**Footnotes:**

<sup>(15)</sup> Unit cost fluctuation is due to procurement of variable systems to support Nova legacy configurations and the addition of Network Monitoring/Computer Network Defense(NETMon/CND) capability requirement to meet cyber security requirements.

<sup>(16)</sup> Unit cost fluctuation is due to procurement of variable systems to support Navy Information eXchange Terminal (NIXT) legacy configurations, and the addition of Network Monitoring/Computer Network Defense(NETMon/CND) capability requirement to meet cyber security requirements. Installation costs vary due to unique site configurations and equipment installation requirements.

| Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |         |                                        |              |             |                                                                           |         |                                     |         |         |             |            |
| PROGRAM COVERAGE: The Submarine Communications Program mission is to create a common, automated, open system architecture radio room for all submarine classes. The program provides for the procurement and installation of systems incorporating the technical advances of network centric warfare to allow the submarine force to communicate as part of the Battle Group. The program addresses the unique demands of submarine communications, stealth, obsolescence issues and higher data rate requirements.                                                                                                                                                                                                                                                                                                                                             |             |         |                                        |              |             |                                                                           |         |                                     |         |         |             |            |
| [P40A / L0035 Antenna Modifications]: - Antenna modifications provide for the procurement and installation of field change kits of legacy antenna equipment (OE-315, AN/BRA-24, AN/BRA-6B, BRT-1/1A). These modifications address performance issues, improve reliability and maintainability, decrease vulnerability, and provide cost effective technology refresh. Modifications are applicable to all submarine classes (LOS ANGELES, SEAWOLF, OHIO SSBN/SSGN, and VIRGINIA) and are implemented on a Fleet priority basis. Procurement and Installation unit costs vary due to procuring and installing different components each fiscal year.                                                                                                                                                                                                             |             |         |                                        |              |             |                                                                           |         |                                     |         |         |             |            |
| [P40A / L0099 Towed Buoy Antenna (TBA) (AN/BRR-6/6B) Reliability Improvements]: The Towed Buoy Antenna (TBA) (AN/BRR-6/6B) system is installed on the OHIO Class Ballistic Missile Submarines (SSBN). Each boat has two (2) towed communications buoys with the sole function of supporting Navy Nuclear Command, Control, and Communications (NC3) strategic requirements, connecting the President of the United States (POTUS) to SSBN communications reception for the strategic deterrent mission. The TBA AN/BRR-6/6B system receives transmission across the Very Low Frequency (VLF), Low Frequency (LF), and High Frequency (HF) range. The buoy system provides significant operational flexibility by providing a means to passively receive communications while remaining at depth with minimal impact on boat's maneuverability or detectability. |             |         |                                        |              |             |                                                                           |         |                                     |         |         |             |            |
| Different hardware components are procured each fiscal year. Budget exhibits and quantities have been updated from PB18. Procurements are now subdivided into each type of upgrade to provide greater detail in budget request from year to year. Procurements vary each year due to the phased approach as prescribed in the AN/BRR-6/6B Towed Buoy Antenna Lean Six Sigma Event Final Report of 30 September 2011. Hardware components are selected by TBA unit interdependency, urgent need for improvement, and fielding efficiency without degrading SSBN operational readiness.                                                                                                                                                                                                                                                                           |             |         |                                        |              |             |                                                                           |         |                                     |         |         |             |            |
| The TBA AN/BRR-6/6B reliability improvements provide for the procurement and installation of field change kits to improve system performance (measured by operational availability (Ao)) and reliability (measured by mean time between failures (MTBF)); improvements are applicable to SSBN only. The TBA AN/BRR-6/6B is a key component of the NC3 system and the primary means of receiving Emergency Action Messages (EAMs).                                                                                                                                                                                                                                                                                                                                                                                                                               |             |         |                                        |              |             |                                                                           |         |                                     |         |         |             |            |

| <p>[P3A / L0080 OE-538/BRC Inc 2]: OUTBOARD ELECTRONICS (OE)-538 &amp; OE-592 ANTENNA GROUP - The OE-538 System is currently installed on all submarine classes except SSBN. The OE-592 system is currently installed on SSBNs. The OE-538 Inc 2 consists of two configurations: OE-538A and OE-538B. The OE-538A effort upgrades the OE-538 system from FY15-FY21 to support Mobile User Objective System (MUOS), Link-16 Tactical Data Link and Iridium capabilities. The OE-538B efforts upgrades the OE-538A from FY20-FY27 to support Global Positioning System (GPS) Anti-Jam and GPS Military Coded capabilities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                        |                                                                           |
| <p>[P3A - 2 / L0087 Submarine High Data Rate Antenna]: SUBMARINE HIGH DATA RATE (SubHDR) SATELLITE COMMUNICATIONS SYSTEM - The SubHDR system provides submarines with antennas that have the bandwidth, gain, and flexibility to meet the stated Commander, Submarine Force, United States Atlantic Fleet/Commander, Submarine Force, US Pacific Fleet (COMSUBLANT/COMSUBPAC) requirements for HDR communications in the Super High Frequency (SHF) and Extremely High Frequency (EHF) frequency spectrums. The Radome provides a watertight enclosure for the antenna and associated electronics, as well as being a transparent window for Radio Frequency, (RF) communication signals to pass through. This radome needs to be replaced with a newly designed radome because the existing radome is experiencing severe cracking after only 3 to 4 years of service, at which time it is required to be pulled from service in order to prevent an implosion. This new design will prevent those cracks from occurring.</p>                                                                                                                                                       |                                        |                                                                           |
| <p>[P3A - 3 / L0084 CSRR-SSBN (OHIO) Mod Upgrades]: The Common Submarine Radio Room (CSRR) is an interoperable submarine communications system operating within the Information Dominance architecture, which provides consistent and reliable two-way, modern, Internet Protocol (IP) connectivity to joint and combined forces. This evolutionary system achieves unmatched capability, cost reduction, and future technology integration via a multimedia, circuit sharing, and Commercial Off-The-Shelf (COTS) based open architecture that serves as the shipboard automated communications control system. Procurement in this line is for the radio room workstations, chassis, Radio Frequency Distribution and Control System (RFDACS), common power supplies, power distribution units, cabling, mounting kits and ancillary components required to integrate communications equipment for submarines. The RFDACS technology update for LOS ANGELES class submarines brings COTS functionality and supportability to the submarine external communications system. The CSRR Program supports LOS ANGELES, SEAWOLF, VIRGINIA and OHIO (SSBN and SSGN) class submarines.</p> |                                        |                                                                           |
| <p>CSRR modernization activities bring new capabilities, address new requirements, resolve End-of-Life (EOL) and obsolescence issues or correct known system deficiencies. The unit cost variance between the CSRR Increment 1 Version 3 and Version 4 is due to different capabilities/configurations. For example, CSRR Increment 1 Version 3 is a more complex upgrade to the CSRR suite. CSRR Increment 1 Version 4 is planned to address equipment obsolescence and EOL issues.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                        |                                                                           |
| <p>The Undersea Platforms Special Communications program provides a fully integrated and tested Undersea Assured Command &amp; Control (UAC2) communications system enabling command and control (C2) in an environment where traditional communications are not available, thereby reducing platform susceptibility of detection and attack by the adversary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                        |                                                                           |
| <p>Link 16 provides an enhanced submarine communication system by providing a two-way Tactical Data Link (TDL) processing capability on all Submarine (Nuclear) (SSN) and Guided Missile Submarine (Nuclear) (SSGN) platforms. The Link 16 program provides submarine Command &amp; Control systems with Link 16 tactical network communications capabilities for situational awareness in a contested environment and is a key element in naval tactical networking. The new technology ensures the submarine's continued ability to participate in network-centric warfare and exploit its inherent stealth capabilities in support of the Navy, Nuclear Command, Control, and Communications (NC3), Joint, and allied/coalition fight to achieve total battlespace information dominance.</p>                                                                                                                                                                                                                                                                                                                                                                                     |                                        |                                                                           |

\*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications. Title represents the P-40a Title when only the P-40a Summary/Total is shown.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

**Justification:**

- FY19 Antenna Modifications: Procure and install multiple field change kits for legacy antenna equipment, applicable to all submarine classes, to address performance issues, improve reliability and maintainability, decrease vulnerability, and provide cost effective technology insertion.

- FY19 Towed Buoy Antenna (TBA)(AN/BRR-6/6B): Procure and install various hardware components which are fielded to the Ballistic Missile Submarine (SSBN) fleet to improve system performance (measured by operational availability) and reliability (measured by mean time between failures). FY19 funding increase of \$4.7M over the FY18 budget is due to additional procurements of Tow Cable Equipment and Nests and Inertial Measurement units required to support reliability improvements provide for the procurement and installation of field change kits to improve system performance (measured by operational availability (Ao)) and reliability (measured by mean time between failures (MTBF)); improvements are applicable to SSBN only.

| <p>- FY19 Common Submarine Radio Room (CSRR): Implements CSRR on LOS ANGELES class submarines and modernizes CSRR on OHIO (SSBN/SSGN), SEAWOLF and VIRGINIA platforms. Funding will support procurement of CSRR Increment 1 Version 4, Radio Frequency Distribution and Control Systems (RFDACS) to address Reliability, Maintainability, Availability (RMA) and Environmental Qualification Testing (EQT) deficiencies, Undersea Assured Command &amp; Control (UAC2) Solution 1 and Solution 2, and Link 16 terminals. In addition, funding will support installation of CSRR Increment 1 Version 3, CSRR Increment 1 Version 4, RFDACS (procured as a separate CSRR component but fielded as part of the CSRR Inc1v4 modernization kit installations) and UAC2 Solution 1 and Solution 2. FY19 funding increase of \$1.6M over the FY18 budget is due to UAC2 and Link 16 procurements, not previously procured in FY18.</p> <p>- FY19 Submarine High Data Rate (SubHDR): Radome procurement inventory requirement met in FY17</p> <p>- FY19 Outboard Electronics (OE)-538 &amp; OE-592 antenna group: Procure OE-538A upgrade kits to support submarine communications requirements: Mobile User Objective System (MUOS), Link-16 Tactical Data Link (TDL), and Iridium.</p> |                                               |                                                                                  |

Note: Subtotals or Totals in this Exhibit P-40a may not be exact or sum exactly, due to rounding.

(†) indicates the presence of a P-5a

**Footnotes:**

- (1) Antenna Modifications provide for the procurement and installation of field change kits of legacy antenna equipment (OE-315, AN/BRA-24, AN/BRA-6B, BRT-1/1A, Mast Mechanical Groups (MMG)). These modifications address performance issues, improve reliability and maintainability, decrease vulnerability, and provide cost effective technology insertion. FY19 will procure; 28 - AIS Amplifiers, 20 - Transmit/Receive Switches, 14 - Rotary Lip Seal Assemblies.
- (2) CSRR Support Systems Modernization Kits provide for the procurement and installation of CSRR baseline modernization reconfigurable lab assets to improve system performance and reliability and vary by Increment, Version, and Platform. FY19 includes procurement of seven Undersea Assured Command & Control (UAC2) solution sets to support DoD Teleports, DoN Submarine Broadcast Control Authorities and the CSRR land based submarine radio rooms. In addition, funding will support procurement of two Link 16 terminals for the CSRR land based submarine radio rooms.
- (3) Installation costs are included in procurement (turnkey). Quantities have been updated from PB18 to reflect greater fidelity in procurement unit costs and provide detail of each type of upgrade. Installation costs are included in procurement (turnkey). Quantities have been updated from PB18 to reflect greater fidelity in procurement unit costs and provide detail of each type of upgrade. Tow Cable equipment consists of Tow Cables and Cable Cutters; Nests are used to cradle the buoy. FY18 quantities account for cables only; FY19 includes cables, cutters and nests. Inertial Measurement Unit quantity increase from FY18 to FY19 due as a result of 20 additional Inertial Measurement Units required in FY19 for buoy roll, yaw and pitch stability needs.

