**Appropriation Language**

---

SECTION 1 - APPROPRIATION LANGUAGE

---

For acquisition, construction, installation, and equipment of temporary or permanent public works, naval installations, facilities, and real property for the Navy and Marine Corps as currently authorized by law, including personnel in the Naval Facilities Engineering Command and other personal services necessary for the purposes of this appropriation, [\$----] \$2,543,189,000 to remain available until September 30, [---] 2023. Provided, That, of this amount, not to exceed [\$---] \$185,542,000 shall be available for study, planning, design, and architect and engineer services, as authorized by law, unless the Secretary of the Navy determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of the determination and the reasons therefor.

---

SECTION 2 - EXPLANATION OF LANGUAGE CHANGES

---

1. Deletion of FY 2018 appropriations shown in brackets.

**Blank Page**

**DEPARTMENT OF THE NAVY**  
**FY 2019 Military Construction**  
**Special Program Considerations**

FLOODPLAIN MANAGEMENT AND WETLANDS PROTECTION:

Proposed land acquisition, disposals, and installation construction projects have been planned to allow the proper management of floodplains and the protection of wetlands by avoiding long and short-term adverse impacts, reducing the risk of flood losses, and minimizing the loss or degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Numbers 11988 and 11990.

DESIGN FOR ACCESSIBILITY OF PHYSICALLY HANDICAPPED PERSONNEL:

In accordance with Public Law 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

PRESERVATION OF HISTORICAL SITES AND STRUCTURES:

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object or setting listed in the National Register of Historic Places, except as noted on the DD Form 1391.

PLANNING IN THE NATIONAL CAPITAL REGION:

Projects located in the National Capital Region are submitted to the National Capital Planning Commission for budgetary review and comment as part of the commission's annual review of the Future Years Defense Program (FYDP). Construction projects within the District of Columbia, with the exception of the Bolling/Anacostia area, are submitted to the Commission for approval prior to the start of construction.

ENVIRONMENTAL PROTECTION:

In accordance with Section 102(2)(c) of the National Environmental Policy Act of 1969 (Public Law 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the military construction program.

ECONOMIC ANALYSIS:

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources. Where alternatives could be evaluated, a primary economic analysis was prepared.

| MCB Camp Pendleton supports the combat readiness of 1st Marine Expeditionary Force units by providing training, logistic, garrison, mobilization and deployment support and a wide range of quality of life services including housing, safety and security, medical and dental care, family services, off-duty education and recreation. The base conducts specialized schools and other training and receives and processes students in order to conduct field training in basic combat skills. MCB Pendleton promotes the combat readiness of the Operating Forces and supports the mission of other tenant commands. |                                              |                      |                 |              |                                                 |             |         |                                     |       |        |

| <p>Construct potable water supply pipelines to transport potable water from the 24 Area to the 20 Area potable water storage tanks. The potable water supply pipelines will replace and upgrade the existing supply lines to the 20 and 21 Areas. Provide necessary waterline valves, appurtenances, and tie-in's to meet operational needs of the southern water system.</p> <p>Replace the existing elevated steel tank #20815 with a new water storage facility including all associated appurtenances and piping.</p> <p>Replace booster pump stations (BPS) #20800, #20801 and #20816, as required with new steel framed concrete masonry unit buildings with standing seam metal roofs. BPS's and water storage facility replacement will be connected to base Water Resources Department (WRD) SCADA systems. Replace existing secondary chlorine station #20802 with a new station to allow for secondary chlorination.</p> |                                              |                           |                                                                |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                              |                           |                                                                |                        |

| <p>Special costs include Post Construction Contract Award Services (PCAS), which includes geospatial surveys and mapping; and Real Estate agreements required to perform work in the Public-Private Venture (PPV) housing areas on base.</p> <p>Operations and maintenance support information (OMSI) is included in this project.</p> <p>Environmental mitigation includes the remediation of natural and cultural resources, including jurisdictional waters of the U.S. and numerous flora and fauna species. Monitoring efforts include full time cultural and biological monitoring.</p> <p>Demolition includes existing elevated steel tank #20815 (built in 1954, 250,000 gallons), which has reached the end of its useful life and is below the capacity required to comply with current codes and requirements. Demolition of BPS's #20800 (built in 1971, 75 m2), #20801 (built in 1988, 103 m2), and #20816 (built in 1954, 56 m2).</p> <p>Department of Defense and Department of the Navy (DON) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate. Storm Water Pollution Prevention Plan will be included in the design and construction of this project as appropriate.</p> <p>The pipeline which is in the 100 year flood plain will be buried a minimum of four feet below grade.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                                |                        |
| <b>11. Requirement:</b> <u>12,000 m</u> <b>Adequate:</b> <u>0 m</u> <b>Substandard:</b> <u>0 m</u><br><b>PROJECT:</b><br>Replace and upgrade existing potable water supply pipelines from the 24 Area to the 20 Area potable water storage tanks, the existing BPS's 20800, 20801, and 20816, and the existing elevated steel tank 20815.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                              |                           |                                                                |                        |

Category Code<br>84210                    | 7. Project Number<br>P079 | 8. Project Cost (\$000)<br>47,230                              |                        |
| <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>Adequate distribution and storage facilities are required to provide water to the 20 and 21 Areas for domestic, industrial and fire protection use to meet applicable codes and guidance.</p> <p><b>CURRENT SITUATION:</b></p> <p>The 20 and 21 Areas have the largest population and water demand on the base. The 20 and 21 Areas have the capacity to house approximately 11,000 of the base total of 30,000 family members. Additionally, the 21 Area contains approximately 8,200 civilian and military employees. Multiple existing and new facilities contribute to the increased water demand in the 20 and 21 Areas: the Naval Hospital, MCX, BEQ, Temporary Lodging Facility, and Del Mar recreational beach.</p> <p>The existing potable water supply line providing water to the 20 and 21 Areas is 18-inch diameter and made of asbestos-cement. It is inadequately sized for the population served, does not meet standard codes, and has reached the end of its useable service life. The existing potable water supply lines connecting BPS's 20800 and 20801 to 20 Area potable water storage tanks are made of asbestos-cement and have reached the end of their useable service life.</p> <p>The existing potable water supply pipelines have no isolation valves.</p> <p>The peak domestic demands in the 20 and 21 Areas are 8.3 million gallons per day (MGD). The existing 18 inch diameter potable water supply pipeline can only provide 5.7 MGD, therefore a 24 inch diameter pipeline is required.</p> <p>The existing 20 and 21 Area water storage tanks supply potable water for domestic use and fire suppression and are filled from the existing 18 inch diameter potable water supply pipeline. Since the pipe is not adequately sized to meet the demands of the 20 and 21 Areas, the water storage tanks cannot fill completely due to a lack of water supply capacity in the 18 inch diameter waterline. This places the 20 and 21 Areas at risk in event of fire and could result in water rationing for users.</p> <p>The existing BPS's 20800, 20801, and 20816 pump water to the water storage tanks supplying the 20 and 21 Areas. BPS 20800 was constructed in 1971. BPS 20801 was constructed in 1988. BPS 20816 was constructed in 1954 does not have adequate flow capacity to provide for peak flow plus fire demand and is out of compliance with current codes.</p> |                                              |                           |                                                                |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                       |                           |                                                                |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |                  |                                              |     |

