p> <p>AUTC is using 58 re-locatable structures to house personnel. These facilities do not comply with Department of the Navy regulations restricting the use of housing trailers to provide term housing. These facilities are in various states of deterioration, have several life safety deficiencies and were not designed to withstand hurricane force winds. The existing BEQ and BOQ are non-compliant with current regulations due to myriad health and safety issues.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Military personnel will remain in inadequate relocatable housing and non-compliant BOQ and BEQ that do not meet current Navy minimum housing standards and have safety and health issues. Personnel must be evacuated or relocated during hurricanes and other damaging tropical weather conditions resulting in added expense to the Navy and risk to personnel.</p> <p>Housing availability directly limits the quantity of qualified personnel available to support testing and fleet operations. A major hurricane impacting Andros Island has the potential to shut down range operations and availability to the fleet for an extended period if housing is damaged or destroyed resulting in the reduction of test and evaluation range services for acquisition programs. Some fleet pre-deployment certifications could not be effectively conducted thereby increasing risk to deployed personnel and equipment.</p> |                                              |                           |                                           |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |              |                                              |     |                                                |     |                                   |    |                                      |  |

| <p>insulated metal module units on a concrete slab foundation.</p> <p>Constructs a two-story, steel-frame Fleet Maintenance Facility (FMF), including maintenance and repair areas, personnel support areas, SCIF and storage. The facility will be composed of insulated metal panels, concrete slab foundation and structural floor, built-up roof on insulated metal decking, interior pre-fabricated metal module units, and exterior RF-shielded tensile fabric membrane.</p> <p>Renovates Building #5070 to include renovations to the existing gypsum board walls and ceilings.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with Department of Defense (DoD) Minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes power converters and systems, power filters, emergency back-up power generator, pod cooler, storage rack shelving and raised access flooring.</p> <p>Special costs include Post Construction Contract Award Services (PCAS) and storage of prefabricated modules prior to installation.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Electrical utilities include electrical distribution system, communications distribution system, site lighting, site security systems, and relocation of existing electrical utilities.</p> <p>Demolition includes the removal of buildings Unknown #1 (211.35 M2), Unknown #2 (144.8 M2), Unknown #3 (133.78 M2), #5018 (144.8 M2), #5021 (133.78 M2), #5022 (142.7 M2), #5023 (144.8 M2), #5024 (144.8 M2) and #5025 (144.8 M2) to clear the site for this project. Buildings #5050 (312.15 M2), #5055 (29 M2), #5075 (557.42 M2) and #5080 (312.15 M2) will be demolished</p> |                                              |                           |                                                         |                        |

Category Code<br>72111                    | 7. Project Number<br>P640 | 8. Project Cost (\$000)<br>36,170                  |                        |
| <p>Convert Building #18 from administrative office space to UH for permanent party enlisted sailors with building common areas including multipurpose spaces, shared kitchen, vending areas, shared laundry and support spaces.</p> <p>Convert Building #20 from retail and storage use to UH for permanent party enlisted sailors with building common areas including multipurpose spaces, shared kitchen, vending areas, shared laundry and support spaces.</p> <p>In addition, new layout alterations including plumbing, air conditioning and ventilation, lighting and electrical power, telecommunications, life safety and fire protection improvements, installation of a combination passenger and freight elevator, emergency generator and all buildings will have seismic structural alterations.</p> <p>Special costs include Post Construction Contract Award Services (PCAS).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with Department of Defense (DoD) Minimum Anti-Terrorism Standards for Buildings.</p> <p>Department of Defense and Department of the Navy (DON) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Electrical Utilities include primary and secondary electrical distribution systems, electrical transformers and switchgear, an electrical generator building with fuel tank and pad, and telecommunication distribution systems.</p> <p>Environmental Mitigation includes cultural resources mitigation, Unexploded Munitions (UXO) / Munitions and Explosives of Concern (MEC) mitigation.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy</p> |                                              |                           |                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                       |                           |                                                    |                        |

| <p>11. Requirement: <u>4,904 m2</u> Adequate: <u>0 m2</u> Substandard: <u>0 m2</u></p> <p><b>PROJECT:</b></p> <p>Convert and modify existing structures for use as UH located at Naval Base Guam.</p> <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>Additional UH units are required to meet the mission requirement at NBG. The 2+0 BEQ standard will be used instead of the 1+1 standard because of the limited space available in the existing buildings. Each building can accommodate up to 44 beds using the 2+0 standard but can only accommodate 32 beds using the 1+1 standard. The 2+0 standard in the case of Buildings 5, 6, 18 and 20 provides the optimum solution and most efficient utilization of their existing floor plans. The use of the 2+0 BEQ standard is consistent with DON policy.</p> <p><b>CURRENT SITUATION:</b></p> <p>Buildings 5, 6, 18, and 20 are part of an enlisted UH complex that was constructed in the 1950s. The UH complex is comprised of 22 two-story open-bay style UH buildings centrally located on the NBG main site. Some of the buildings remained as UHs while most were converted into administrative offices, clinic, post office, classrooms, retail spaces, storage, and other similar uses.</p> <p>Building #5 is currently mostly vacant. The building was used as administrative spaces by the Navy Personnel Support Detachment. Approximately 1,000 SF portion of the building is being temporarily used as office space by Morale Welfare and Recreation (MWR), which will be relocated when this project is awarded.</p> <p>Building #6 is currently occupied by the Branch Medical Clinic. The clinic will move to the new J-006 Apra Harbor Medical Clinic which is currently in design and planned for construction completion in 2021 under the Defense Policy Review Initiative (DPRI).</p> <p>Building #18 first floor is temporarily administrative office space and the</p> |                                       |                           |                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                              |                           |                                                    |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |                  |                                              |     |                                                |     |                                   |    |                                      |  |                                            |         |                            |         |           |         |              |     |              |         |

| <p>second floor is a 2+0 enlisted UH.</p> <p>Building #20 first floor is currently vacant. It was previously used as retail spaces for the Navy Exchange. The second floor is currently being used as temporary linen storage by the enlisted UH manager.</p> <p>The design and construction of the existing buildings are out of compliance with current structural and seismic codes. The precast reinforced concrete walls, columns, and roof slab contain structural cracks and spalls. Deterioration is due mainly to the corrosion of the reinforcing steel caused by constant exposure to the extremely humid seacoast environment.</p> <p>This project is not located in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The large enlisted UH deficit will remain, therefore failure to provide this project would be inconsistent with DOD policy and the Chief of Naval Operations (CNO) directive to provide adequate housing for U.S. Navy single/unaccompanied junior enlisted personnel.</p>                                                                                                                                                                                                                                                                                                                                                                                       |                                              |                           |                                                    |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |                  |                                              |     |                                                |     |                                   |    |                                      |  |                                            |         |                            |         |           |         |              |     |              |         |