**Footnotes:**

- <sup>(6)</sup> OE-538A, OE-538B, and Radio Frequency Distribution and Control System (RFDACS) unit cost varies by submarine class and economic quantity order. All OE-538A upgraded antennas will be upgraded to OE-538B. Installation schedule reflects both OE-538A Antenna and RFDACS upgrade kits. Two (2) antennas procured in FY18 will not be installed until FY20. These antennas were procured in FY18 vice FY19 to meet the early FY20 installation dates. Between PB18 and PB19, the budget was updated to break out Antenna Upgrades "installed" and "not installed", additionally, due to economic order quantity discounts, unit costs were updated. The antennas that are not installed are part of the rotatable pool required to meet implementation plan.
- <sup>(7)</sup> RFDACS unit cost varies based on submarine class. RFDACS procurement in support of OE-538A implementation outside the normal CSRR version upgrade.
- <sup>(8)</sup> Increase in support cost due to increase in installations from 9 in FY18 to 28 in FY19.

| <b>Method of Implementation (Organic):</b> Equipment - RFDACS Mod Kits (Inc 1 Ver 4)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |            |                |           |           |           |                |           |           |           |                                                                                  |           |           |           |                |                        |           |           |                |           |                                                                                |           | <b>Installation Quantity:</b> 0 |           |           |           |                |           |           |           |           |            |
| <p><b>Footnotes:</b></p> <p>(9) Quantities reflect alignment with fleet installation availabilities. Submarine availability windows fluctuate to optimize SSBN Operational Availability (Ao). The number and class of submarines available in any given year are very limited and, consequently, the ability to shift installations from one submarine to another is often not possible. Three CSRR Inc1V3 procurements in FY17 will not install until Q4 FY18 and one in Q2 FY19 due to Fleet rescheduling of availabilities.</p> <p>(10) The unit cost variance between the CSRR Increment 1 Version 3 and Version 4 is due to different capabilities/configurations. For example, CSRR Increment 1 Version 3 is a more complex upgrade to the CSRR suite. CSRR Increment 1 Version 4 is planned to address equipment obsolescence and EOL issues. FY19 includes procurement of five CSRR Increment 1 Version 4 modernization kits.</p> <p>(11) FY19 includes procurement of five Radio Frequency Distribution and Control Systems (RFDACS) to address Reliability, Maintainability, Availability (RMA) and Environmental Qualification Testing (EQT) deficiencies. RFDACS is procured as a separate CSRR Component but fielded as part of the CSRR Inc1v4 modernization kit installations.</p> <p>(12) Funding supports development and planning of ShipALT design package, work element descriptions and design/GFI changes. The ShipALT design package is required the year prior to procurement because it is requested by the planning yard 12 months prior to install. It is also required the year that the first modernization kit or Undersea Assured Command &amp; Control (UAC2) solution is procured for each CSRR version on each Class to meet ship construction deadlines.</p> <p>(13) The Enterprise Change Request (ECR) is a configuration control process rigorously implemented for the approval of new CSRR baselines or for changes to C4I systems produced by other Component Programs of Record (PORs) that impact the CSRR baseline. These changes to other Component PORs frequently occur outside of a planned CSRR modernization and therefore, funding for these changes is required every fiscal year in order to speed the delivery of critical capabilities to the submarine force.</p> <p>(14) Funds the initial logistics package, consisting of multiple individual products, for each modernization baseline (version). The logistics package is funded in the year prior to and the year that the first modernization kit or UAC2 solution is procured for each CSRR version on each submarine class.</p> <p>(15) Production lead time for CSRR upgrade kits varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.</p> <p>(16) Production lead time for UAC2 Solution 1 and 2 varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.</p> |            |                |           |           |           |                |           |           |           |                                                                                  |           |           |           |                |                        |           |           |                |           |                                                                                |           |                                 |           |           |           |                |           |           |           |           |            |

| Out                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 12         | -                              | -         | -                              | -         | -                              | -         | -                              | 1         | 1                                                                                | -         | -                              | -         | -                              | -                      | 3                              | 2         | 1                              | -         | -                                                                              | 2         | 2                              | -         | -                              | -         | 1              | -         | -         | -         | -         | 25         |
| <b>Footnotes:</b><br><sup>(17)</sup> Quantities reflect alignment with fleet installation availabilities. The number and class of submarines available in any given year are very limited and consequently, the ability to shift installations from one submarine to another is often not possible. CSRR modernization activities bring new capabilities, address new requirements, resolve End-of-Life (EOL) and obsolescence issues or correct known system deficiencies. The unit cost variance between the CSRR Increment 1 Version 3 and Version 4 is due to different capabilities/configurations. For example, CSRR Increment 1 Version 3 is a more complex upgrade to the CSRR suite. CSRR Increment 1 Version 4 is planned to address equipment obsolescence and EOL issues. FY19 includes procurement of two CSRR Increment 1 Version 4 modernization kits.<br><sup>(18)</sup> The Enterprise Change Request (ECR) is a configuration control process rigorously implemented for the approval of new CSRR baselines or for changes to C4I systems produced by other Component Programs of Record (PORs) that impact the CSRR baseline. These changes to other Component PORs frequently occur outside of a planned CSRR modernization and therefore, funding for these changes is required every fiscal year in order to speed the delivery of critical capabilities to the submarine force.<br><sup>(19)</sup> Funding supports development and planning of ShipALT design package, work element descriptions and design/GFI changes. The ShipALT design package is required the year prior to procurement because it is requested by the planning yard 12 months prior to install. It is also required the year that the first modernization kit, Undersea Assured Command & Control (UAC2) solution, or Link 16 terminal is procured for each CSRR version on each Class to meet ship construction deadlines.<br><sup>(20)</sup> Funds the initial logistics package, consisting of multiple individual products, for each modernization baseline (version). The logistics package is funded in the year prior to and the year that the first modernization kit, UAC2 solution, or Link 16 terminal is procured for each CSRR version on each submarine class. Data/logistics funds are required in FY2022 to support C4I systems procured by other Component Programs of Record (PORs) that impact the CSRR baseline. These funds are required to develop allowance parts list (APLs) and interactive electronic technical manuals (IETMS).<br><sup>(21)</sup> Production lead time for upgrade kits varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.<br><sup>(22)</sup> Production lead time for UAC2 Solution 1 and 2 varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized. |            |                                |           |                                |           |                                |           |                                |           |                                                                                  |           |                                |           |                                |                        |                                |           |                                |           |                                                                                |           |                                |           |                                |           |                |           |           |           |           |            |

**Footnotes:**

- <sup>(23)</sup> Quantities reflect alignment with fleet installation availabilities. The number and class of submarines available in any given year are very limited and consequently, the ability to shift installations from one submarine to another is often not possible. CSRR modernization activities bring new capabilities, address new requirements, resolve End-of-Life (EOL) and obsolescence issues or correct known system deficiencies. The unit cost variance between the CSRR Increment 1 Version 3 and Version 4 is due to different capabilities/configurations. For example, CSRR Increment 1 Version 3 is a more complex upgrade to the CSRR suite. CSRR Increment 1 Version 4 is planned to address equipment obsolescence and EOL issues. FY19 includes procurement of one CSRR Increment 1 Version 4 modernization kit.
- <sup>(24)</sup> Funding supports development and planning of ShipALT design package, work element descriptions and design/GFI changes. The ShipALT design package is required the year prior to procurement because it is requested by the planning yard 12 months prior to install. It is also required the year that the first modernization kit, Undersea Assured Command & Control (UAC2) solution, or Link 16 terminal is procured for each CSRR version on each Class to meet ship construction deadlines.
- <sup>(25)</sup> The Enterprise Change Request (ECR) is a configuration control process rigorously implemented for the approval of new CSRR baselines or for changes to C4I systems produced by other Component Programs of Record (PORs) that impact the CSRR baseline. These changes to other Component PORs frequently occur outside of a planned CSRR modernization and therefore, funding for these changes is required every fiscal year in order to speed the delivery of critical capabilities to the submarine force.
- <sup>(26)</sup> Funds the initial logistics package, consisting of multiple individual products, for each modernization baseline (version). The logistics package is funded in the year prior to and the year that the first modernization kit, UAC2 solution, or Link 16 terminal is procured for each CSRR version on each submarine class.
- <sup>(27)</sup> Production lead time for upgrade kits varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.
- <sup>(28)</sup> Production lead time for UAC2 Solution 1 and 2 varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.

| <b>Footnotes:</b><br><sup>(29)</sup> Quantities reflect alignment with fleet installation availabilities. The number and class of submarines available in any given year are very limited and consequently, the ability to shift installations from one submarine to another is often not possible. CSRR modernization activities bring new capabilities, address new requirements, resolve End-of-Life (EOL) and obsolescence issues or correct known system deficiencies. The unit cost variance between the CSRR Increment 1 Version 3 and Version 4 is due to different capabilities/configurations. For example, CSRR Increment 1 Version 3 is a more complex upgrade to the CSRR suite. CSRR Increment 1 Version 4 is planned to address equipment obsolescence and EOL issues. FY19 includes procurement of five CSRR Increment 1 Version 4 modernization kits.<br><sup>(30)</sup> FY19 includes procurement of four Radio Frequency Distribution and Control Systems (RFDACS) to address Reliability, Maintainability, Availability (RMA) and Environmental Qualification Testing (EQT) deficiencies. RFDACS is procured as a separate CSRR Component but fielded as part of the CSRR Inc1v4 modernization kit installations.<br><sup>(31)</sup> Funding added in FY19 for three Link 16 terminals to improve system performance and reliability.<br><sup>(32)</sup> Funds the initial logistics package, consisting of multiple individual products, for each modernization baseline (version). The logistics package is funded in the year prior to and the year that the first modernization kit, Undersea Assured Command & Control (UAC2) solution, or Link 16 terminal is procured for each CSRR version on each submarine class.<br><sup>(33)</sup> Funding supports development and planning of ShipALT design package, work element descriptions and design/GFI changes. The ShipALT design package is required the year prior to procurement because it is requested by the planning yard 12 months prior to install. It is also required the year that the first modernization kit, UAC2 solution, or Link 16 terminal is procured for each CSRR version on each Class to meet ship construction deadlines.<br><sup>(34)</sup> The Enterprise Change Request (ECR) is a configuration control process rigorously implemented for the approval of new CSRR baselines or for changes to C4I systems produced by other Component Programs of Record (PORs) that impact the CSRR baseline. These changes to other Component PORs frequently occur outside of a planned CSRR modernization and therefore, funding for these changes is required every fiscal year in order to speed the delivery of critical capabilities to the submarine force.<br><sup>(35)</sup> Production lead time for upgrade kits varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.<br><sup>(36)</sup> Production lead time for UAC2 Solution 1 and 2 varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized. |            |                                       |                                       |                                       |                                       |                                       |                                       |                                       |                                       |                                                                                  |                                       |                                       |                                       |                                       |                                       |           |           |                |           |                                                                                   |           |                |           |           |           |                |           |           |           |                                 |            |  |  |  |  |  |  |  |  |

**Footnotes:**

- (37) Quantities reflect alignment with fleet installation availabilities. The number and class of submarines available in any given year are very limited and consequently, the ability to shift installations from one submarine to another is often not possible. CSRR modernization activities bring new capabilities, address new requirements, resolve End-of-Life (EOL) and obsolescence issues or correct known system deficiencies. The unit cost variance between the CSRR Increment 1 Version 3 and Version 4 is due to different capabilities/configurations. For example, CSRR Increment 1 Version 3 is a more complex upgrade to the CSRR suite. CSRR Increment 1 Version 4 is planned to address equipment obsolescence and EOL issues. FY19 includes procurement of eight CSRR Increment 1 Version 4 modernization kits.
- (38) Funding added in FY19 for five Link 16 terminals to improve system performance and reliability
- (39) The Enterprise Change Request (ECR) is a configuration control process rigorously implemented for the approval of new CSRR baselines or for changes to C4I systems produced by other Component Programs of Record (PORs) that impact the CSRR baseline. These changes to other Component PORs frequently occur outside of a planned CSRR modernization and therefore, funding for these changes is required every fiscal year in order to speed the delivery of critical capabilities to the submarine force.
- (40) Funding supports development and planning of ShipALT design package, work element descriptions and design/GFI changes. The ShipALT design package is required the year prior to procurement because it is requested by the planning yard 12 months prior to install. It is also required the year that the first modernization kit, Undersea Assured Command & Control (UAC2) solution, or Link 16 terminal is procured for each CSRR version on each Class to meet ship construction deadlines.
- (41) Funds the initial logistics package, consisting of multiple individual products, for each modernization baseline (version). The logistics package is funded in the year prior to and the year that the first modernization kit, UAC2 solution, or Link 16 terminal is procured for each CSRR version on each submarine class.
- (42) DSA Recurring Cost includes funding for CSRR planning yard activities.
- (43) Production lead time for upgrade kits varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.
- (44) Production lead time for UAC2 Solution 1 and 2 varies from 3 to 12 months depending on the contents of each kit and the specific components being modernized.

**Description:**  
The FY 2019 funding request was reduced by \$2.000 million to account for the availability of prior year execution balances.