| <p>Elevated steel tank 20815 was constructed in 1954, with a 250,000 gallon capacity, is the sole water source for the Wire Mountain II housing area. It has reached the end of its useful life, is badly deteriorated, is undersized to meet the peak domestic demands of Wire Mountain II and does not meet seismic code.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The existing undersized potable water supply pipeline will continue to be used, resulting in multiple negative impacts to the 20 and 21 Areas.</p> <p>Due to the increasing age, more maintenance and repairs will be required. If this potable water supply pipeline is out of operation due to maintenance and repairs, there is no viable alternative to supply water to the 20 and 21 Areas residents, hospital patients, marines, and sailors. Residents and employees living and working in the 20 and 21 Areas will have to rely on limited water capacity in the storage tanks and water rationing will be required, resulting in mission impacts until the waterline can be fixed.</p> <p>Due to absence of isolation valves on the waterline, approximately 250,000 gallons of potable water must be removed in order to perform maintenance and repairs. This results in longer outages, greater cost, and significant environmental impacts.</p> <p>If BPS's 20800, 20801, or 20816 fail, the base will not be able to supply the 20 and 21 Areas with water. This will result in loss of water to 11,000 military family members, 8,200 military and civilian personnel including 1 Marine Expeditionary Force, and patients at the Naval Hospital.</p> <p>Elevated steel tank 20815 will continue to present a high risk of rupture or failure. If 20815 fails, then the 1,800 residents of Wire Mountain II will lose their sole source of water storage and have inadequate water to meet daily demand and fire demand.</p> |                                       |                           |                                                                |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |                  |                                              |     |

| APPROPRIATIONS (NON ADD)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                              |                            |                                                                 |                        |
| <b>10. Description of Proposed Construction:</b><br><p>Constructs a new multistory Tracked Amphibious Assault Vehicle (AAV)/ Amphibious Combat Vehicle (ACV) Motor Transport Maintenance Complex for the Third Assault Amphibious (AA) Battalion. The amphibious maintenance facility complex will be constructed of reinforced concrete masonry walls with concrete foundation, thickened concrete slab and standing seam metal roof over ribbed steel deck secured to steel trusses. The facility will include maintenance bays, radio vehicle bays, ACV Tire machine shop bay, welding bays, wire shop, communication operator shop area, tool rooms, layette, electronic/ ordnance maintenance shop, optic repair and battery shops, sonic cleaning room, vehicle supply inventory, dispatch office, securable workspace and storage areas (SECREP), secure communications (COMSEC) equipment and Crypto Vault, classroom/ multi-purpose room with audio/video capability, tech library and administrative spaces. The facility will include, fire alarm and mass notification systems, intercom system, Electronic Monitoring and Control System (EMCS), Intrusion Detection System (IDS) and security equipment (surveillance and access control to selected areas).</p> <p>The general purpose warehouse will include individually caged areas for storage requirements of the three Line Companies, Headquarters and Services Company, battalion maintenance section, battalion communications and motor transport section.</p> <p>The armory/weapons storage will include individual cages to provide storage and security for all the battalion's weaponry. It will have an intrusion detection system and class "V" vault doors.</p> <p>The overhead covered parking area for the AAV-ACVs will include an adjacent tire changing shop.</p> <p>The general storage will consist of a covered storage canopy that will be used for storage of shipping containers (quadcons), rotating stock, petroleum, oil, lubricants and hazardous materials.</p> <p>This project will provide anti-terrorism/force protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes four bridge cranes (10-ton), air compressors</p> |                                              |                            |                                                                 |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                            |                                                                 |                        |

| <p>with dryers, vehicle exhaust systems, wire cages, welding hoods, exhaust systems, and water/POL/air reels.</p> <p>Special Cost includes Post Construction Award Services (PCAS) that includes geospatial survey and mapping. Special costs also include monitoring during secured spaces construction at the maintenance facility and armory including surveillance by Construction Security Technicians and Cleared American Guards during secure space finish work in accordance with Intelligence Community guidance. Construction monitoring is required to observe the construction to ensure that there are no abnormalities that could affect and compromise the security of these spaces.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Pavement Facilities include heavy duty, dual reinforced concrete paving.</p> <p>Electrical utilities include primary and secondary underground distribution system, transformers, electrical switchgear, exterior lighting system. Telecommunications systems include fiber optic cabling, local area network (LAN) and telephone wiring, including NIPR and SIPRNET.</p> <p>Mechanical utilities includes natural gas, sewer, water, stormwater and an oil water separator.</p> <p>Demolition of four facilities is included in this project: Existing storage admin facility #210585 (1420 M2), existing maintenance facility #210577 (3,525 M2), existing maintenance shop #21585 (376 M2) and existing motor transport maintenance shop #21671 (501 M2). These facilities will be demolished as the functions they now house will be relocated to the new facilities built by this project and they no longer will be needed.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy</p> |                                              |                            |                                                                 |                        |

| efficiency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                              |                            |                                                                 |                        |
| <b>11. Requirement:</b> <u>12,705 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs maintenance, warehouse and armory facilities to support the existing AAV as well as the new ACVs to be fielded in 2021 to the 3rd AA Bn and the AAS Bn which are co-located on Camp Pendleton.<br><b>(Current Mission)</b><br><b>REQUIREMENT:</b><br>An adequate and efficiently configured facility is required to properly maintain and repair the existing fleet of AAVs and new ACVs. Currently, 3rd AA Bn is allocated 204 AAVs (tracked vehicles) and the battalion will receive 67 of the new wheeled ACVs in 2021. AAS Bn will be allocated an additional 25 ACVs in 2021. The new ACVs are wheeled vehicles with much different maintenance requirements than the tracked AAVs.<br><b>CURRENT SITUATION:</b><br>3rd AA Bn is one of only two active duty assault amphibian battalions in the Marine Corps and is located in a two-story maintenance building constructed in 1973. A seismic study and a geotechnical analyses were conducted to examine the structural condition of the building. The results identified several measures necessary to strengthen the building and repair existing damages, including soil mitigation and major seismic upgrades such as reinforced exterior walls. The facility was determined to be uneconomical to repair or improve.<br><br>There is no space within the building with adequate climate control to provide the temperature and humidity parameters required to maintain sensitive optical and electronic components of the new ACV. Also, the existing maintenance building lacks a proper communication and electronic shop to maintain the AAV because of space constraints and insufficient electrical power.<br><br>This project is not sited in a 100-year flood plain.<br><b>IMPACT IF NOT PROVIDED:</b><br>The 3rd AA Bn will continue to work in a building that would not withstand a major seismic event and will be extremely limited in their ability to maintain the new ACVs. Simple repairs such as changing or filling tires with air would be completely limited if not impossible to accomplish. The existing armory, not sized to stow additional armaments, would not be able to receive the new turret gun accompanying the ACVs. Consequently, the operational readiness of the ACV and AAV fleet will degrade, thus |                                              |                            |                                                                 |                        |

| <b>10. Description of Proposed Construction:</b><br><p>Constructs a full motion trainer (FMT) facility of concrete masonry unit walls, reinforced concrete slab-on-grade floor, metal roofing over steel roof trusses, fire protection systems, heating ventilating and air conditioning system and electrical systems. The building will have a high-bay space for the trainer, computer room with raised floor, classroom, instructional support spaces, restroom facilities, maintenance and storage areas.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> |                                              |                            |                                                  |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                            |                                                  |                        |

This new system will offer increased capacity to cope with the growing weight of equipment used by the Army and Marine Corps. It will bring improved technology and increased performance to handle current and future missions, better fuel efficiency, and reduced maintenance through existing shore-based infrastructure.<br><br>The project constructs a new FMT facility to centralize infrastructure to consolidate all aspects of training in one location, to provide operational support for home ported detachments, virtual and hands-on operator/crew |                                              |                            |                                                  |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                              |                            |                                                  |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |              |                                              |     |                                                |    |                                   |    |                                      |  |                                            |       |                            |       |           |       |              |       |              |       |

| <p>training, and to support contingencies in accordance with combatant and commander tasking.</p> <p>Initial Operating Capability is July 2020.</p> <p><b>CURRENT SITUATION:</b></p> <p>The existing LCAC trainer is sited at a different location 50 miles away from the site. Assault Craft Unit Five (ACU-5) currently has no facility that can adequately support the SSC craft FMT.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Without this facility pilots would be required to qualify for the SSC craft at an east coast location. Failure to provide essential facilities will result in fewer trained and qualified sailors, it will impact operations and support to Marine Expeditionary Forces, and Navy and Marine Corps team's capability to execute a broad spectrum of missions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                              |                            |                                                  |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |              |                                              |     |                                                |    |                                   |    |                                      |  |                                            |       |                            |       |           |       |              |       |              |       |

| <p>Provides electrical upgrades and modifications to the four maintenance hangars for Assault Craft Unit Five (ACU-5). At each of the hangars the frequency converter will be replaced with disconnect switches rated at 480 volts, and the existing inoperable 400-Hertz system will be replaced. The modifications to the current electrical system will provide 400-Hertz and 60-Hertz connections for dual purpose power capability to support both the current Landing Craft Air Cushion (LCAC) and Ship-to-Shore Connector (SSC) systems at the same time.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. | <p>Generated Unit Costs were used for this project and include the cost of features to meet the minimum DoD AT/FP standards.</p> <p>Special costs include Post Construction Contract Award Services (PCAS).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                                                                                                                                                                               |                                              |                            |                                         |                        |
| <b>11. Requirement:</b> <u>4 EA</u> <b>Adequate:</b> <u>0 EA</u> <b>Substandard:</b> <u>0 EA</u><br><b>PROJECT:</b><br>Upgrades existing electrical systems in four maintenance hangars to support the new SSC craft.<br><b>(New Mission)</b><br><b>REQUIREMENT:</b><br>The Navy is in the process of building and fielding an evolutionary new SSC system to replace the LCAC vehicle. This new system will offer increased capacity to cope with the growing weight of equipment used by the Army and Marine Corps. It will bring improved technology and increased performance to handle current and future missions, better fuel efficiency, and reduced maintenance through existing shore-based infrastructure.<br><br>This project is required to upgrade the existing electrical system to support new SSCs that will have a 60-Hertz electrical distribution system instead of the current LCACs 400-Hertz. The upgrade and modification to the existing system is required in order to maintain the current LCACs and, to provide adequate power to the new SSC craft. Initial Operational Capability date is July 2020.<br><b>CURRENT SITUATION:</b> |                                              |                            |                                         |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |                            |                                         |                        |

| <p>The Navy is phasing out the LCACs and over a 10-year timeframe phasing in the SSC program, one craft at a time. The SSC program will provide high-speed, heavy-lift, and ship-to-shore capability no other platform can provide. SSC will be based at existing LCAC locations and requires higher power capacity and larger infrastructure than the existing LCACs. Marine Corps Base Camp Pendleton can only provide power and infrastructure support to the LCACs. The Navy currently is conducting a service life extension program (SLEP) to keep 72 LCACs in use until the SSC's become operational. The SLEP will sustain and enhance craft capability, replace obsolete electronics, and repair corrosion damage.</p> <p>The project is not located in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Failure to provide electrical upgrades will impact operations and support to Marine Expeditionary Forces, and Navy and Marine Corps teams capability to execute a broad spectrum of missions from humanitarian assistance and disaster response to multidimensional amphibious assault.</p> |                                              |                            |                                         |                        |

| <p>helipad in support of VRM-30's CMV-22B squadron at Naval Air Station North Island (NASNI). Constructs a forklift rework shop that is required in order to relocate an existing site tenant away from the project site area. Project also makes minor interior renovations to Buildings #861 and #825 in support of tenants requiring relocation from the project site. Project relocates existing laydown area to a concrete area north of the project site. Constructs parking apron, taxiway, and helipad designed so that they can support the CMV-22B's weight and high heat signature.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. User Generated Unit Costs were used for this project and include the cost of features to meet the minimum DoD AT/FP standards.</p> <p>Special Costs include Post Construction Contract Award Services (PCAS).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes excavation, grading, clearing, grubbing and removal of old tie downs. Additional site preparation includes demolition of taxiway Lima and old apron, old utilities and manholes.</p> <p>Paving and site improvements includes airfield striping, roadways, approximately 80 parking spaces, curbs, gutters, sidewalks, fencing, signs and landscaping.</p> <p>Electrical utilities include primary and secondary electrical and communications distribution systems lighting, transformers and telecommunications infrastructure.</p> <p>Mechanical utilities includes fire protection systems, supply fixtures and water, gas, storm water, sanitary sewer and water lines.</p> <p>Demolition includes Building #312 (2,386.8 m2), Building #42 (2,681.6m2),</p> |                                              |                            |                                                   |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |                            |                                                   |                        |

| <p>Building #309 (2,169.8m2), Building #329 (6.5 m2), Building #308B (9.4 m2), Building #308C (15.5 m2), Building #308A (16.3 m2), Building #373 (6.5 m2), Building #308 (2,077.7 m2), Building #310 (2,136.8 m2), Building #328 (8.1 m2), Building #304 (91 m2), Building #331 (8.5 m2), Building #306 (2,253.4 m2), Building #C41 (306.6 m2), Building #372 (8.2 m2), Building #C29 (301.9 m2) and Building #C88 (301.9 m2). All of the above facilities will be demolished to clear the site for this project.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                              |                            |                                                   |                        |
| <b>11. Requirement:</b> <u>130,566 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs adequate aircraft parking apron for the CMV-22B, provide 400hz to parking apron and will provide all other infrastructure improvements required to make the airfield a complete and usable facility for the CMV-22B. Project will demolish 18 facilities to clear the area for the project.<br><b>(Current Mission)</b><br><b>REQUIREMENT:</b><br>Adequate airfield areas and facilities are required for Navy CMV-22B aircraft. This project supports the transition plan for the Carrier Onboard Delivery (COD) to shift to the CMV-22B from their current airframe, C-2 Greyhound. During this shift, VRC-30 will transition to VRM-30 as the CMV-22B Osprey becomes the primary airframe for COD missions. VRM-30 will receive a total of 17 aircraft with four additional aircraft being forward deployed. Seventeen CMV-22B aircraft will be based at NASNI. VRM-30 will require 13 aircraft apron parking spots to support their expected home basing projection with at least one detachment of the 17 will be in the hangar at any given time.<br><b>CURRENT SITUATION:</b><br>Currently, VRC-30 operates the C-2 Greyhound and is located in Hangar 525. There are 11 operational C-2As at NASNI (four detachments of two aircraft plus additional three aircraft in a shore component).<br><br>The CMV-22B Osprey is a multi-mission tilt-rotor Vertical/Short Take Off and Landing (VSTOL) aircraft with two wingtip-mounted prop rotors. The aircraft combines the Vertical Take Off and Landing (VTOL) and hovering advantages of the helicopter, with the high-speed, high-altitude cruise |                                              |                            |                                                   |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                              |                            |                                                   |                        |

| <p>capability of modern turboprop aircraft. The current configuration of the runways and taxiways that support the C-2A does not support the configuration requirements of the CMV-22B.</p> <p>The existing wash rack does not meet the minimum standards and it does not have curbing or a dedicated utilities control building as required.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>NASNI currently has no airfield area that can support long-term homebasing and growth of the CMV-22B. Additional apron space is required to support the increased number of operational aircraft. Currently 11 operational C-2As are supported at VRC-30; however, this will increase to 17 operational CMV-22Bs.</p> <p>VRM-30 personnel will not be able to perform maintenance on the required number of aircraft, forcing scheduled maintenance tasks to be performed on the apron or delayed which will impact aircraft mission availability.</p> <p>Homebasing CMV-22B airframes at NASNI without adequate parking aprons, taxiways, and helipads will result in accelerated deterioration of the airfield at NASNI. Ultimately this accelerated deterioration will affect not only the COD mission of VRM-30 but other missions integral to the Navy.</p> |                                              |                            |                                                   |                        |