The Satellite Communications (SATCOM) Systems P-1 line provides funds for procurement of shipboard terminal equipment for ship-to-ship, ship-to-shore and ship-to-aircraft tactical communications via earth orbiting relay satellites. This includes Radio Frequency (RF) equipment and baseband equipment assembled and grouped into systems and subsystems structured to address specific naval communications requirements. These systems provide modem processors and peripheral equipment that control the RF links for message traffic, direct data transfer and secure voice communications. They are selected and oriented by communications traffic levels, types of communications and operational missions. CBSP technical refresh of system modems and Ka Kits will directly support Assured Command and Control (AC2) posture, SATCOM reliability, space resiliency via band diversity and redundancy. AC2 modems enable the use of Wideband Global Satellite (WGS) X-Band (ship/submarine transmit and receive) and Ka-band (shore receive and transmit) resources to maintain link connectivity to provide assured access to mission critical communications in Anti-Access Anti-Denial (A2AD) jamming environments.

[P3A / (NR117) Global Broadcast Service (GBS)]: GLOBAL BROADCAST SERVICE (GBS - NR117): GBS is a Joint Military Satellite Communications (MILSATCOM) program with the Air Force as Executive Agent for all services. GBS provides a continuous, high speed, one way information flow of high volume data to units ashore, afloat or special operations. GBS supports routine operations, training and military exercises, special activities, crises, situational awareness, weapons targeting, reconnaissance and the transition to and conduct of opposed operations short of nuclear war. Deployment of GBS internet protocol (IP) terminals will allow expanded use of military intelligence collection in a broader spectrum using MILSATCOM architecture. The Navy GBS Split IP effort enables near-real-time duplex asymmetric communications connectivity to ships/subs. GBS plays a pivotal role to support the Assured Command and Control (AC2) environment.

[P3A - 2 / (NR112) Commercial Broadband Satellite program (CBSP) - Afloat]: The Navy's next generation Commercial Satellite Communications (SATCOM) program provides the only source of wideband SATCOM to Patrol Coastal (PCs) and Mine Countermeasure Ships (MCMs), diversity for MILSATCOM on Unit Level Variant (ULV) ships, and augments MILSATCOM on Force Level Variant (FLV) ships. CBSP will support the procurement and installation of a commercial terminal and service architecture that significantly increase data throughput, Navy Anti-Access Area Denial posture, and SATCOM reliability and space resiliency by providing band diversity, assured access, and redundancy for MILSATCOM. Included in the program are Small Ship Variant (SSV - Patrol Coastal or Mine Countermeasure Ships), Unit Level Variant (ULV - examples are Guided Missile Destroyers or Guided Missile Frigates), and Force Level Variant (FLV - large combatant ships such as carriers).

\*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

**Justification:**

The FY 2019 funding request increases to meet Assured Command and Controls (AC2) requirements for Global Broadcast System (GBS) afloat terminal, GBS portable receive terminal, and Commercial Broadband Satellite Program (CBSP) Unit level variants (ULV). And specifically, the FY 2019 funding request increase provides for the continued procurement of both Afloat and Portable Global Broadcast System (GBS) Program Receive Terminals and establishes an Engineering Change Order (ECO) to meet the Navy's Microsoft Windows 10 requirement Cyber Security Mandate (dated 08 December 2016). The ECO procures Public Key Infrastructure (PKI) hardware, engineering services and installations to support critical information assurance to the Fleet. The FY 2019 funding request increase also provides for Commercial Broadband Satellite Program (CBSP) procurement and installation of Unit Level Variant (ULV) terminals. And continues the procurement and installation of CBSP modem technical refresh and begins procurement and installation of Ka Kit upgrades which are both in support of Assured Command and Control (AC2). FY 2019 Non-Recurring Engineering (NRE) for Ka Kits will fund the CBSP Original Equipment Manufacturer (OEM) to design and develop a Force Level Variant (FLV) upgrade kit to replace the existing C/Ku-band feed assembly with a C/Ka-band feed assembly.

The FY 2019 funding request was reduced by \$2.100 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

| <b>Description:</b><br>GLOBAL BROADCAST SERVICE (GBS - NR117): GBS is a Joint Military Satellite Communications (MILSATCOM) program with the Air Force as Executive Agent for all services. GBS provides a continuous, high speed, one way information flow of high volume data to units ashore, afloat or special operations. GBS supports routine operations, training and military exercises, special activities, crises, situational awareness, weapons targeting, reconnaissance and the transition to and conduct of opposed operations short of nuclear war. Deployment of GBS internet protocol (IP) terminals will allow expanded use of military intelligence collection in a broader spectrum using MILSATCOM architecture. The Navy GBS Split IP effort enables near-real-time duplex asymmetric communications connectivity to ships/subs. GBS plays a pivotal role to support the Assured Command and Control (AC2) environment. |                    |                |                |                                                                                 |                    |                      |                        |                |                |                                                                                   |                    |                |

| <p>(2) 1. NR117: FY18 Portable Receive Terminal procurements increased from PB 18 due to the FY18 funds realignment from the CBSP Program to support the WINDOWS 10 Mandate for PKI upgrade implementation. 2. GBS Portable Receive Terminals are turn-key and therefore do not have installation costs associated with them. 3. FY 2019 \$3.2M Other Contingency Operations (OCO) funding procures quantity 13 Portable GBS Systems for expanding Navy SEAL combat operations in US Central Command (CENTCOM) and other Areas of Responsibility (AORs). Increased operational use has reduced service life of legacy Portable GBS systems.</p> <p>(3) FY19 DSA cost growth supports increased installations from Qty 1 in FY18 to Qty 12 in FY19.</p> <p>(4) Engineering Change Order (ECO) is required to implement Cybersecurity upgrades to increase system performance for fielded GBS Afloat Receive Terminals and Portable Receive Terminals. A portion of FY17 funding began Non-Recurring Engineering (NRE) to support end to end integration testing for Public Key Infrastructure (PKI) implementation. FY17 GBS funds were also realigned to CBSP Program (NR112) to accelerate a Dual Force Level Variant (FLV) antenna with installation planned for FY18. FY18-21 procures and installs Win 10 PKI upgrades and performs associated integration, assembly and test.</p> |                                                                                 |                                                                                   |

| <b>Description:</b><br>The Navy's next generation Commercial Satellite Communications (SATCOM) program provides the only source of wideband SATCOM to Patrol Coastal (PCs) and Mine Countermeasure Ships (MCMs), diversity for Military Satellite Communications (MILSATCOM) on Unit Level Variant (ULV) ships, and augments MILSATCOM on Force Level Variant (FLV) ships. CBSP will support the procurement and installation of a commercial terminal and service architecture that significantly increase data throughput, Navy Anti-Access Area Denial posture, and SATCOM reliability and space resiliency by providing band diversity, assured access, and redundancy for MILSATCOM. Included in the program are Small Ship Variant (SSV - Patrol Coastal or Mine Countermeasure Ships), Unit Level Variant (ULV - examples are Guided Missile Destroyers or Guided Missile Frigates), and Force Level Variant (FLV - large combatant ships such as carriers). |                    |                |                |                     |                                                                                 |                      |                        |                |                |                                                                                                              |                    |                   |

| <p><sup>(6)</sup> 1. Force Level Variant (FLV) terminals include single and dual antenna configurations which influences average unit cost. FY17 funding reflects a realignment from the GBS Program and increases procurements from Qty 1 (single FLV antenna \$1.830M) to Qty 2 for a dual FLV antenna (\$2.776M). 2. FY17 Qty 1 install shifted to FY18 due to availability change for AS 39 vessel EMORY S. LAND. FY17 Install funds are provided to cover installation cost overruns. 3. FY18 ECO and DSA adjustments are due to a reprioritization to cover Qty 1 install increase.</p> <p><sup>(7)</sup> Engineering changes required to implement bandwidth efficiency technologies to increase system performance for fielded Small Ship Variants (SSV) and Force Level Variants (FLV). Beginning in FY19, NRE funding supports both SSV and FLV, while FY18 and prior funded SSV only.</p> <p><sup>(8)</sup> DSA estimates are based off of a percentage of the total installation, with 75% of costs being required the year prior (Qty 3 DDGs installed in FY20) for all pre-installation design work and 25% required the year of the actual installation (Qty 1 DDG installed in FY19). The FY18 to FY19 DSA cost variance is due to increased ship quantities being installed.</p> |                                                                                 |                                                                                                           |

**Description:**

The Joint Ultra-High Frequency (UHF) Military Satellite Communication (MILSATCOM) Network Integrated Control System (JMINI CS) is a legacy system that commenced in 1998. JMINI CS is a Navy-led, Joint interest program providing integrated, dynamic, and centralized control of non-processed UHF MILSATCOM 5 and 25 kHz Demand Assigned Multiple Access (DAMA) and Demand Assigned Single Access (DASA) channels to maximize existing highly sought after SATCOM resources used to support operational strike missions as well as joint training and tactical exercises. The system provides decentralized web-based management of those resources for use as a situational awareness tool for Combatant Commanders and SATCOM Support Centers. The JMINI CS is required to operate beyond the original End of Life (EoL) in 2015 in order to continue to support mission critical operations through at least 2033. The globally integrated system consists of three major subsystems: Network Management System, Satellite Access Controller and the control terminals. The JMINI CS system refresh effort will replace obsolete and unsupported components or subsystems while maintaining interoperability with existing systems. Design and integration efforts were funded with RDTEN.

| <p><sup>(9)</sup> FY19 Average unit cost decrease compared to FY18 reflects upgraded modems buys that are less costly compared to new replacement modems that were procured in FY18. Procurements include a mix of upgraded modems, new replacement modems, and peripheral equipment required for this technology refresh. FY19 Installation unit cost increase compared to FY18 is due to the number of modems required by ship class and platform type. For example, a Dual Force Level Variant requires Qty 2 modem installations as compared to a Single Unit Level Variant (ULV) requiring Qty 1 modem.</p> <p><sup>(10)</sup> FY18 procures 20 new replacement modems for shore sites that do not require installation.</p> |                                                                                 |                                                                                             |

**Description:**

Current National focus is on highly contested environments and has highlighted a growing need of protected communications, specifically in a satellite denied environment. Assured Command and Control (AC2) Ka Band Kits will increase band diversity and access to Wideband Global SATCOM (WGS) and mitigates risk of loss of Beyond Line of Sight (BLOS) wideband communications in a SATCOM-denied environment for the CBSP Program. With this capability, CBSP will be able to reduce risk of loss of C2 communications on Unit Level Variant (ULV)/ Field Level Variant (FLV) class Combatant ships in a denied environment which would assure Command and Control (C2) including ISR, NIPR/SIPR, VTC, and other critical capabilities. FY19 supports the procurement and installation of 3 ULV Kits.

| <b>Footnotes:</b><br><sup>(11)</sup> FY19 supports the procurement and installation of 3 ULV Ka Kits in an effort to reduce risk of loss of C2 communications on Unit Level Variant (ULV) class Combatant ships in a denied environment which would assure Command and Control (C2).<br><sup>(12)</sup> FY19 Non-Recurring Engineering (NRE) will fund the CBSP Original Equipment Manufacturer (OEM) to design and develop a Force Level Variant (FLV) upgrade kit to replace the existing C/Ku-band feed assembly with a C/Ka-band feed assembly. The design will be consistent with the current feed assembly which will allow for replacement without changing the design of the FLV terminal. |            |                                       |                                       |                                       |                                       |                                       |                                       |                                       |                                       |                                                                                 |                                       |                                       |                                       |                                       |                        |           |           |                |           |                                                         |           |                |           |           |           |                |           |           |           |           |            |

**Description:**

The Navy Multiband Terminal (NMT) System provides funds for procurement of ship, submarine, and shore protected and wideband Military Satellite Communications (MILSATCOM) terminals via earth orbiting relay satellites in the Super High Frequency, Ka, and Extremely High Frequency (EHF) bands. The NMT provides warfighters with the assured, jam resistant, secure SATCOM for message traffic, data transfer and secure voice communications. These procurements are scheduled to meet the satellite communications requirements established by the Chief of Naval Operations in the Fleet Communications Planning and Programming documents.

NAVY MULTIBAND TERMINAL (NMT - NS108): The NMT program is the next generation maritime military satellite communications terminal. The NMT Program is the required Navy component to the Advanced Extremely High Frequency (AEHF) Program for enhancing protected and survivable satellite communications to Naval forces. NMT multiband communication capabilities will communicate two way Ka-Band on Wideband Global SATCOM (WGS) and shipboard and submarine terminals to communicate with X-Band using the Defense Satellite Communications System and WGS. NMT is compatible with today's Navy Low Data Rate/Medium Data Rate terminals, X-Band terminals and will sustain the MILSATCOM architecture by providing connectivity across the spectrum of mission areas, to include land, air and naval warfare, special operations, strategic nuclear operations, strategic defense, theater missile defense, and space operations and intelligence. The NMT system will replenish and improve on the capabilities of both the Military Strategic and Tactical Relay System (MILSTAR) and WGS system by equipping the warfighters with the assured, jam resistant, secure communications as described in the Operational Requirements Document (Wideband Gapfiller System ORD, AFSPC ORD 004-99, May 3, 2000) for the joint AEHF Satellite Communications and WGS System.

The NMT protected system AN/WSC-9 V (Variant) is comprised of three configurations for ships, submarines and shore sites known as Communication Groups. Terminal Communication Groups will integrate protected and wideband signal processing to multiband Antenna Groups. The Antenna Groups align to the specific Terminal Variant for ship, submarine and shore platforms and provides the SATCOM capabilities known as Q/Ka and X/Ka assigned to platforms. NMT includes the Advanced Time Division Multiple Access (TDMA) Interface Processor (IP) and supports increased data transfers for the Automated Digital Network System (ADNS) router architecture supporting improved Quality of Service (QoS) capability, smaller form factor and easier integration into operational environments, further supporting network user access to protected MILSATCOM connectivity. Technical refresh of modems and the associated architectures will directly support Assured Command and Control (AC2) posture, SATCOM reliability, space resiliency via band diversity and redundancy. AC2 modems enable the use of Wideband Global Satellite (WGS) X-Band (ship/submarine transmit and receive) and Ka-band (shore receive and transmit) resources to maintain link connectivity to provide assured access to mission critical communications in jamming environments.

\*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

**Justification:**

This exhibit has been updated to include more refined cost estimates for the fielding of Assured Command and Control (AC2) modems and Advanced Time Division Multiple Access Interface Processor (ATIP) and for fact of life changes such as installation availability shifts. The FY19 funding increase provides for the procurement and installation of NMT terminals, AC2 modems, ATIPS, Ashore antennas and X/Ka Back-Fits. Specifically, the FY19 funding request provides for the procurement of 6 NMT terminals and the installation of 15 NMT terminals to align with earliest remaining installation availabilities.

As the program nears Full Operational Capability (FOC), the hardware being procured supports specific ship platform variants. Should an installation slip, the hardware for that platform cannot necessarily be aligned to a different platform creating an appearance of ahead of need for prior year procurements.

| <p><b>Description:</b><br/>         (Afloat Ship) (Afloat Sub): Provides jam resistant, low probability of interception and detection for protected extended data rate communications with Advanced Extremely High Frequency (AEHF) capability.</p> <p>The FY19 request provides for the procurement of 4 NMT shipboard terminal and the installation of 12 NMT shipboard terminals to align with earliest remaining installation availabilities. Budget updates also include the breakout of Integration, Assembly and Test (IA&amp;T) and System Operational Verification Test (SOVT) costs. IA&amp;T efforts are performed once terminals and antennas are delivered from Raytheon Production Facilities to the government site SSC Atlantic, Charleston SC. SSC Atlantic serves as the lead integrator and performs Pre-Installation, Test and Check-Out (PITCO) of the terminals and antennas required for NMT ship and submarine afloat platforms. SOVT efforts are performed by SSC Atlantic, Charleston, SC and SSC Pacific, San Diego, CA and validate the NMT system is operational post installation on afloat platforms.</p> |                    |                |                |                                                                              |                    |                      |                        |                |                |                                                                                           |                    |                  |

| <sup>(1)</sup> 1. FY19 request provides for the procurement and installation of NMT afloat terminals and reflects current Raytheon contract pricing. Integration, Assembly and Test (IA&T) and System Operational Verification Test (SOVT) engineering services are required to deliver and install the NMT Terminal System. 2. FY19-FY23 continues the installation of NMT Terminals. Prior Year (PY) procurements installed in FY19 align to specific ship and submarine NMT configurations. NMT scheduled installations are dependent on limited ship and submarine availabilities as the program nears Full Operational Capability (FOC). |            |                                |           |                                |           |                                |           |                                |           |                                                                              |           |                                |           |                                |                                        |                                |           |                                |           |                                                                                           |           |                                |           |                                |           |                |           |           |           |           |            |

| <p>Installation costs are based on current program office estimates. 3. IA&amp;T costs are budgeted in the year of the hardware delivery. Procurement Lead Time (PLT) is 15 months to deliver the first terminal. Deliveries continue over a 12-month period with the last delivery occurring 27 months after award. For example, the last terminal delivery from the FY15 prior year buy is scheduled March 2017. 4. The FY19 Shipboard procurement unit cost is lower than the FY18 cost due to the Economic Order Quantity (EOQ) savings. 5. System Operational Verification Test (SOVT) costs are tied to the end of the installation availability. 6. NMT scheduled installations are dependent on limited ship and submarine availabilities as the program nears FOC. Install cost fluctuations are driven by the configuration of the NMT system and the platform type. For example, estimated installation cost for a LHD 1 class (large deck) platform with dual Q/X/Ka capability is approximately three times greater than a DDG 51 class platform (small deck) with the same Q/X/Ka capability. Large deck ships consist of 2 Terminal Communication Groups with 4, 5, or 6 antennas. The antenna mix is dependent on the specific configuration requirement for each ship. For example, Small deck ships consist of 1 Terminal Communication Group with 2, 3, or 4 antennas. There are 13 variants of the NMT and antenna size varies by class (ranging from 54" to 96").</p> |                                                                              |                                                                                           |

**Description:**

The FY19 request provides for the procurement of 2 NMT shore terminals to align with earliest remaining installation availabilities. Budget updates also include the breakout of Integration, Assembly and Test (IA&T) and System Operational Verification Test (SOVT) costs. IA&T efforts are performed once terminals and antennas are delivered from Raytheon Production Facilities to the government site SSC Atlantic, Charleston SC. SSC Atlantic serves as the lead integrator and performs Pre-Installation, Test and Check-Out (PITCO) of the terminals and antennas required for NMT shore platforms. SOVT efforts are performed by SSC Atlantic, Charleston, SC and SSC Pacific, San Diego, CA and validate the NMT system is operational post installation on ashore platforms.

[Ashore] Provides jam resistant, low probability of interception and detection for protected extended rate communications with Advanced Extremely High Frequency (AEHF) capability.

| <sup>(2)</sup> 1. FY19 request provides for the procurement and installation of NMT shore terminals and reflects current Raytheon contract pricing. Integration, Assembly and Test (IA&T) and System Operational Verification Test (SOVT) engineering services are required to deliver and install the NMT Terminal System. 2.FY19-FY23 continues the installation of NMT Terminals. Installation costs are based on current program office estimates. 3. IA&T costs are budgeted in the year of the hardware delivery. Procurement Lead Time (PLT) is 15 months to deliver the first terminal. Deliveries continue over a 12-month period |            |                                |           |                                |           |                                |           |                                |           |                                                                              |           |                                |           |                                |                                        |                                |           |                                |           |                                                                                           |           |                                |           |                                |           |                |           |           |           |           |            |

**Description:**

X/Ka Backfits continue to be fielded on platforms with NMT Q/Ka Ship terminals that were procured during Low Rate Initial Production (LRIP) and require the wideband capability that the X/Ka Antenna Group provides. The X/Ka hardware was unavailable during the first two years of production but is required to provide the full Wideband capability to the Fleet.

Budget updates also include the breakout of Integration, Assembly and Test (IA&T) and System Operational Verification Test (SOVT) costs. IA&T efforts are performed once terminals and antennas are delivered from Raytheon Production Facilities to the government site SSC Atlantic, Charleston SC. SSC Atlantic serves as the lead integrator and performs Pre-Installation, Test and Check-Out (PITCO) of the terminals and antennas required for NMT shore platforms. SOVT efforts are performed by SSC Atlantic, Charleston, SC and SSC Pacific, San Diego, CA and validate the NMT system is operational post installation on ashore platforms.

| <b>Footnotes:</b><br><sup>(3)</sup> 1. Fielded platforms with the Q/Ka configuration require an X/Ka backfit, which has additional costs dependent on platform (large vs small deck). IA&T costs are budgeted in the year of the hardware delivery. Procurement Lead Time (PLT) is 15 months to deliver the first terminal. Deliveries continue over a 12-month period with the last delivery occurring 27 months after award. For example, the last terminal delivery from the FY15 prior year buy is scheduled March 2017. NMT scheduled installations are dependent on limited ship availabilities as the program nears FOC.<br><sup>(4)</sup> Procurements completed in prior years. |            |                                |                                |                                |                                                                              |                                |                                |                                |                                |                                |                                |                                |                                |                |                                                          |           |                |                |           |                |           |                |           |           |           |                |           |           |           |           |            |

**Description:**

The original NMT acquisition strategy was to re-use legacy FOT Shore Antennas that would be refurbished. However, antennas coming in for overhaul were in worse than expected condition; all required major overhaul parts including bearings, cable assemblies, motors, slip rings, and rotary joints. Refurbished FOT antennas posed long-term supportability problems due to obsolescence. Therefore, in Prior Year procurements (PY FY15), the program office procured 17 Shore antennas to provide optimal capability to the fleet.

PB19 NMT budget includes the breakout of Integration, Assembly and Test (IA&T) efforts which are performed once the Ashore Antennas are delivered from Raytheon Production Facilities to the government site at SSC Atlantic, Charleston SC. SSC Atlantic serves as the lead integrator and performs Pre-Installation, Test and Check-Out (PITCO) of the antennas required for NMT shore platforms. NMT Installations include System Operational Verification Test (SOVT) which are performed by SSC Atlantic, Charleston, SC and SSC Pacific, San Diego, CA and validate the NMT antenna is operational post installation on shore sites.

[NMT Ashore Antennas] Shore Antennas comprise of a Q Band configuration to provide SATCOM capabilities.

| <b>Footnotes:</b><br><sup>(5)</sup> 1. FY18-FY23 Ashore Antenna fielding changes are due to program reprioritization to support NMT Ashore site capabilities. 2. FY18 Integration, Assembly and Test (IA&T) engineering services are required for the final delivery of NMT Terminal Antennas procured in prior years. 3. FY18-FY20 System Operational Verification Test (SOVT) costs represent the effort to operationally verify the capability following the completion of the antenna installation at Shore sites.<br><sup>(6)</sup> Procurements completed in prior years. |            |                                |           |                                |           |                                |           |                                |           |                                                                              |           |                                |           |                                |                                     |                                |           |                                |           |                                                                |           |                                |           |                                |           |                |           |           |           |           |            |

**Description:**

Initial NMT procurements included the Time Division Multiple Access (TDMA) Interface Processor (TIP) pending the development of the Advanced Time Division Multiple Access (TDMA) Interface Processor (IP). Although ATIP is required to receive NMT's full netted communications capability over the Extreme Data Rate (XDR), it also is fielded independently of NMT as a Back-Fit to replace the legacy TIP's from the Fleet thereby improving Cyber Security posture and Reliability of the system. ATIPs require Integration, Assembly and Test (IA&T). IA&T efforts are performed once ATIPS are delivered from COMTECH to the government sites at SSC Pacific, San Diego, CA. SSC Pacific serves as lead integrator and performs Pre-Installation, Test and Check-Out (PITCO) of the modems required for NMT ship and submarine afloat platforms. NMT Installation updates include System Operational Verification Test (SOVT). SOVT efforts are performed by SSC Pacific, San Diego, CA and validate ATIPS are operational post installation on afloat platforms and ashore sites.

| <b>Footnotes:</b><br><sup>(9)</sup> 1. FY18-FY21 AC2 Modem procurement and installation updates are the results of more refined cost estimates. The AC2 modems will be fielded at 7 DISA shore teleport sites and on 143 ship platforms. Qty 48 modems are required for each DISA shore site for a total of 336 shore modems. FY19 funds the procurement and installation of Qty 50 shipboard platforms and Qty 4 Shore sites (Shore total Qty 192). 2. FY18-FY21 DSA costs were included in previous budget submissions but have since been removed as the AC2 modem installation will be performed as an Engineering Change and do not require a 75%/25% DSA planning structure. 3. Ship Modem installations will take place during a Window of Opportunity (WOO) availability that includes a 8 day window to perform and complete the installation. |            |                                |                                |           |                                |                |                                |           |                                |                                                                              |                                |           |                                |                                    |                                |           |                                |                |                                |                                                              |                                |                |                                |           |           |                |           |           |           |           |            |

## Description:

The Joint Communications Support Element (JCSE) Program is responsible for procuring hardware and software to support Defensive Cyber Operations, Transport technologies (narrowband, wideband and protected satellite communications), C4 Architecture (network elements that provide access to the Defense Information Systems Network (DISN) cloud), and C2 On-The-Move (land, air and ground based tactical capabilities) in concert with Strategic Planning Guidance. JCSE's Modernization Program is structured around Combatant Command (CCMD) requirements using emerging technologies. Services formally influence JCSE's acquisition plan through semi-annual program reviews and make recommendations in concert with Major Defense Acquisition Program (MDAP) schedules, ensuring that Service dollars meet Joint Service requirements. The modernization program goals include meeting emerging real-world operational requirements with improved capabilities, smaller footprint, reduced operations and maintenance costs, and seamless integration with the global information grid.