| <p>gutters, ready storage locker pads, parking for approximately 300 spaces, pedestrian features, security fencing, canopy site development, landscaping, stormwater infiltration system, airfield support facilities, wash rack and hazmat storage area.</p> <p>Electrical utilities include primary and secondary distribution systems, unit substations, aircraft protection equipment shelters, generators, lighting, and telecommunications infrastructure.</p> <p>Mechanical utilities include natural gas lines, water distribution lines, stormwater, sanitary sewer lines, fire protection systems and supply lines, and water storage tanks.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                                                                                                                                                                                                                                                                                                                         |                                              |                           |                                             |                        |
| <p><b>11. Requirement:</b> <u>94,654 m2</u> <b>Adequate:</b> <b>Substandard:</b></p> <p><b>PROJECT:</b></p> <p>Constructs a two-module Type I aircraft maintenance hangar and associated airfield pavements, operational and munitions storage, renovates existing battery shop and builds new tool room.</p> <p><b>(New Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>The F-35C replaces the aging F/A-18C Hornet. The progressive transition from the legacy F/A-18C to the F-35C requires unique technology and infrastructure requirements for the new aircraft. NAS Lemoore will be home to 16 deployable squadrons by 2018.</p> <p><b>CURRENT SITUATION:</b></p> <p>None of the existing hangars meet the space, security and electrical requirements to support F-35C aircraft; therefore, a new hangar is required to support the new mission requirements. Current hangar space at NAS Lemoore is insufficient and inadequate to support the F-35C.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>NAS Lemoore will be unable to support the mission essential operations, training, and maintenance requirements of the F-35C. Severe, negative operational impacts will be imposed on flight, maintenance and training</p> |                                              |                           |                                             |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                              |                           |                                             |                        |

| <p>operations.</p> <p>By 2018, NAS Lemoore will be the home of 16 deployable fleet squadrons and two Fleet Replacement Squadrons, training F/A-18 and F-35C pilots. Existing F/A-18 squadrons will begin transitioning to F-35C squadrons with the first transition in January 2018, the second transition in May 2021, the third transition in Aug 2023, and so on. By 2028, NAS Lemoore will have approximately 278 jets.</p> |                                              |                           |                                             |                        |

| Marine Corps Air Station Miramar supports and enhances the combat readiness of 3rd Marine Aircraft Wing units and other Department of Defense units while improving the quality of life for military personnel, their families, and work force assigned to the Air Station. The Air Station maintains facilities and property, provides security and other services, and operates the airfield in support of tenant units and other forces training/preparing for combat in order to deter, prevent, and defeat threats and aggression aimed at the United States. |                                              |                      |                 |                                                 |                |                                     |                        |     |       |                  |

| <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes demolition of existing pavement, site clearing, excavation, and HTC test panels.</p> <p>Environmental mitigation includes contaminated soil removal, bio-monitoring, stream bed restoration.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                         |                                              |                           |                                                               |                        |
| <b>11. Requirement:</b> <u>18,582 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Project will construct two concrete VLPs and improve the taxiways and shoulders.<br><b>(New Mission)</b><br><b>REQUIREMENT:</b><br>MCAS Miramar is slated to receive five F-35B squadrons that will require a landing pad that can withstand extraordinarily high thermal loads during vertical landing operations by the F-35B STOVL aircraft. The VLPs are required to support the F-35B pilot training syllabus and other F-35B operations. First aircraft arrival and initial operational capability is FY2020.<br><br>This F-35 MILCON project is required to support the Marine Corps Aviation Plan, Operational, Training and Maintenance Requirements, Planned Deployment Schedules and overall flexibility of Aviation Assets and Facilities.<br><b>CURRENT SITUATION:</b><br>Currently there are no HTC vertical landing pads at MCAS Miramar that will support the F-35 mission. |                                              |                           |                                                               |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                              |                           |                                                               |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |      |                             |                  |                                              |     |                                                |     |                                   |    |                                      |     |                                            |         |                            |       |           |         |              |     |              |         |

| <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Due to the high temperature environment of the F-35B, the existing primary landing surfaces at MCAS Miramar will not remain operational because of the faster rate of degradation to the concrete caused by STOVL landings. Without operational VLPs the requirements for training on the F-35 will not be met and the F-35B would be unable to conduct vertical landings at MCAS Miramar or certain maintenance check flights.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                              |                           |                                                               |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |      |                             |                  |                                              |     |                                                |     |                                   |    |                                      |     |                                            |         |                            |       |           |         |              |     |              |         |

| Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |                           |                                                    |                        |
| <b>11. Requirement:</b> <u>7,500 m</u> <b>Adequate:</b> <u>0 m</u> <b>Substandard:</b> <u>0 m</u><br><b>PROJECT:</b><br>Constructs airfield fence, motorized vehicle gates, pedestrian turnstiles, and associated utilities and will construct new patrol access roads to ensure that the flightline meets Level II security requirements.<br><b>(Current Mission)</b><br><b>REQUIREMENT:</b><br>USMC airfields are identified as Level II restricted areas and must meet the associated physical security requirements. These requirements include clearly defined and protected perimeters and access control points. New hangars and other facilities proposed for the airfield in support of the F-35 will have Special Access Program Facilities (SAPF) spaces with additional physical security requirements. A Level II restricted area airfield will facilitate compliance with these standards.<br><b>CURRENT SITUATION:</b><br>The current MCAS Miramar airfield does not meet the physical security requirements for a Level II restricted area. Significant portions of the airfield security fence are in extremely poor condition, are too low and in need of replacement, and have numerous other deficiencies. Additionally, there are no AT/FP measures at the existing gates, along the fence leading off-base, or along the roads running perpendicular to the airfield security fence.<br><br>This project is not sited in the 100 year flood plain.<br><b>IMPACT IF NOT PROVIDED:</b><br>MCAS Miramar will not meet existing airfield security requirements outlined by current reports, guidance, and design criteria. A layered defense-in-depth is vital to protecting aircraft on the airfield.<br><br>Failure to construct this project compromises the safety and security of the aircraft based and operating at MCAS Miramar and would expose Marine aviation to a significant risk of mission failure in the event aircraft or hangars are damaged or destroyed by unauthorized intruders. |                                              |                           |                                                    |                        |
| <b>12. Supplemental Data:</b><br>A. Estimated Design Data:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                              |                           |                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                              |                           |                                                    |                        |

Program Element<br>0816376N                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 6. Category Code<br>31530                    | 7. Project Number<br>P777 | 8. Project Cost (\$000)<br>22,150                              |                        |
| <p>walls, reinforced concrete foundation and floors and roof decks. The facility will include administrative space, four modular secure laboratory spaces with raised computer flooring, a high bay area with crane rails and a crane, a three-stop passenger/freight elevator and a roof top laser test area.</p> <p>The land-based calibration target facility will consist of a concrete masonry building on pile foundations. The target will include a roll-up door; heating, ventilation and air-conditioning; power and communication lines.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes an overhead crane (25-ton) and an elevator (3-stop).</p> <p>Special costs include Post Construction Contract Award Services (PCAS).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and the construction of this project as appropriate.</p> <p>Environmental mitigation includes unexploded ordnance mitigation.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in the DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> <p>This project is sited in the 100-year flood plain. The facility needs to be in proximity to the Sea Test Range and have the ability to integrate with command/control systems at NSWC PHD SWEF at Port Hueneme. The ground floor of the weapons integration laboratory will be elevated to two-feet above the high-water level of a projected 100-year flood.</p> |                                              |                           |                                                                |                        |