This line funds the Department of the Navy's portion of the JCSE Program. This program is jointly funded by Army, Navy, Marine Corps, and Air Force in support of Joint Tactical Force and Joint Special Operations Task Force Headquarters.

**Description:**

The Information Systems Security Program (ISSP) ensures the protection of Navy and joint cyberspace systems from exploitation and attack. Systems include wired and wireless telecommunications systems, cybersecurity systems, and the content processed, stored, or transmitted therein. ISSP includes protection of the Navy's National Security Systems (NSS).

The rapid change in the underlying commercial and government cyber infrastructures makes cybersecurity an increasingly complex and dynamic problem. ISSP provides the Navy's warfighter the essential information trust characteristics of availability, confidentiality, integrity, authentication, and non-repudiation. Cybersecurity capabilities must evolve quickly to meet the rapidly evolving threats and vulnerabilities.

Programs within the ISSP budget include:

P5 / Public Key Infrastructure (PKI): PKI implements a secure infrastructure for the generation, management, and delivery of digital certificates for secure electronic transactions, hardware certificate-based two-way authentication to networks, applications, web servers, and secure email.

P5 / Navy Cyber Situational Awareness (NCSA): NCSA is a command and control infrastructure that provides Navy commanders with timely, trusted, and comprehensive Situational Awareness (SA) of the cyberspace domain to include tailored, near real-time visualization of network health, vulnerabilities, and operational readiness through the correlation of data from multiple sources. NCSA enables early threat detection and timely decision making. NCSA ashore systems will enable Navy commanders to monitor, assess, plan, and direct Navy networks to provide a high-level of confidence that operational missions can be executed as planned in adverse cyber conditions. Cyber SA will be provided via web-accessible services generated from a primary core suite fielded at Navy Cyber Defense Operations Command (NCDOC). Visualizations and analytics will be customized based on end user needs, shareable and tailorable between different end users. End users include Fleet Cyber Command/Commander Tenth Fleet (FCC/C10F), Fleet Maritime Operations Centers (MOCs), NCDOC, and Navy Network Warfare Command (NNWC). NCSA procures equipment to collect, curate, analyze, and visualize maritime operations critical for providing Navy commanders with timely, trusted, and comprehensive SA of the cyberspace domain; Data as a Service (DaaS) which provides the ability to ingest disparate data from numerous data sources; analytics suite of software and logic to integrate and translate the data ingested by the DaaS component; visualization/user interface to display cyber SA data that are relevant to the unique needs of the Cyber Commander and for display via common visual services; as well as equipment for platforms conducting Ballistic Missile Defense (BMD) and Nuclear Command, Control, and Communications, Navy (NC3-N) missions. The data that is collected and analyzed via SHARKCAGE will be presented and visualized via the NCSA capability. Joint Regional Security Stacks (JRSS)/Cyber Situational Awareness Analytics Cloud (CSAAC) will integrate NCSA with CSAAC which achieves an integrated cyberspace mission to support Joint, maritime cyber, and mission operations. Ensures seamless information exchange and sharing of analytics, providing shared cyber SA. CSAAC is one of the five key elements of Joint Information Environment (JIE), providing cyber SA tools, collecting and analyzing data from the JRSS and joint management system.

| <p>P3A / Computer Network Defense (CND): CND provides capabilities to secure the Cyber Domain. CND is a set of processes and protective measures that use computer networks to detect, monitor, protect, analyze and defend against network infiltrations resulting in service/network denial, degradation and disruptions. CND enables a government or military institute/organization to defend against network attacks perpetrated by malicious or adversarial computer systems or networks. The Fixed Submarine Broadcast System (FSBS) includes the Nuclear Command, Control, and Communications, Navy (NC3-N) requirement to defend networks supporting Emergency Action Messages (EAM) transmission.</p> <p>P3A / Navy Cryptography (Crypto): Navy Crypto modernizes legacy cryptographic equipment which includes families of Communications Security (COMSEC) and Transmission Security (TRANSEC) devices that are divided into crypto voice, crypto data, crypto products and associated ancillary devices. These devices provide modern cryptographic solutions to replace obsolete, legacy devices within the crypto categories in order to meet mandated National Security Agency (NSA) cease key dates for modernized encryption. Advanced Cryptographic Capabilities (ACC), will provide NSA mandated cryptographic security software modernization of various communications security devices by cease key dates (details held at a higher classification).</p> <p>P3A / Key Management (KM): KM is a collection of Tier 2 security equipment, Key Management Infrastructure (KMI), and Tier 3 equipment Simple Key Loader (SKL). KMI will be a single, automated, network-accessible, electronic-based Key Management (KM) and predominantly electronic cryptographic product delivery infrastructure. It will provide Net Centric, reliable, timely, and secure COMSEC material management and distribution. It will additionally provide the means for secure ordering, generation, production, distribution, management and auditing of cryptographic products. The National Security Agency (NSA) mandates a tech refresh for the KMI system every five years.</p> <p>P3A / SHARKCAGE: SHARKCAGE is a global, federated Defensive Cyberspace Operations (DCO) enclave consisting of shore sensor nodes, DCO analysis workbenches, and analytic nodes. Utilizing one-way passive taps in a protected, isolated, classified environment, SHARKCAGE consolidates cyber event data from multiple platforms and networks, providing Navy DCO forces with a shared environment and common platform for integrated workflow, collaboration, and analysis. SHARKCAGE efficiently detects, correlates, and analyzes nation and non-nation state attacks against maritime data and the Naval Networking Environment (NNE). The data that is collected and analyzed via SHARKCAGE will be presented and visualized via the NCSA capability.</p> |                                               |                                                                                     |

\*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

  

**Justification:**  
The FY 2019 funding request was reduced by (\$1.326) million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

| <p>The FY 2019 funding increase is driven by the requirement to field cybersecurity infrastructure to the fleet. The primary drivers for the increase are Navy Cryptography, Advanced Cryptographic Capabilities (ACC), and SHARKCAGE.</p> <p>Computer Network Defense (CND) Increment 2-Ashore increase in FY19 to fund Shore Based Enterprise Network Enhancements. The FY19 funding is for the planning, design, relocation, procurement and installation of mission related C4I/IT equipment to new Naval Computer and Telecommunications for MILCON 913 Area Master Station Atlantic (NCTAMS LANT) Facility.</p> <p>Navy Cryptography Afloat FY19 increase to procure 90 VINSON/Advanced Narrowband Digital Voice Terminal (ANDVT) Crypto Modernization (VACM) as required to meet mandated National Security Agency (NSA) cease key dates. It additionally procures the initial 24 Advanced Cryptographic Capability (ACC) to meet the NSA mandated cryptographic security software modernization of various communications security devices.</p> <p>CND will also procure equipment to secure Navy afloat and ashore network information systems. Procurements will include hardware and software such as host-based protection tools, Department of Defense (DoD) mandated cyber security tools, cyber security capabilities, servers, laptops, ancillary devices, and equipment for Nuclear Command, Control, and Communications, Navy (NC3-N) networks supporting Emergency Action Messages (EAM) transmission to afloat and ashore platforms.</p> <p>Navy Cryptography (Crypto) - Ashore: FY19 increase funds to procurement of 1,279 VINSON/Advanced Narrowband Digital Voice Terminal (ANDVT) Crypto Modernization (VACM) required to meet mandated National Security Agency (NSA) cease key dates; the initial 16 Advanced Cryptographic Capability (ACC) to meet the NSA mandated cryptographic security software modernization of various communications security devices.</p> <p>Navy Cryptography (Crypto) - Afloat (DA071): FY19 increase is for(139) In-Line Network Encryptors (INE) and (1) COMSEC Phase II.</p> <p>Key Management (KM) (DA005): (1,233) Simple Key Loaders (SKL) and (95) Key Management Infrastructure (KMI) Tech Refresh NSA mandated five-year refresh cycle.</p> <p>SHARKCAGE (DA070): Under the Department of the Navy's direction FY19 is required for an increase in the procurement of (18) SHARKCAGE Afloat Suites, (2) Analytic Ashore Suites, and (5) Sensor Ashore Suites, which are required to detect emerging threats in the tactical environment, provide the capability to analyze active cyber threats and take actions to contain/stop actual or potential cyber threat activities.</p> <p>Public Key Infrastructure (PKI) (DA018): (10) PKI systems to include: Real-Time Automated Personal Identification System (RAPIDS) hardware/software, Navy Certificate Validation Infrastructure (NCVI) Secret Internet Protocol Router Network (SIPRNet) &amp; Non-Classified Internet Protocol Router Network (NIPRNet) hardware/software, and Logon Token product end items.</p> |                                        |                                                                              |

| <p><b>Description:</b></p> <p>Computer Network Defense (CND): CND provides capabilities to secure the Cyber Domain. CND is a set of processes and protective measures that use computer networks to detect, monitor, protect, analyze and defend against network infiltrations resulting in service/network denial, degradation and disruptions. CND enables Navy networks to defend against cyber attacks perpetrated by malicious or adversarial computer systems or networks.</p> <p>The CND afloat capability will remain until all systems have transitioned to Consolidated Afloat Networks and Enterprise Services (CANES). CND afloat Operating System Environment (OSE) includes host-based protection tools, system vulnerability tools, cyber remediation tools, supporting hardware and software for Department of Defense (DoD) mandated tools, enhanced data correlation tools, switches, ancillary devices and other related security tools.</p> |                    |                |                |                     |                                                                                     |                      |                        |                |                |                                                                                                          |                    |                   |

**Footnotes:**

<sup>(3)</sup> Operating System Environment (OSE) Software (SW) - FY19 quantities decrease as Consolidated Afloat Networks and Enterprise Services (CANES) is implemented. The CND shipboard infrastructure will move ashore in order to protect Navy afloat and ashore networks from cyber threats. OSE SW is centrally managed and loads software onto hardware. Quantities reflect one system per ship platform.

Description:  
Computer Network Defense (CND) ashore sites represent multiple CND architectures/capabilities within each build that are specifically procured for each site based on the site mission and latest cyber threat. CND builds and variants are specifically designed to each site in accordance with CND's rapid Information Technology (IT) fielding construct.  
  
CND ashore sites include: IT 21st Century (IT-21) Networks Operation Centers (NOC) which provide regional protection to shore and afloat assets within their area of responsibility; Navy Cyber Defense Operations Command (NCDOC), the designated Navy CND service provider, whose mission is to coordinate, monitor, analyze, and oversee the defense of Navy computer networks and NOCs who are responsible for accomplishing CND missions; Theater Network Operations and Security Centers (TNOSC) and Outside the Continental United States (OCONUS) Navy Enterprise Network (ONE-Net) Local Network Service Centers (LNSC). The ONE-Net security initiative consolidates LNSCs to their parent TNOSCs for more efficient operation and enables greater failover capability between ONE-Net sites; Broadcast Control Authorities (BCA); Fixed Submarine Broadcast System (FSBS); P-913: Shore Based Enterprise Network Enhancements for the Naval Computer and Telecommunications Area Master Station Atlantic (NCTAMSLANT) Facility (MILCON P-913) which requires the CND capability; Naval Computer and Telecommunications Station (NCTS) San Diego which provides Unclassified but Sensitive Internet Protocol Router Network (NIPRNet) and Secret Internet Protocol Router Network (SIPRNet) computer networking and the associated DoD mandated Information Assurance (IA)/CND tools upgrades to multiple Navy shore and afloat commands on the West coast; Pre-Planned Product Improvement (P3I) NCDOC upgrade which replaces end-of-life equipment with more robust capability at NCDOC to enhance the command's Cyber Defense Mission Support System (CDMSS) architectural framework to provide the necessary storage capability and processing power to ingest and analyze increased volumes of data from additional sources; The Virtual Training Environment (VTE) initiative which will transition equipment to an approved solution at the schoolhouses. CND is designated Training Support Agent (TSA); and CND Production Labs that provide CND architecture for production representative systems. In addition, the Nuclear Command, Control, and Communications, Navy (NC3-N) network which supports Emergency Action Messages (EAM) transmission to ashore and afloat adds CND capabilities at NCDOC, BCA and FSBS in support of the national NC3 mission.  
  
CND also provides ashore infrastructure to provision the latest cyber security updates to all afloat tactical units; including Consolidated Afloat Networks and Enterprise Services (CANES), Integrated Shipboard Network System (ISNS) and other networks, which roll up cyber network data to NCDOC. CND will deploy technologies to shore commands and the shore-based afloat infrastructure to improve network defense and security wholeness, countering intruders and attacks aimed at disrupting tactical communications at the afloat gateways and shore commands; this will help the Navy's ability to prevent, constrain, and mitigate cyber-attacks and critical vulnerabilities, as well as provide greater resiliency, awareness, data analytics, redundancy, and diversity into the Navy's Defense-in-Depth (DiD) strategy. CND shore sites will have modern network sensors, improving the ability to detect unusual network patterns and prevent/deter malicious attacks.  
  
CND procurement/installation quantities represent multiple CND architectures with an assortment of builds that are specifically designed to each site. Costs may vary by site and variant.

| <p><b>Footnotes:</b></p> <p>(5) Networks Operation Centers (NOC) - Installation unit cost fluctuations vary by site type as well as the variant/capabilities being fielded to the site. CND quantities represent multiple CND architectures with an assortment of builds that are specifically designed to each site. Installation cost will vary based on equipment installed/removed as well as location. In accordance with CND's rapid IT fielding, CND procurement/installation costs will vary year to year due to the delivering capabilities determined by the CND capabilities Steering Group (CCSG).</p> <p>(6) Navy Cyber Defense Operations Command (NCDOD) - Installation unit cost fluctuations vary by site type as well as the variant/capabilities being fielded to the site. CND quantities represent multiple CND architectures with an assortment of builds that are specifically designed to each site. Installation cost will vary based on equipment installed/removed as well as location. In accordance with CND's rapid IT fielding, CND procurement/installation costs will vary year to year due to the delivering capabilities determined by the CCSG.</p> <p>(7) Theater Network Operations &amp; Security Center (TNOSC) - Installation unit cost fluctuations vary by site type as well as the variant/capabilities being fielded to the site. CND quantities represent multiple CND architectures with an assortment of builds that are specifically designed to each site. Installation cost will vary based on equipment installed/removed as well as location. In accordance with CND's rapid IT fielding, CND procurement/installation costs will vary year to year due to the delivering capabilities determined by the CCSG.</p> <p>(8) Broadcast Control Authorities (BCA) - Installation unit cost fluctuations vary by site type as well as the variant/capabilities being fielded to the site. CND quantities represent multiple CND architectures with an assortment of builds that are specifically designed to each site. Installation cost will vary based on equipment installed/removed as well as location. In accordance with CND's rapid IT fielding, CND procurement/installation costs will vary year to year due to the delivering capabilities determined by the CCSG.</p> <p>(9) Navy Enterprise Network (ONE-Net) - Local Network Service Centers (LNSC) - CND Inc 2 Shore installation unit cost fluctuations vary by site type as well as the variant/capabilities being fielded to the site. CND quantities represent multiple CND architectures with an assortment of builds that are specifically designed to each site. Installation cost will vary based on equipment installed/removed as well as location. In accordance with CND's rapid IT fielding, CND procurement/installation costs will vary year to year due to the delivering capabilities determined by the CCSG.</p> <p>(10) Fixed Submarine Broadcast System (FSBS) - Installation unit cost fluctuations vary by site type as well as the variant/capabilities being fielded to the site. CND quantities represent multiple CND architectures with an assortment of builds that are specifically designed to each site. Installation cost will vary based on equipment installed/removed as well as location. In accordance with CND's rapid IT fielding, CND procurement/installation costs will vary year to year due to the delivering capabilities determined by the CCSG.</p> <p>(11) P-913: Shore Based Enterprise Network Enhancements - FY19 funding is for the planning, design, relocation, procurement and installation of mission related C4I/IT equipment to new Naval Computer and Telecommunications Area Master Station Atlantic (NCTAMS LANT) Facility (MILCON P-913). FY19 unit cost reflects a more robust cybersecurity capability.</p> <p>(12) Naval Computer and Telecommunications Station (NCTS) - San Diego provides NIPRNet and SIPRNet computer networking and the associated DoD mandated IA/CND tools upgrades to multiple Navy shore and afloat commands.</p> <p>(13) Pre-Planned Product Improvement (P3I): NCDOD Upgrade - FY19 unit cost increase reflects a more robust cybersecurity capability required to upgrade end-of-life equipment to support the NCDOD mission.</p> <p>(14) Virtual Training Environment (VTE) - CND is required to transition equipment to an approved solution at the schoolhouses. Mandatory system upgrades required annually to address the latest cyber threat. No associated install costs.</p> <p>(15) CND Production Labs - No associated install costs.</p> <p>(16) Train-the-Trainer - CND is designated Training Support Agent (TSA) and is required to transition initial training (train the trainer) to an approved solution at the schoolhouses.</p> |                                                                                     |                                                                                                          |

**Description:**

The Navy Cryptography (Crypto) program is designated as Department of Navy's (DoN) Cryptographic Modernization Program Office (CMPO). CMPO procures, installs, and provides life-cycle support for National Security Agency (NSA) Type-1 end cryptographic units for United States Navy (USN) (to include Military Sealift Command (MSC) platforms), United States Marine Corps (USMC), and United States Coast Guard (USCG). Navy Crypto afloat equipment includes: Families of Communications Security (COMSEC) and Transmission Security (TRANSEC) devices that are divided into crypto voice, crypto data, crypto products and associated ancillary devices. These devices provide modern cryptographic solutions to replace obsolete, legacy devices within the crypto categories for all Services.

Crypto Data products include: Advanced Cryptographic Capabilities (ACC), which provide NSA mandated cryptographic security software modernization of various communications security devices by cease key dates (details held at a higher classification); In-Line Network Encryptors (INE); KIV-7M (COMSEC Serial Crypto Replacement); KW-46; Cryptographic Universal Enclosures (CUE), and KGV-11M TRANSEC.

Crypto Voice products include: VINSON/Advanced Narrowband Digital Voice Terminal (ANDVT) Cryptographic Modernization (VACM). VACM is the modern cryptographic product replacement for legacy secure voice products.

Space and Naval Warfare Systems Command (SPAWAR) is the VACM Central Procuring Agency for the USN to include the MSC, Naval Air Systems Command (NAVAIR), USMC and USCG.

**Description:**

The Navy Cryptography (Crypto) ashore equipment includes: Families of Communications Security (COMSEC) and Transmission Security (TRANSEC) devices that are divided into crypto voice, crypto data, crypto products and associated ancillary devices. These devices provide modern cryptographic solutions to replace obsolete, legacy devices within the crypto categories for all Services. Navy Crypto Ashore sites include: United States Navy (USN), United States Marine Corps (USMC), United States Coast Guard (USCG) facilities, Ballistic Missile Defense (BMD) facilities, production/integration sites, and training sites.

Crypto Data products include Advanced Cryptographic Capability (ACC), which provide National Security Agency (NSA) mandated cryptographic security software modernization of various communications security devices by cease key dates(details held at a higher classification).

Crypto Voice products include VINSON/Advanced Narrowband Digital Voice Terminal (ANDVT) Cryptographic Modernization (VACM).

Space and Naval Warfare Systems Command (SPAWAR) is the VACM Central Procuring Agency for the USN to include the Military Sealift Command (MSC), Naval Air Systems Command (NAVAIR), USMC and USCG.

| <p><b>Description:</b></p> <p>Key Management (KM) is a collection of Tier 2 security equipment, Key Management Infrastructure (KMI), and Tier 3 equipment Simple Key Loader (SKL).</p> <p>KMI is the next generation Tier 2 product to replace the legacy Local Management Device/Key Processor (LMD/KP) Electronic Key Management System (EKMS). KMI includes the Management Client (MGC), Advanced Key Processor (AKP) and High Assurance Internet Protocol Equipment (HAiPE) devices. KMI provides a net-centric, web based architecture for the ordering, management and distribution of all cryptographic key material to support Navy users.</p> <p>The AN/PYQ-10 SKL is a ruggedized, portable, hand-held fill device, for securely receiving, storing, and transferring data between compatible cryptographic and communications equipment. The SKL is backward-compatible with existing End Cryptographic Units (ECU) and forward-compatible with future security equipment and systems, including KMI.</p> <p>KMI Tech Refresh is a hardware and software upgrade to KMI Spiral 2 that is mandated by National Security Agency (NSA) to occur every five-years.</p> |                    |                |                |                                                                                     |                    |                      |                        |                |                |                                                                                 |                    |                   |

| <b>Footnotes:</b><br><sup>(27)</sup> Simple Key Loaders (SLK) - FY19 decrease is due to the attrition rate caused by the seven-year battery life span. SKL procurements are required to replenish the fleet with key-fill devices required to conduct secure, mission-critical communications. Quantities fluctuate to remain within the Inventory Objective Capability (IOC).<br><sup>(28)</sup> Key Management Infrastructure (KMI) Tech Refresh - FY19 increase is the result of National Security Agency (NSA) mandated five-year refresh cycle. KMI Tech Refresh modernizes all KMI Spiral 2 systems. Unit cost increase from Spiral 2 to KMI Tech Refresh are due to change in hardware.<br><sup>(29)</sup> Design Services Allocation (DSA) - FY19 increase aligns to the fielding of KMI Tech Refresh. |            |                |           |           |           |                |           |           |           |                                                                                     |           |           |           |                |                        |           |           |                |           |                                                                                 |           |                |                                 |           |           |                |           |           |           |           |            |

**Description:**

Key Management (KM) ashore sites include: United States Navy (USN), United States Marine Corps (USMC), United States Coast Guard (USCG) facilities, production integration sites, and training sites. KM ashore systems include: Simple Key Loader (SKL), Key Management Infrastructure (KMI) Spiral 1 & 2 and KMI Tech Refresh.

KMI is the next generation Tier 2 product to replace the legacy Local Management Device/Key Processor (LMD/KP) Electronic Key Management System (EKMS). KMI includes the Management Client (MGC), Advanced Key Processor (AKP) and High Assurance Internet Protocol Equipment (HAIZE) devices. KMI provides a net-centric, web based architecture for the ordering, management and distribution of all cryptographic key material to support Navy users.

The AN/PYQ-10 SKL is a ruggedized, portable, hand-held fill device, for securely receiving, storing, and transferring data between compatible cryptographic and communications equipment. The SKL is backward-compatible with existing End Cryptographic Units (ECU) and forward-compatible with future security equipment and systems, including KMI.

KMI Tech Refresh is a hardware and software upgrade to KMI Spiral 2 that is mandated by National Security Agency (NSA) to occur every five-years.

| <p><b>Footnotes:</b></p> <p><sup>(30)</sup> Simple Key Loaders (SLK) - FY19 decrease is due to the attrition rate caused by the seven-year battery life span. SKL procurements are required to replenish the fleet with key-fill devices required to conduct secure, mission-critical communications. Quantities fluctuate to remain within the Inventory Objective Capability (IOC).</p> <p><sup>(31)</sup> Key Management Infrastructure (KMI) Tech Refresh - FY19 increase of KMI Tech Refresh devices is the result of National Security Agency (NSA) mandated five-year refresh cycle. KMI Tech Refresh modernizes all KMI Spiral 2 systems. Unit cost increase from Spiral 2 to KMI Tech Refresh are due to change in hardware.</p> <p><sup>(32)</sup> Pre-Install Design Planning - FY19 increase reflects a one-for-one procurement to pre-install design planning cost associated with KMI Tech Refresh procurements/installations; Fluctuations in out years are attributed to not all installations requiring pre-install design planning due to multiple devices being installed at one site.</p> |            |                |           |           |           |                |           |           |           |                                                                                     |           |           |           |                |           |           |           |                        |           |                                                                                 |           |                                 |           |                            |           |                |           |           |           |           |            |       |

**Description:**

SHARKCAGE is a global, federated Defensive Cyberspace Operations (DCO) enclave consisting of sensor nodes, DCO analysis workbenches, and analytic nodes. Utilizing one-way passive taps in a protected, isolated, classified environment, SHARKCAGE consolidates cyber event data from multiple platforms and networks, providing Navy DCO forces with a shared environment and common platform for integrated workflow, collaboration, and analysis. SHARKCAGE efficiently detects, correlates, and analyzes nation and non-nation state attacks against maritime data and the Naval Networking Environment (NNE).