Program Element<br>0702776N                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 6. Category Code<br>81330                    | 7. Project Number<br>P0888 | 8. Project Cost (\$000)<br>48,440                  |                        |
| <p>replaces metal roofing system; replaces interior power supply and lighting system; replaces roof and wall exhaust vent system; upgrades structure to comply with current seismic zone standards; fills in concrete floor cavities; prepares existing concrete floor ready to pour-in-place equipment pad; repairs and repaints interior and exterior walls; replaces existing door openings (personnel and roll-up) to include locks, provides an eyewash station, and replaces electrical wiring and lighting system to energy efficient system.</p> <p>Relocates and upgrades switching station to accommodate the required capacity for power intensive ships and ship loading growth. Electrical components of the new Harbor Drive Switching Station (HDSS) includes, switchgears with voltage circuit breakers, busses, underground primary and secondary cabling, protective relaying, power system automation communication line, communication line for Supervisory Control and Data Acquisition (SCADA) System connected to the head-end equipment, smart meters, lighting and other associated electrical appurtenances.</p> <p>Relocates existing outdoor secondary unit substation to the new site of HDSS. Replaces an existing secondary unit substation adjacent to the existing Building #148. Each substation will include a smart meter and will be enclosed with a concrete masonry unit block wall with a chain link fabric gate to include equipment pad with containment.</p> <p>Constructs an underground electrical distribution line and trenches and backfills for feeder lines (primary and secondary) duct bank and cable run, excavates for electrical manholes and/or hand holes, and installs underground 12 KV feeder line to provide direct connection from South Cummings Substation to the new HDSS and to the Pier switching stations and unit substations.</p> <p>Project will construct a wall supporting open web steel joist and metal roof deck, low slope roofing with gutters and downspouts, metal door with access control, steel overhead roll-up doors and epoxy coated concrete slab floor.</p> <p>Co-locates switching stations A and B in the existing Conversion Plant Building #148.</p> <p>Replaces two switch skids on Pier 1 with a padmount switch.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features</p> |                                              |                            |                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |                            |                                                    |                        |

| <p>and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Special costs include Post Construction Contract Award Services (PCAS).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes excavation/grading, contaminated soil removal, site clearing and pavement demolition for construction of new HDSS.</p> <p>Paving and site improvements include curbs, gutters, sidewalks, landscaping, storm water drainage improvements, fencing, paving for road access and contaminated soil removal.</p> <p>Demolition includes the removal of structure #3003 (279 m2), structure #184ASUB (500KVA secondary unit substation), structure #3277 (switching station B), and structure #204463 (switching station A). Structures #3003, #184ASUB, #3277 and #204463 will be demolished upon completion of this project. The existing switching stations and secondary unit substation cannot be taken offline until replacement facility is complete and fully operational.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                            |                                                    |                        |
| <b>11. Requirement:</b> <b>Adequate:</b> <b>Substandard:</b><br><b>PROJECT:</b><br>Upgrades waterfront switching stations and associated feeder cable and conduit duct bank. Project also constructs new feeder distribution cable and conduit duct bank to provide direct connection between Cummings Substation and HDSS and other switching stations at the waterfront area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |                            |                                                    |                        |

Category Code<br>81330                    | 7. Project Number<br>P0888 | 8. Project Cost (\$000)<br>48,440                  |                        |
| <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>To provide adequate and reliable electrical distribution to accommodate current and future electrical loading. Replacement of electrical distribution system components is required to provide reliable electric service for base operations to function. Project will support future upgrades of Piers 2, 6 and 8 to 4160 volts. Pier upgrades are necessary to support future arrival of more power intensive ships at Naval Base San Diego.</p> <p>NB San Diego homeported ship loading will increase by over twenty ships in the next five years.</p> <p><b>CURRENT SITUATION:</b></p> <p>The existing HDSS was built in 1947 and currently serves as a distribution location for four stations, which in turn serve five waterfront piers and one dry dock. HDSS is obsolete, has exceeded its useful service life, and is visibly deteriorating and showing signs of corrosion. Many integral parts are antiquated, unreliable, failing, and require frequent maintenance, presenting increased hazardous working conditions for electrical technicians. The backup electrical capacity for HDSS is derived from the local (commercial) utility, is currently insufficient and has no redundancy. The current location of HDSS is already overcrowded with underground distribution lines, making reutilization of the site difficult without an extensive electrical outage. HDSS cannot take on additional loading.</p> <p>Switching Station A is housed within Building #148A (built in 1980) and currently serves as a distribution location for Pier 1 and houses equipment for an abandoned compressed air system. Switching Station B is pad-mounted outdoor equipment (built in 1970) and serves as a distribution location for Pier 2. Both switching stations are obsolete, have exceeded useful service lives, are visibly deteriorating and showing signs of corrosion. A recent failure in March 2015 caused electrical power outage throughout the north side of NB San Diego affecting multiple buildings and Piers 1 and 2.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Interruption to shore power will prevent ships to berth and force them to berth at other piers. Additionally, this will result in a non-operational FAA aviation light at the top of the high mast light, impact the piers security cameras and SCADA Control/monitoring alarm system, and impact the waste water/oily waste station pumps on the piers. If the pier loses power,</p> |                                              |                            |                                                    |                        |

| <b>10. Description of Proposed Construction:</b><br>Constructs a pile supported reinforced concrete pier to replace existing Pier 8. Deck provides capacity for a 181 metric ton crane. The pier includes primary and secondary fenders, and new loadout ramp cradles on the quaywall on each side. Utilities include electrical, potable water, sanitary sewer, compressed air, oily waste and compensating ballast water |                                              |                           |                                        |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                              |                           |                                        |                        |

| <p>will be constructed such that its elevation will be above any projected high tides and tidal surges to ensure that deck itself and the pier utilities network will not be damaged by sea water.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                              |                           |                                        |                        |
| <p><b>11. Requirement:</b> <u>17,398 m2</u> <b>Adequate:</b> <b>Substandard:</b></p> <p><b>PROJECT:</b><br/>Replaces Pier 8.<br/><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b><br/>The new Pier 8 shall provide four ship berths capable of supporting the mix of Pacific Fleet ships.</p> <p><b>CURRENT SITUATION:</b><br/>Pier 8 is inadequate based on age, condition and operational constraints.</p> <p>Pier 8 was constructed in 1945 and is not compliant with current structural or seismic criteria.</p> <p>The pier experiences reduced operating capacity due to multiple deficiencies including inadequate utilities, structural deterioration, load restrictions and inadequate deck width. Utilities on the pier are in poor condition resulting in interruption to services including electrical, potable water, sanitary sewer, compressed air and steam. There is concrete spalling in numerous locations above and below deck, on the bottom of the pile caps and along the top of the concrete bearing piles. Concrete curbs on the deck edges are cracked and broken in many areas and sections of corroded steel reinforcement are exposed, creating unsafe working conditions to personnel, especially during berthing operations. The maximum crane loading restricted Pier 8 to 35-60 ton cranes in limited areas of the pier, with specific outrigger placement, and limited forklifts to 6000 lb. capacity. The current width of the pier restricts truck and mobile crane operations. Current conditions limit those ships which can berth at the pier.</p> <p><b>IMPACT IF NOT PROVIDED:</b><br/>Limited crane use and maintenance laydown area on Pier 8 NBSD does not properly support berthing of current home ported ships.</p> <p>Concrete spalling above deck will continue to pose unsafe working conditions, especially during berthing operations.</p> <p>Spalling on the pier's underdeck and pile caps will continue to limit the pier's structural integrity.</p> |                                              |                           |                                        |                        |

| Naval Base Ventura County (NBVC) is a premier naval installation composed of three operating facilities - Point Mugu, Port Hueneme and San Nicolas Island. NBVC supports approximately 80 tenant commands with a base population of more than 19,000 personnel. Tenant commands encompass an extremely diverse set of specialties that support both Fleet and Fighter, including three warfare centers: Naval Air Warfare Center Weapons Division, Naval Surface Warfare Center Port Hueneme Division and Naval Facilities Engineering and Expeditionary Warfare Center. NBVC is also home to deployable units, including the Pacific Seabees and the West Coast E-2C Hawkeyes. |                                              |                      |                 |              |                                                       |             |     |                                     |     |                |

| <p>Constructs a missile assembly and test building (MATB) to support the supersonic missile test and evaluation (T&amp;E) and Fleet anti-ships cruise missile (ASCM) threat training and certification on the Navy Sea Range. Project includes a concrete foundation and floor, insulated walls of concrete masonry units with fiberglass siding. The MATB facility provides space for missile section buildup, horizontal assembly, disassembly and checkout including equipment section buildup/missile backshop processes and checkout/repair of missile motors. Additional space is provided for</p> |                                              |                           |                                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |                           |                                                                    |                        |