SHARKCAGE afloat suites includes laptops, servers, switches, storage, network taps/cables, and forensic equipment to enable deployed DCO forces to conduct localized mobile analysis. Afloat suites also include hardware and software for enhanced data correlation tools, ancillary devices, and other related security tools.

| Description:<br>SHARKCAGE ashore suites represent multiple SHARKCAGE architectures and variants that are specifically designed to each site in accordance with Fleet and Defensive Cyber Operations (DCO) requirements based on emergent threats in the tactical environment. Capabilities provided include network tapping, sensing, and analytic toolsets for passively monitoring multiple Navy networks to detect and assess cyber threats across multiple security enclaves. Ashore sites include Navy Cyber Defense Operations Command (NCDOC), Navy Information Operations Commands (NIOC), Fleet Cyber Command / Commander Tenth Fleet (FCC/C10F), Nuclear Command, Control, and Communications, Navy (NC3-N) sites, Ballistic Missile Defense (BMD) sites (i.e., Aegis Ashore), and SHARKCAGE production labs, as well as other network concentration facilities.<br><br>SHARKCAGE procures equipment to include: hardware, software, servers, data storage, taps, switches, laptops, and ancillary systems that provide the following capabilities: passive network sensor nodes that collect live network traffic and use signature-based and heuristic intrusion detection systems (IDS) to conduct initial analysis and alerting; analytic nodes which consist primarily of systems supporting ingest, storage, retention, retrieval, correlation, and real-time alerting of network traffic Packet Capture (PCAP) and event data; and analysis workbenches which provide an environment of tools for DCO analysts to support all aspects of the DCO mission, local to DCO forces at FCC/C10F, NCDOC, NIOC, Naval Computer and Telecommunications Stations (NCTS), and Naval Computer and Telecommunications Area Master Stations (NCTAMS).<br><br>SHARKCAGE NCDOC Suite is the primary ashore site that supports the entire Navy enterprise and provides the capability to analyze active cyber threats and take actions to contain/stop actual or potential threat activities. Tech refresh will occur every five years.<br><br>SHARKCAGE Analytic Suite provides a regional/area of responsibility capability to analyze active cyber threats and take actions to contain/stop actual or potential threat activities. Tech refresh will occur every five years.<br><br>SHARKCAGE Sensor Suite provide operators with the ability to conduct data ingest, data storage, data retention, data retrieval, data correlation, and real-time alerting of event-based data to support the DCO mission. Tech refresh will occur every five years. |             |         |         |                                                                              |             |               |                 |                     |                                                                |         |             |            |

| <br><b>Description:</b><br>[P40A / 343SA - Maritime Interdiction Operations Intel Exploitation Team]: Tactical Electronic Warfare Equipment: Procure Tactical Electronic Warfare (EW) equipment to be used in support of Indications and Warning and Force Protection. The capability includes an array of Tactical EW systems capable of both digital and analogue collection in the Radio Frequency (RF) environment. Specific collection capabilities include Digital and Analogue data collection; Specific Emitter ID, which discerns unique attributes of specific radar; Satellite Communication capability; Wireless Networks to conduct surveys, which is a telecom network mapping, and Document and Media Exploitation allowing capture of media from electronic devices. |                    |                |                |                                               |                    |                      |                                                                            |                                            |                |                            |                    |               |

## Justification:

The FY19 funding request supports the procurement of eight (8) devices which conduct surveys of telecommunications and network mapping. Devices use a supported computer platform plus Standard or Next Generation device/media connectors for document and media exploitation, allowing capture of media from electronic devices.

**Description:**

[P5 / 1V045 Access Systems & Subsystems]: Cryptologic Carry-On Equipment: The Cryptologic Carry-On Program (CCOP) procures state-of-the-art, commercial off-the-shelf signal acquisition equipment (hardware and software) in response to combatant commander requirements for a quick-reaction surface, subsurface, and airborne cryptologic carry-on capability. The equipment is procured according to the overall requirements detailed in the Shipboard Information Warfare / Cryptologic System Operational Requirements Document and specific execution year fleet requirements as defined by the Signals Of Interest (SOI) Integrated Product Team (IPT) and in concert with Shipboard Signals Exploitation Space (SSES) programs to ensure synergy and seamless transition to permanently installed SSES systems. The IPT meets several times a year and determines which SOIs/Targets on the SOI list need to be addressed. Due to a continually changing threat environment, detailed requirements are dynamic and equipment procured varies each year by quantity and type. Equipment suites can be configured for many targets and tasking. Target specific subsystems can either operate as stand-alone within cryptologic spaces or as an add-on to existing equipment. Hardware procurement includes: receivers, recorders, tactical computers and related peripherals, antennas, electronic-warfare support measures systems, precision geolocation equipment, advanced signal and search equipment including spectrum analyzers and associated portable special intelligence communications equipment. CCOP equipment is installed as an augment to cryptologic capabilities on subsurface, surface, and air platforms. There are approximately 124 cryptologic capable surface ships and shore sites in the current Navy inventory. Each of these are potential users of this carry-on equipment, as are subsurface and air platforms. The temporary installation of equipment is coordinated through fleet electronic support personnel. A primary system in inventory is the Carry On Radio Spectrum Analysis & Intelligence Reporting (CORSAIR) system. Funds continue to procure CORSAIR core architecture system upgrades to provide additional affordable functionality to the combatant commands. Additional signal acquisition equipment to address specific combatant command requirements include such systems as Digital Receiver Technology (DRT), Hostile forces Integrated Targeting Service (HITS), Maritime Toxic Pen (MTP), TURBULENTWAVE / TURBULENTWIND / TURBULENTSAIL, BLUESTREAM servers, RED FALCON / VULCAN, STINGRAY, MUDCAT, Toxic Fog, Radio Frequency Distribution Unit (RFDU), TEAPARTY/TEALEAF, and Generic Area Limitations Environment (GALE)-Lite. This line also supports the procurement of STALLION hardware for CCOP team training.

[P5 / Global Signal Analysis Laboratory (GSAL) NAVIFOR [60]]: GDX6D - GLOBAL SIGNAL ANALYSIS LABORATORY (GSAL): The Navy GSAL program, under project name CLASSIC SENSEI, provides for the timely analysis of data derived from maritime mobile Information Warfare (IW) operations. GSAL support is conducted by Signals Analysis Laboratories (SAL) co-located with Fleet Information Operations Centers (FIOC) at theater-level analysis and processing centers and by QuickLook / Nodes forward-based at fleet concentration areas. The GSAL program office equips the SAL's with advanced signals analysis capabilities in order to accomplish the high order analysis that is required to effectively address SAL processing and exploitation requirements in support of both maritime tactical and national strategic IW objectives. Additionally, SAL's are equipped with specialized capabilities to support FIOC maritime Signal Descriptor File (SDF) requirements. Funding is required to maintain and sustain SAL operations while allowing for upgrades required to integrate new technology to accommodate the highly technical analysis requirements attendant with a highly diverse and constantly changing electromagnetic environment. Additionally, Navy SAL's are integral components of the global collaborative enterprise architecture via the GSAL LABLINK data handling subsystem. LABLINK provides for advanced data manipulation, achieving, and forwarding / exchange while providing connectivity and global reachback in support of analysis with collaborating military, national, and international partners via signal screening and processing tools resident in LABLINK. GSAL theater-level laboratories are located at Navy Information Operations Command (NIOC) Hawaii (Pacific SAL), and NIOC Ft Gordon, Georgia (Atlantic SAL). Forward-based

| <b>Line Item MDAP/MAIS Code:</b> N/A<br><br>screening and forwarding QuickLook / Nodes are located at Souda Bay, Crete (potential relocation within the European theater), NIOC Bahrain, and a future installation at Kadena, Japan. Other GSAL facilities are located at NIOC Yokosuka, Japan, and at the Naval Information Warfare Activity (NIWA).<br><br>[P5 / GDX6D - System Integration and Installation of Hardware]: Fleet Information Operations Centers (FIOC): There are FIOCs co-located with National Security Agency (NSA) Cryptologic Centers supporting the geographical Satellite Communication Network (SATCOM). Each are charged with providing regionally focused Information Operation (IO) and Signal Intelligence (SIGINT) support to Fleet Commanders. FIOCs leverage NSA capabilities, analysis, and manpower in support of Fleet requirements. Funds are required for purchasing and maintaining life cycle support for command and control systems connected to SCI networks at the FIOCs. Funds are also provided to develop and maintain a common baseline of analytical intelligence software tools supporting FIOC capability areas as defined in the FIOC operational strategy (OPSTRAT).<br><br>[P5 / EW Fleet Synthetic Trainer Consolidation]: The Department's Fleet Synthetic Training (FST) (SIGINT / C-ISR) initiative addresses the lack of realistic SIGINT / C-ISR during exercises supporting the Fleet Training Continuum (FTC). Addresses critical requirements for SIGINT and C-ISR in Fleet Synthetic Training (FST) required in preparing Intelligence personnel/teams for forward deployed operations.<br><br>This effort provides the ability to exercise shipboard TS-SCI capabilities in an environment not subject to counter-detection. Improves staff operational planning and tactical decision making combined with improvements to overall Intelligence team readiness and certification throughout the Optimized-Fleet Response Plan (O-FRP). Supports Assured C2 and Cyber Situational Awareness/Cyber Defense and Enhanced Naval Network Environment (NNE) Information Dominance IPCLs. Builds upon GENSER NCTE (Navy Continuous Training Environment) to expand the existing GENSER NCTE with Above GENSER capabilities to include TS-SCI FST architecture/capabilities. Provides for architecture, capabilities and scenario build-out as well as required life-cycle management.<br><br>This capability will enhance individual units and Strike Groups in exercising integrated kinetic and non-kinetic capabilities, to include operations/intelligence fusion required for comprehensive maritime operations and operational proficiency in Electromagnetic Maneuver Warfare (EMW). FY 18 and out will fund Life Cycle Management (LCM) of the TS/SCI NCTE node on the East Coast and 14 Portable Embarkation Kits (PEKs). |                                               |                                                                                 |

| <p><b>Justification:</b></p> <p>FY19 funds will continue to satisfy signals exploitation capability gaps as determined by the Cryptologic Carry-on Program (CCOP) Signals of Interest (SOI) Integrated Product Team (IPT). At this time the recommendations for procurements that are best suited to address identified gaps may include: Digital Receiver Technology (DRT), Hostile forces Integrated Targeting Service (HITS), Maritime Toxic Pen (MTP), TURBULENTWAVE / TURBULENTWIND / TURBULENTSAIL, BLUESTREAM servers, RED FALCON / VULCAN, STINGRAY, MUDCAT, Toxic Fog, Radio Frequency Distribution Unit (RFDU), TEAPARTY/ TEALEAF, and Generic Area Limitations Environment (GALE)-Lite, BLACKBIRD AND QUICKSHOT as well as Adaptive Mission Packages. This line supports the procurement of STALLION hardware for CCOP team training.</p> <p>FY19 funds will provide for the timely analysis of data derived from maritime mobile Information Warfare (IW) operations. Global Signals Analysis Laboratory (GSAL) support is conducted by Signals Analysis Laboratories (SAL) co-located with Fleet Information Operations Centers (FIOC) at theater-level analysis and processing centers and by QuickLook/Nodes forward-based at fleet concentration areas. The Navy's Fleet Synthetic Training (FST) (SIGINT / C-ISR) initiative addresses the lack of realistic SIGINT / C-ISR during exercises supporting the Fleet Training Continuum (FTC). Addresses critical requirements for SIGINT and C-ISR in Fleet Synthetic Training (FST) required in preparing Intelligence personnel/teams for forward deployed operations. FST provides the ability to exercise shipboard TS-SCI capabilities in an environment not subject to counter-detection; improves staff operational planning and tactical decision making combined with improvements to overall Intelligence team readiness and certification throughout the Optimized-Fleet Response Plan (O-FRP). Supports Assured C2 and Cyber Situational Awareness/Cyber Defense and Enhanced Naval Network Environment (NNE) Information Dominance IPCLs; builds upon GENSER NCTE (Navy Continuous Training Environment) to expand the existing GENSER NCTE with Above GENSER capabilities to include TS-SCI FST architecture/capabilities; provides for architecture, capabilities and scenario build-out as well as required life-cycle sustainment and maintenance.</p> <p><b>OCO:</b></p> <p>FY19 Overseas Contingency Operations (OCO) funds will procure advanced Information Operations hardware in support of the ongoing Navy response to Joint Urgent Operational Need (CC-0558) for Counter Unmanned Aerial Systems (CUAS) efforts. More information is available at a higher classification.</p> |                                       |                    |                                               |                       |                                              |                                                                                 |                                              |                                              |                                              |                                              |

| <p><b>Footnotes:</b></p> <p>(1) Funding increase from FY18 to FY19 reflects the continuation of satisfying signals exploitation gaps and Signals of Interest (SOI). Quantity and unit cost of Cryptologic Carry-on Program (CCOP) systems and subsystems vary because procurements are in response to current Combatant Command fleet requirements as well as the Signals of Interest (SOI) and target threat list which is updated twice a year. CCOP system and subsystem unit costs range from \$.050M to \$.900M, with the exception of Maritime Toxic Pen (MTP) which is priced at \$2.150M per system. The unit cost listed above represents the average price per system.</p> |                                                                          |                                                                      |

(†) indicates the presence of a P-21

Footnotes:

(2) FY17 Vendors: BIT systems, TICOM, KAB, SRC

(3) Cryptologic Carry-on Program (CCOP) equipment is procured according to the overall requirements detailed in the Shipboard Information Warfare/Cryptologic System Operational Requirements Document and specific execution year fleet requirements as defined by the Signals Of Interest (SOI) Integrated Product Team (IPT). Due to a continually changing threat environment, detailed requirements are dynamic, contract award timelines and equipment procured varies each year by quantity and type.