| <p>offices, restrooms, and mechanical equipment for building support and environmental control equipment.</p> <p>Constructs a Type-D earth-covered, reinforced concrete and un-barricaded missile magazine.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes overhead crane supports, crane (50-ton) and above-ground tanks with foundation.</p> <p>Special costs include Post Construction Contract Award Services (PCAS), station utility hook-ups/connections and transportation costs for barging of materials.</p> <p>Operations and Maintenance Support information (OMSI) is included in this project.</p> <p>Paving and site improvements includes stormwater sewer catch basin, sidewalks, paving to magazine, shotcrete ground cover, approximately 15 parking spaces, paving around magazine and missile assembly building.</p> <p>Electrical utilities includes transformers, exterior lighting, telephone cable, ductbanks, high voltage and fiber optic cables, lightning protection, and electrical and communications manholes.</p> <p>Mechanical utilities includes thermal and humidity monitoring, fire hydrants, sanitary sewer lines, water lines, fire water line, sanitary sewer lift station and trenching for water line.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy</p> |                                              |                           |                                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                              |                           |                                                                    |                        |

| <b>11. Requirement:</b> <u>1,663 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs two facilities required for supersonic missile T&E and Fleet<br>ASCM threat training on the Navy Sea Range.<br><b>(New Mission)</b><br><b>REQUIREMENT:</b><br>Adequate missile assembly and test buildings are essential to produce the<br>required rate for horizontal missile assembly/disassembly, missile section<br>build-up, nose fairing mate/de-mate, missile transfer to/from facility<br>transporter, missile systems testing, post-mate checkout and final missile<br>inspection. Affected programs are the Navy's supersonic sea-skimming<br>targets (SSST), other Navy missile programs, Missile Defense Agency<br>multiple programs, and others that use the San Nicolas Island (SNI)<br>facilities.<br><br>The MATB is required in order to simultaneously assemble and test up to<br>eight SSSTs, a capability required to produce the 25 or more SSSTs per year<br>needed for the launch schedule. The supersonic missile launches at SNI are<br>increasing from seven in 2017, to a minimum of 16 and up to as many as 34<br>launches in 2019. Current facilities can only produce four SSSTs a quarter,<br>and provide no backup/reserve targets for Quad Launches. This also<br>eliminates all other missile work in the facilities as safety regulations<br>prohibit simultaneously working multiple missile types in the same<br>facility.<br><br>A missile magazine is required in order to be able to safely store up to<br>eight All-Up-Rounds (AURs) until they are needed for launch. Currently<br>there are no magazine facilities on SNI large enough to store one AUR. The<br>AURs will be moved from the MATB to the magazine upon completion.<br>Currently, AURs must be launched within a week or disassembled, which voids<br>eight weeks of assembly work.<br><b>CURRENT SITUATION:</b><br>Located sixty miles from Naval Base Ventura County Point Mugu, SNI is an<br>integral part of the Navy's 36,000-square mile Sea Range. SNI is the Navy's<br>only CONUS capable site for SSST launches, with Pacific Missile Range<br>Facility Hawaii being the only other capable site world-wide.<br><br>SSST launches on SNI rarely exceeded five targets a year through 2017,<br>which was within the capacity of the two small MATBs on SNI. Over a three- |                                              |                           |                                                                    |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                              |                           |                                                                    |                        |

| <p>month period, each MATB can assemble two SSSTs but at the cost of prohibiting any other missile program work. After assembly is complete, the AURs must be stored in an approved storage facility within 108 hours. Due to no existing approved storage facilities for the AURs, the targets must either be launched within the 108 hour window or disassembled. After the two targets are assembled, the MATB is at capacity and cannot be utilized for other programs.</p> <p>Maximum launch capacity for SSSTs with current facilities is 12, with the capability to surge to 16. Surge capacity will be extremely difficult to meet and will provide zero spare targets should one or more targets fail pre-launch. If required to meet surge capacity, no other missile work can be executed on SNI as all existing facilities will be required to work on SSSTs, severely impacting other Navy missile programs, DoD Missile Defense Agency programs, and various other agencies.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The Navy is at high risk to complete required ships T&amp;E and critical Fleet ASCM training. This project will result in the delay of some Ship Self-Defense System (SSDS) Initial Operational Capability (IOC) and deploying some Carrier Battle Groups without anti-missile training.</p> |                                              |                           |                                                                    |                        |
| <b>12. | <p>Constructs a navigation channel and causeway to separate public boat traffic from naval ordnance on-loading and off-loading operations and address safety and security concerns.</p> <p>Provides dredging for navigation channel, ship channel, and turning basin. Much of the dredge material will be used within the construction of the causeway, environmental mitigation, and beach replenishment to minimize more expensive disposal methods. Excess dredge material remaining will be offshore disposal or upland disposal as necessary.</p> |                                              |                           |                                                               |                        |

| <p>portion of the east and west rock moles.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> <p>This project constructs a causeway/mole with road and security building within the 100-year flood plain. The causeway is designed to structurally withstand the 100-year flood. The elevations of the causeway/mole road and security building will be adequate to preclude damage by a 100 year storm.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                           |                                                               |                        |
| <p><b>11. Requirement:</b>                      <b>Adequate:</b>                      <b>Substandard:</b></p> <p><b>PROJECT:</b></p> <p>Constructs fill causeway, navigation channel for public boat traffic, moorings, wharf improvements, dredging and breakwater.</p> <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>Navigation channel for public boat traffic outside of current Public Transit Route Explosive Safety Quantity Distance arcs with physical separation for Navy vessels at berth is required for mission assurance.</p> <p>An expanded turning basin is required for safe berthing of larger amphibious Navy vessels and to minimize tug usage.</p> <p><b>CURRENT SITUATION:</b></p> <p>Naval Weapons Station (NWS) Seal Beach is the primary ordnance onload and offload facility for surface combatants, amphibious ships, Coast Guard ships and barges homeported in the San Diego region and is the only Navy intermediate level maintenance facility for the vertical launch system standard missile and the primary West Coast activity for encan/decan of Tomahawk missiles. The length of these ships combined with the small size and shape of Anaheim Bay currently prevents them from safely entering and maneuvering to the ammunition wharf. These ships are currently unloaded and offloaded at anchorage offshore via vertical replenishment.</p> <p>Public boat traffic currently transit to and from Huntington Harbor and Sunset Marinas through Anaheim Bay. This boat traffic causes numerous safety and security concerns thus requiring improvements such as the physical separation of public boat traffic from Navy vessels at berth in Anaheim Bay.</p> |                                              |                           |                                                               |                        |

Unilateral Construction is recommended. This Facility can be used by other components on an as available basis; however, the scope of the project is based on Department of the Navy requirements.</p> |                                              |                           |                                                               |                        | (A) Date design or Parametric Cost Estimate started | 09/2016 | (B) Date 35% Design or Parametric Cost Estimate complete | 05/2017 | (C) Date design completed | 01/2019 | (D) Percent completed as of September 2017 | 15% | (E) Percent completed as of January 2018 | 35% | (F) Type of design contract | Design Bid Build | (G) Parametric Estimate used to develop cost | Yes | (H) Energy Study/Life Cycle Analysis performed | Yes | (A) Standard or Definitive Design | No | (B) Where design was previously used | N/A | (A) Production of plans and specifications | \$7,070 | (B) All other design costs | \$3,535 | (C) Total | \$10,605 | (D) Contract | \$8,543 | (E) In-house | \$2,062 | <u>Equipment</u> | <u>Procuring</u> | <u>FY Approp</u> | <u>Cost (\$000)</u> | <u>Nomenclature</u> | <u>Approp</u> | <u>or Requested</u> |  | Physical Security Barriers (Port Ops) | OPN | 2020 | 8,632 |

| <p><b>10. Description of Proposed Construction:</b></p> <p>Converts Building #52, a three-story administration building, housing operational storage, instrument calibration, public works maintenance, astronomy laboratory, optics laboratory, communication laboratory and administration offices. The conversion includes upgrading the architectural, structural, electrical, mechanical and fire protection systems.</p> <p>Constructs Building #51, a low-rise master time clock facility, housing the master clock, mission operations center and Earth Orientation Parameter Center (EOPC). The facility will have slab-on-grade with spread footings, exterior load-bearing concrete block walls with oversized masonry units, standing seam-metal roof on metal-truss system and isolation concrete pads for the clock systems. The facility also includes a High Altitude Electromagnetic Pulse (HEMP) protection and a Sensitive Compartmented Information Facility (SCIF). Anti-Terrorism/Force Protection (AT/FP) upgrades to the exterior envelope will be provided.</p> <p>Converts Building #52A, a three-story data processing center, housing the communication center, optics laboratory and administration offices. The conversion includes upgrading the architectural, structural, electrical, mechanical and fire protection systems. This facility includes a SCIF.</p> <p>Converts Building #3, a low-rise observers electronic lab, housing the optics laboratory and civilian quarters. The conversion includes exterior historic restoration, interior alterations to include architectural, electrical, mechanical and fire protection systems.</p> <p>Converts Building #78, a two-story optics laboratory, housing</p> |                                              |                           |                                                                 |                        |

| <p>administration offices and laboratory space. The conversion includes upgrading the architectural, structural, electrical, mechanical and fire protection systems.</p> <p>Information systems include basic telephone and data, computer network, fiber optic connectivity to the time dissemination facility, cable television, security, fire alarm systems and infrastructure. Project provides the infrastructure for the following systems: Secret Internet Protocol Router Network (SIPRNET), Unclassified but Sensitive Internet Protocol Router Network (NIPRNET), Sensitive Compartment Informational Systems and Common Operating Environment.</p> <p>This project will provide AT/FP features and comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes raised access flooring, emergency generator, passenger/freight elevators, fuel storage tank, uninterrupted power system, fire/smoke protection system and a clean agent fire protection system.</p> <p>Special costs include Post Construction Contract Award Services (PCAS), enhanced commissioning and clock room commissioning. Additional special costs include an archaeological site review, temporary facilities and gross receipt tax for electrical service from the secondary electrical feeder.</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Special construction features include restoration of historic exterior, HEMP Hardening and isolation pads for clocks.</p> <p>Paving and site improvements include sidewalks, landscaping, stormwater detention dry pond, access road, bioretention swales, erosion and dust control measures, ramps and guard rails.</p> <p>AT/FP includes an anti-ram barrier and sliding crash gates with card</p> |                                              |                           |                                                                 |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                              |                           |                                                                 |                        |

| <p>readers.</p> <p>Electrical utilities include pad mounted transformer and switchgear, secondary telecommunications service, underground feeder, site lighting, telecommunication and replacement of transformer and switchgear.</p> <p>Demolition of Building #82 (92 m2), an unoccupied technical equipment building that is in poor condition. The facility will be demolished to clear the site for this project.</p> <p>Environmental mitigation includes hazardous material (asbestos, lead based paint contamination, polychlorinated biphenyl ballasts, mercury) abatement, radon mitigation, historic preservation mitigation for cultural tree disturbance and restoration monitoring.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in the DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                                                                                                                                                |                                              |                           |                                                                 |                        |
| <b>11. Requirement:</b> <u>7,599 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs, converts and demolishes facilities to support the mission at the Master Time Clock.<br><b>(Current Mission)</b><br><b>REQUIREMENT:</b><br>The Master Time Clock Facility provides a wide range of astronomical data and products and serves as the official source of time for the U.S. Department of Defense and a standard of time for the entire United States.<br><br>Activities include astrometry, astronomical applications, earth orientation and precise time. Time Services' mission includes determining the positions and motions of the Earth, Sun, Moon, planets, stars and other celestial objects; providing astronomical reference data; measuring the Earth's rotation and orientation; determining precise time and maintaining the master clock for the United States.<br><br>Astronomical and timing data are essential for accurate navigation and the support of secure digital communications on Earth and in space. US Naval Observatory Master Clock provides the only common time reference standard |                                              |                           |                                                                 |                        |

| <p>for all of DoD, with an ensemble of approximately 51 weighted atomic clocks. An adequate, efficiently configured building is required to provide a secure and controlled laboratory environment to house clock equipment and instruments.</p> <p>Facility must be designed to meet the temperature and humidity performance specifications, maintain temperature constraints of the space, and must include redundant electrical and mechanical systems and controls for continued operations.</p> <p><b>CURRENT SITUATION:</b></p> <p>The current configuration of the operational facilities is a result of decades of patchwork and ad hoc designs, resulting in numerous force protection, power and communication single point vulnerabilities. USNO Master Clock and the related vault functions are currently housed in Building #50 (constructed in 2007), Building #52A (constructed in 1993) and Building #78 (constructed in 1961 as an administrative office facility). Within Building #78, the lack of adequate space, poor temperature and humidity control, and inadequate ventilation and air-conditioning systems significantly impacts the required controlled environment. Building #78 is not able to meet the HVAC condition requirements for the clocks, it has an overtaxed electrical support system, lacks power redundancy, is near the helicopter pad (which poses a safety risk), has asbestos throughout, is contaminated with mold, and has ceiling height limitations which make it difficult for staff to access the clocks for maintenance. The research laboratory in Building #78 is outdated and does not meet the space requirements.</p> <p>Building #52A serves as the Earth orientation office and the operations center. The facility is located near the USNO fence line, which is a security concern. The facility has poor temperature and humidity controls; cooling issues negatively impact the functionality of the mission critical equipment.</p> <p>When the clocks and research spaces are relocated with this project, this facility will be converted into communication laboratory space to meet the additional needs of the mission.</p> <p>This project is not in a 100-Year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The Master Time Clock Facility will not be able to adequately perform the mission and support the DoD and DON. There will be a significant lack in critical infrastructure. Deferral of this project will result in the</p> |                                              |                           |                                                                 |                        |

| The mission of NS Mayport is to sustain and enhance warfighter readiness. Naval Station Mayport is the third largest fleet concentration area in the United States. Mayport's operational composition includes a harbor capable of accommodating 34 ships and an 8,000-foot runway capable of handling any aircraft in the Department of Defense inventory. With more than 3,400 acres, NS Mayport is host to more than 70 tenant commands. |                                               |      |     |              |                 |                      |                                                       |                        |                                    |                  |

| <p>infrastructure upgrades for widening Bailey Avenue, related traffic and pedestrian safety improvements, curbs, landscaping, signs and stormwater management facilities.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                           |                                          |                        |
| <p><b>11. Requirement:</b>                      <b>Adequate:</b>                      <b>Substandard:</b></p> <p><b>PROJECT:</b></p> <p>Constructs a multi-story LSF, a parking structure, and converts/alters portions of Building #2480 to support the LCS mission at Naval Station (NS) Mayport.</p> <p><b>(New Mission)</b></p> <p><b>REQUIREMENT:</b></p> <p>The LCS program is designed to maximize efficiency of deployed ships by transferring traditional shipboard training and administrative functions to shore facilities. The LSF provides the ashore component of administrative functions of deployed and in-port ships as well as providing a portion of the training component. Program efficiencies accrue to the Navy both financially and tactically since ashore facilities are less expensive to build and operate than the same capabilities afloat. Without the LSF, LCS would require larger crews and larger hulls and lose much of their tactical advantages over conventional ships. A parking facility is required to support the LCS ashore facilities.</p> <p><b>CURRENT SITUATION:</b></p> <p>LCS began to arrive at NS Mayport in 2016 and will continue at a rate of two per year up to 14 ships by 2022. Existing LSF space reached saturation in FY17 requiring use of 11 temporary facilities and by January 2018 an additional five temporary facilities will be required at NS Mayport. This capacity gap will continue to widen and require up to 40 temporary facilities. The LCS CONOPS requires LSF facilities to be in place two years in advance of ship arrival in order to meet training requirements. Existing space in Building #448, Building #2480 and temporary facilities will lag behind program growth until this project is completed. The current situation is a temporary workaround and is unsustainable to support full mission operational capability.</p> <p>This project is not sited in a 100-year flood plain.</p> |                                              |                           |                                          |                        |