"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

**Footnotes:**

<sup>(3)</sup> Cryptologic Carry-on Program (CCOP) equipment is procured according to the overall requirements detailed in the Shipboard Information Warfare/Cryptologic System Operational Requirements Document and specific execution year fleet requirements as defined by the Signals Of Interest (SOI) Integrated Product Team (IPT). Due to a continually changing threat environment, detailed requirements are dynamic, contract award timelines and equipment procured varies each year by quantity and type.

| Flyaway Unit Cost (\$ in Dollars)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | -           | -       | -                                      | -            | -           | -                                                             | -       | -                                   | -       | -       | -           | -          |
| Gross/Weapon System Unit Cost (\$ in Dollars)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | -           | -       | -                                      | -            | -           | -                                                             | -       | -                                   | -       | -       | -           | -          |
| Description:<br>The FY 2019 funding request was reduced by \$5.000 million to account for the availability of prior year execution balances.<br><br>The Coast Guard Equipment line funds the Coast Guard Combat System Suite for United States Coast Guard (USCG) cutters under the Coast Guard Surface Asset Acquisition Program. Under inter-service agreement (delineated in OPNAVINST 4000.79B), DON plans, programs, and budgets for specific Navy military equipment, systems and logistic support requirements for Coast Guard units to ensure the Coast Guard is prepared to execute naval warfare tasks in consonance with US Navy units. Ship construction and installation costs are funded under the Department of Homeland Security appropriation.<br><br>The Combat Systems and Weapons Suite will be aligned with future naval ship building programs to support commonality among the two Service's systems and meet National Fleet objectives.<br><br>The Combat System Suite must compliment and integrate with Navy Combat Systems. The suite is an appropriate balance of equipment to ensure the Coast Guard is prepared to accomplish the assigned Naval Warfare tasks in concert with US Navy units. The Surface Asset Acquisition Program Combat Suites include the following:<br><br>[P40A / CG001 - SPQ-9B RADAR]: Provides the AN/SPQ-9B radar for the Maritime Security Cutter, Large (WMSL) Class, aka the National Security Cutter, to track surface targets and low fliers in support of potential gun engagements.<br><br>[P40A / IFF AIMS]: Provides the AN/UPX-29A Identification Friend or Foe (IFF) System for the WMSL Class and the Offshore Patrol Cuter (OPC) Class, aka the Maritime Security Cutter, Medium (WMSM). The AN/APX-123 Transponder is procured for the Fast Response Cutter (FRC) aka Patrol Coastal Cutter (WPC).<br><br>[P40A / IFF AIMS TEST HARDWARE WMSM]: Hardware procurement for the IFF AIMS Land-Based Test Site for in support of the WMSM program (non-recurring cost).<br><br>[P40A / CG003 DECOYS MK 53]: Provides the MK 53 Mod 6 Decoy Launching System (DLS) for the WMSL and OPC Classes to provide soft-kill capability.<br><br>[P40A / CG004 SLQ-32]: Provides the AN/SLQ-32 Electronic Warfare System and the Battle Force Electronic Warfare Trainer (BEWT) for the WMSL Class to perform Electronic Support Measures to support soft-kill measures. |             |         |                                        |              |             |                                                               |         |                                     |         |         |             |            |

| <p>[P40A / CG005 MK 46/MK 20 OPTICAL SIGHT]: Provides the MK 46 Mod 1 Optical Sighting System (OSS) for WMSL 750-753. The MK 20 Mod 0 Electro-Optical Sighting System (EOSS) is procured for WMSL 754-757 and the OPC. These sighting systems are components of the MK48 Gun Weapon System (GWS) and provide fire control optical daytime and thermal imaging (infrared) sensor, and laser range finding to support engagements of hostile surface and air targets.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                        |                                                               |
| <p>[P40A / CG006 COMBAT SYSTEM INTEGRATION]: Ensures successful integration and system interoperability of Navy type equipment that affects the Combat System of USCG National Security Cutters (WMSLs), FRCs, OPC, and the '270 Medium Endurance Cutter (WMEC) modernization effort.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                        |                                                               |
| <p>[P40A / CG007 MULTI-MODE RADAR]: Provides the Multi-Mode Radar (MMR) to perform surface search, air search, and air traffic advisory control object detection and tracking functions for the OPC.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                        |                                                               |
| <p>FY2017-2018 MMR integration includes software upgrade to correlate radar contacts, radar video tracks and IFF information. Also includes the MMR hardware integration of the IFF antenna onto the MMR antenna (drawing updates and technical publications).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                        |                                                               |
| <p>[P40A / CG008 ATHENA CCD]: ATHENA Control, Correlation &amp; Display (CCD) System for the OPC. The ATHENA CCD uses existing AEGIS BSL 9, Common Source Library (CSL) code to control and display MMR and IFF data. The systems will also provide target queuing for Gun Weapon System engagement.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                        |                                                               |
| <p>FY2017-2018 ATHENA Combat System Control and Display integration supports software upgrade and hardware/software integration of the Technical Insertion (TI)-16 Common Display System for the MMR and IFF to provide data to the AN/SLQ-32(V)6 and the MK48 Gun Weapon System for target engagement on the OPC. Includes safety, certification, technical documentation, and information assurance efforts.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                        |                                                               |
| <p>[P40A / OPC C4I]: Funds are required for the procurement of Command, Control, Communications, Computers, and Intelligence (PEO C4I) for the new OPC Class, the Coast Guard's highest acquisition priority. Under inter-service agreement, the Navy budgets for specific Navy military equipment, systems and logistic support requirements for Coast Guard units to ensure the Coast Guard is prepared to execute naval warfare tasks in consonance with US Navy units. Ship construction and installation costs are funded under the Department of Homeland Security appropriation. Specific C4I systems to be procured include: AN/SRC-65 VHF/UHF Line of Sight Satellite Communication, ARC-210 Radios (Qty 11 per ship); OE-570A Antenna Qty (2); Navy Modular Automated Communications System (AN/SYQ-26) Qty (1);Fleet Broadcast Qty (8);CRYPTO Qty (1); OA-9277A Antenna Coupler Qty (3); and Command and Control Processor (C2P) AN/UYQ-120 Qty (2).</p> |                                        |                                                               |

| <p><b>Justification:</b><br/>           The FY 2019 funding request was reduced by \$5.000 million to account for the availability of prior year execution balances.</p> <p>The growth in the FY 2019 funding request is attributable to increases by the Department to procure Navy Type/Navy Owned (NT/NO) combat system elements for the Congressionally added WMSL 759 to the USCG's budget. Additional funding was added across the FYDP to support the '270 Medium Endurance Cutter (WMEC) Combat System Modernization effort which will replace all unsupportable systems across the USCG cutter class achieving expected service life beyond FY 2033.</p> <p>Funds procure NT/NO combat systems, support equipment, Integrated Logistics Support (ILS), certification, test and production support for USCG National Security Cutter (WMSL Class), Fast Response Cutter (WPC Class) and Offshore patrol Cutter (WMSM Class) being constructed under the Coast Guard's Surface Asset Acquisition Program. These efforts are ongoing. Funds provide AN/SPQ-9B ILS support for WMSL 758; procure IFF AN/APX-123(V) equipment, ILS and certification support for WPCs; procure IFF UPX-29A equipment, INCO spares, and ILS support for WMSM 3, WMSL 759 and WMSL 760; support IFF ILS and multi-year certifications for WMSLs 756-758; procure MK53 MOD 10 DLS for WMSM 3 and WMSL 759; provide BEWT for WMSL 758; procure the EOSS for WMSL 759; provide combat system integration for WMSLs 757-760, WPCs 1131-1140, and WMSMs 3 &amp; 4; procure the Multi-mode Radar for the WMSM 3; provide MMR hardware/software integration for the WMSM and 270' Modernization efforts; and provide WMSM combat system integration of the Technical Insertion (TI)-16 Common Display System and integration support for the ATHENA Control Correlation and Display (CCD) System.</p> <p>Funds procure navy specific equipment, C4I systems, and integrated logistic support for the USCG OPCs under an inter-service agreement. FY 2019 funds support AN/SRC-65 VHF/UHF Line of Sight Satellite Communication ARC-210 Radios; OE-570A Antenna; Navy Modular Automated Communications System (AN/SYQ-26); Fleet Broadcast; CRYPTO; A-9277A Antenna Coupler and Command and Control Processor (C2P) AN/UYQ-120.</p> |                                       |                    |                                               |                       |                                              |                                                                      |                                              |                                              |                                              |                                              |

**Footnotes:**

- (1) Provides the AN/SPQ-9B radar for the Maritime Security Cutter, Large (WMSL) Class, aka the National Security Cutter, to track surface targets and low fliers in support of potential gun engagements.
- (2) IFF Equipment suite for the WPC consists of MK XII equipment, Radar Control Transmitter (RCU), Radar Receiver-Transmitter shipping and installation fixtures which have various unit costs. The IFF AIMS Equipment unit price is an average unit cost for the various components being procured that year.
- (3) IFF Equipment suite for the OPC consists of the RT-1912C, C-12720, AS-177B, AN/APX-123 KIT, AN/UPX-41(C), AN/USM-719, KIV-78 and INCO spares with various unit costs.
- (4) IFF UPX-29A WMSM item name corrected to IFF UPX-46 WMSM
- (5) Non-recurring one time cost for procurement of hardware for the IFF AIMS land-based test site to support the WMSM program.
- (6) FY2019 increase is attributable to (a) additional IFF ILS Test Support for the congressionally added WMSL 759 in FY2019, (b) continuing IFF ILS Test Support for the congressionally added WMSL 758 in FY2018, and (c) the non-recurring cost (\$0.634 million) for a critical field change update for WMSL 750 to 755 (NSC 1 to 6) to avoid future costs and problems associated with hardware and software obsolescence.
- (7) FY2018 BEWT funds support engineering efforts associated with WMSL 757 system installation, inspection, and acceptance.
- (8) FY2019 Combat System Integration increase is attributable (1) to support Combat System Integration of the first delivery of the Multi-Mode Radar in FY2019 (December 2018), (2) to support Combat System Integration of the ATHENA Control, Correlation & Display (CCD) System on OPCs in FY2019, and (3) for the Installation and Information Assurance (IA) Certification of the FY2019 Hardware Procurement for the IFF AIMS Land-Based Test Site in support of the WMSM Program.
- (9) The Multi-Mode Radar (MMR) integration efforts include the software upgrade to correlate radar video tracks and IFF information and the detail design of the IFF antenna onto the MMR antenna hardware integration to include drawing updates and technical publications.
- (10) FY19 MMR ILS/TEST SUPPORT increase is attributable to the installation costs of the Multi-Mode Radar (MMR) in FY19. Each MMR delivery has an associated installation cost separate from the baseline ILS/TEST SUPPORT that supports the MMR Program, with FY19 the first year of MMR delivery.
- (11) The Combat System Control and Display OPC integration supports hardware and software integration of the Technical Insertion (TI)-16 Common Display System for the Multi-Mode Radar, IFF and to provide data to the MK48 Gun Weapon System for target engagement. Includes safety, certification, technical documentation, and information assurance efforts.
- (12) No associated equipment installation costs across the FYDP USCG will install the C4I systems. Procurements provide assets for OPC Hulls #1 through Hull #9 across the FYDP.
- (13) FY18 C2P unit cost changed as a result of an erroneous ship count. The C2P unit is being procured for only one ship in FY18, and this C2P variant is upgraded to a Tech Refresh Unit with LINK-22 capability.
- (14) FY 2019 Fleet Broadcast (SSR-1) increase in unit cost and quantities from FY18 to FY19 is attributed to additional integration costs of 4 separate components spread over 8 separate hardware units. Total quantity of 9 systems meets the inventory objective for Hulls 1-9.