| <b>IMPACT IF NOT PROVIDED:</b><br>Without the LSF, both the Squadron and ship crews cannot be adequately supported by existing shore facilities due primarily to over-crowding which will severely impact CONOPS and mission capability.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                              |                           |                                          |                        |                  |                  |                  |                     |                     |               |                     |  |                                   |     |      |       |                           |     |      |     |                                   |     |      |       |                       |     |      |     |                         |     |      |     |                      |     |      |    |               |     |      |       |

| <b>10. Description of Proposed Construction:</b><br><br>Constructs a low-rise steel-framed Littoral Combat Ship (LCS) Operational Training Facility (LTF), with reinforced concrete bearing walls, low-sloped two-ply modified bituminous roof membrane system and a shallow foundation system. The facility will include specialized training spaces such as systems trainers, classrooms, personnel support space and applied instruction space.<br><br>The entire facility is classified as Open Storage Secret (OSS). |                                              |                           |                                                                   |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                           |                                                                   |                        |

| <p>Information systems include basic telephone, computer network, fiber optic, cable television, security and fire alarm systems and infrastructure.</p> <p>This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings.</p> <p>Built-in equipment includes a passenger elevator, raised access flooring and operable partitions.</p> <p>Special costs include Post Construction Award Services (PCAS). In addition, this item includes the costs for third party commissioning.</p> <p>Operations and maintenance support information is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                                   |                        |
| <b>11. Requirement:</b> <u>6,122 m2</u> <b>Adequate:</b> <u>0 m2</u> <b>Substandard:</b> <u>0 m2</u><br><b>PROJECT:</b><br>Constructs a low-rise LTF to support LCS training requirements at Naval Station Mayport.<br><b>(New Mission)</b><br><b>REQUIREMENT:</b><br>The LCS program is designed to maximize efficiency of deployed ships by transferring traditional shipboard training and administrative functions to shore facilities. The LTF provides the ashore component of crew training functions for in-port ships and off-hull crews. Program efficiencies accrue to the Navy both financially and tactically since ashore facilities are less expensive to build and operate than the same capabilities afloat. Without the LTF, LCS would require larger crews and larger hulls and lose much of their tactical advantages over conventional ships.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                              |                           |                                                                   |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                              |                           |                                                                   |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |              |                                              |     |                                                |     |                                   |    |                                      |  |                                            |       |                            |       |           |         |              |       |              |         |

| <p><b>CURRENT SITUATION:</b></p> <p>LCS began to arrive at NS Mayport in 2016 and will continue at a rate of two per year up to 14 ships. LTF functions are currently being met by workarounds utilizing temporary space at NS Mayport and training capabilities at Naval Base San Diego. The LCS Concept of Operations (CONOPS) requires LTF facilities to be in place two years in advance of ship arrival in order to meet training requirements. Construction of an Integrated Tactical Trainer in Building #1388 and LCS Operational Training Facility (FY15 P423) will provide partial training capability until this project is completed. However, the current situation is a temporary workaround and is unsustainable to support full mission operational capability.</p> <p>This project is not sited in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>Without the LTF, both the Squadron and ship crews cannot be adequately trained by existing shore facilities due primarily to over-crowding which will severely impact CONOPS and mission capability.</p>                                                                                                                                                                                                                                                                                                                |                                              |                           |                                                                   |                        |                                                     |         |                                                          |         |                           |         |                                            |     |                                          |     |                             |              |                                              |     |                                                |     |                                   |    |                                      |  |                                            |       |                            |       |           |         |              |       |              |         |

| <p>generators.</p> <p>Special costs include Post Construction Contract Award Services (PCAS).</p> <p>Operations and Maintenance Support Information (OMSI) is included in this project.</p> <p>Department of Defense and Department of the Navy principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development (LID) will be included in the design and construction of this project as appropriate.</p> <p>Site preparation includes site demolition, earthwork, and contaminated soil mitigation.</p> <p>Special foundation features include piles.</p> <p>Electrical utilities include primary and secondary electrical distribution systems, transformer, and telecommunications distribution system.</p> <p>Mechanical utilities include water distribution, storm drainage system, sanitary sewer system, and a sanitary sewer lift station.</p> <p>Facilities will be designed to meet or exceed the useful service life specified in DOD Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.</p> |                                              |                           |                                                 |                        |
| <p><b>11. Requirement:</b>    <u>2,762 m2</u>    <b>Adequate:</b>                      <b>Substandard:</b></p> <p><b>PROJECT:</b></p> <p>Provides a permanent waterfront facility between Drydocks 2 and 3 that centralizes and consolidates planning and production personnel who directly support major submarine availabilities during drydocking. This facility will allow for more efficient operations, increase mission assurance and quality of service, reduce operating costs, satisfy space and infrastructure requirements and ensure worker safety.</p> <p><b>(Current Mission)</b></p> <p><b>REQUIREMENT:</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                              |                           |                                                 |                        |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                              |                           |                                                 |                        |

Category Code<br>21370                    | 7. Project Number<br>P214 | 8. Project Cost (\$000)<br>45,000               |                        |
| <p>This project is required to support critical drydocking work vital to the maintenance of submarines and ships homeported at Pearl Harbor. Critical to the success of any project team is housing its members in functional, adequately sized and professionally equipped contiguous work spaces in very close proximity to its ships/submarines. The consolidated project team is composed of project management (planning and engineering) and production shops.</p> <p>The Navy's Fleet Response Plan will keep more ships in a higher state of readiness and surge potential. This will require a high state of readiness and efficiency on mission critical Naval Shipyard assets, especially the drydocks and production shops. Pearl Harbor Naval Shipyard and Intermediate Maintenance Facility (PHNSY&amp;IMF) supports Los Angeles (SSN688) and Virginia (SSN774) class submarines, and Arleigh Burke (DDG), Ticonderoga (CG), Oliver Hazard Perry (FFG) and Safeguard (ARS) class surface ships.</p> <p><b>CURRENT SITUATION:</b></p> <p>There are three drydocks within the PHNSY&amp;IMF Controlled Industrial Area. The intermediate caisson at Drydock 2 allows for a fourth docking location to support planned depot maintenance work as well as emergent docking requirements.</p> <p>The concept of operations has changed from the time the shipyard was constructed. Components would be removed from the ship and taken to the shop where the repairs would take place. These large back shops performed roughly 60 percent of the project work, with ripout and reinstallation the large part of the waterfront work. The ratio has changed to doing the 80 percent of the work within the submarine/ship adjacent to the worksite and 20 percent in the back shop. This change required that the shipyard workers operate closer to the drydocks currently in temporary relocatable facilities.</p> <p>The only permanent project facilities at PHNSY&amp;IMF to support drydock work are located in Building #2192 and Building #2193. These buildings do not provide the most efficient work space and are not capable of supporting a Depot Modernization Period or an Engineering Overhaul availability team. This results in approximately half of the project team and production shop personnel working out of a multitude of temporary relocatable facilities and substandard buildings and tents surrounding the drydock. Temporary structures present numerous physical deficiencies and insufficient operational space. In addition, workers waste man-hours repeatedly erecting and disassembling tents; transporting and setting up trailers and</p> |                                              |                           |                                                 |                        |

| <p>shacks, and providing temporary power and communications. This wasteful process is repeated whenever there is a high wind or storm warning.</p> <p>This project is not located in a 100-year flood plain.</p> <p><b>IMPACT IF NOT PROVIDED:</b></p> <p>The shipyard will be unable to provide adequate facilities to support critical drydocking work vital to the maintenance of submarines and surface ships. The result is loss of efficiency and productivity, which directly and adversely impacts Fleet maintenance costs, schedules, and ship availability. Working out of makeshift shacks, tents, and trailers is also a quality of life issue for workers with potential safety/health risks caused by temporary utilities and electrical appliances in an outdoor environment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                       |                           |                                                 |                        |                                                     |         |                                                          |         |                           |         |                                            |      |                                          |      |                             |                  |                                              |     |                                                |    |                                   |     |                                      |  |                                            |         |                            |         |           |         |              |         |              |       |                  |                  |                  |  |                     |               |                     |                     |                      |     |      |       |
