A. Mission Description and Budget Item Justification

Digital Warfare (DW) supports systems of systems digital engineering and requirements allocation, development of data technical baselines, digital architectures and data models, and provides for experimentation and data science for enterprise and warfare pilots in support of a composeable, modular Navy. DW provides the digital environment that supports the cross-functional/organizational teams performing the modeling and data science work.

Change Summary Explanation

FY18 increase due to funding transfer into this PE from SPAWAR PE 0604231N_3425, NAVSEA PE0603582N_3425 and NAVAIR PE 0605217N_3425.

FY19 decrease is due to Congressional reduction of \$6.7 million in project 3425 Digital Warfare due to unjustified request.

FY20 increased due to increase for Artificial Intelligence (AI) development effort and Combat Identification & Targeting (CID&T) Standard and Model Development, Implementation sustainment efforts.

Note

This project is a continuation of a FY2019 Defense-Wide funding effort (Project Harbinger) that was a pathfinder for Navy Artificial Intelligence (AI) Developmental / Operations (DevOps). This PE shifts funding of an existing FY2019 effort to Navy (RDT&E) in FY2020. This project is a new start for the Navy in FY2020.

A. Mission Description and Budget Item Justification

B. Accomplishments/Planned Programs (\$ in Millions, Article Quantities in Each)

Digital Warfare (DW) requires a comprehensive AI training and DevOps environment for advanced software tools to be deployed in support of highly volatile and rapidly changing warfare and threat environments. Such DevOps efforts are critical in the move to engage the warfighter directly in the development of advanced capabilities in establishing the framework and processes necessary to rapidly discover, develop, mature, certify, field, and train AI and human-machine teams. This overall effort supports our National Defense Strategy 2018 for building a more lethal force by investing in Advanced Autonomous Systems to gain the associated competitive military advantages of this modern capability.

Articles:	-	-	-	-	-
FY 2019 Plans:					
Funded in FY2019 from Defense Wide PE 0305245D8Z PRJ 245 for \$5.2M total					
FY 2020 Base Plans:					
-\$8M to maintain the Project Harbinger effort started under the Algorithmic Warfare Cross-Functional Team					
(AWCFT). The \$8M includes acoustic data acquisition and transfer (\$0.4M), data labeling efforts (\$1.5M),					
data engineering lab (\$1M), algorithm development and computing infrastructure (\$3.6M), algorithm integration					
(\$1.2M), and fielding to fleet (\$0.3M). Increase above the \$5.2M in AWCFT FY19 funding is for algorithm development and integration. DWO works directly with Undersea Warfighting Development Center (Groton) and					
COMSUBFOR (Norfolk) for Harbinger and has already tested it on a VACL SSN. This is in direct support of our					
National Defense Strategy to build a more lethal force using Advanced Autonomous Systems and the CNO's					
Design 2.0 LOE Green Paragraph 5.					
-\$2M for data architecture team (funds people) to develop a robust and sustainable data strategy for Naval					
operations to include all sensor data (acoustic, ISR, EW, etc). This expertise does not currently exist in the DoN.					
-\$15M for a DWO project to apply Al/DevOps to the operational level of war. It will develop planning and execution decision aids in support of U.S. Pacific Fleet and the Navy's Distributed Maritime Operations (DMO)					
execution decision and in support of 0.3. Facility Fleet and the Navy's Distributed Maritime Operations (DMO)				,	i

Note

This project is a new start in FY2020

A. Mission Description and Budget Item Justification

DW requires extensive information exchanges and message compatibility in order to fully exploit kinetic weapons / target pairing tools. These tools and the related weapons require a robust and extensive set of data to properly engage a target. The Warfighting Pilot effort begins the process of creating message and data standards that will drive Navy to a uniform set of message standards and data. In order to fully leverage and improve the information exchange and weapon employment opportunities, regardless of data link or message type used, a standardized data and message standard is required to maximize todays sensors for over-the-horizon combat identification & targeting.

DWO funds support the various teams and efforts necessary to establish the Track Data Standard. The result will be a fully defined and documented message standard that will be capable of implementation across multiple data link systems. The funds will also support the development of operational and physics based models for various kinetic long range weapon systems.

Note

Digital Warfare (DW) was previously funded in SPAWAR PE 0604231N (Tactical Command System), NAVSEA PE 0603582N (Combat System Integration), and NAVAIR 0605217N (Common Avionics) under DW Proj 3425 for FY18 and prior. FY20 and out funding was transferred from SPAWAR and NAVAIR and consolidated under NAVSEA. Mission functions and tasking remain unchanged due to this transfer. FY19 funding to be transferred under NAVSEA once enactment of the FY19 funding occurs.

A. Mission Description and Budget Item Justification

The DW technical initiatives directly support the Chief of Naval Operations (CNO) vision of inherent interoperability across the Navy enabling faster deployment of capabilities to the warfighter.

Naval Air Systems Command (NAVAIR), Naval Sea Systems Command (NAVSEA), Space and Naval Warfare Command (SPAWAR), Program Executive Offices (PEOs), warfare and system centers, University Affiliated Research Centers (UARCs)/Federally Funded Research and Development Centers (FFRDCs), and industry partners will support the Digital Warfare Office (DWO) under the Office of the Chief of Naval Operations (OPNAV) N2N6.

In order to develop capability from the top down, the DWO will develop requirements for System of Systems (SoS) to include all of the associated interoperability requirements. Due to the complexity of this work, the DWO will evolve the traditional requirements development methodology to a MBSE methodology that will encompasses associated model extensions, reports, views, configuration management, model development support, and documentation. This work will be completed by a series of teams, each focused on a separate threat domain, and made up of system modelers, fleet representatives, Program of Record (PoR) representatives, architecture, and interoperability experts. The products generated by these teams will include data technical baselines for domain areas with individual profiles for each program of record, coordinated requirements recommendations, and potential areas for Science and Technology (S&T) and experimentation to fill gaps. The DWO will include emerging digital technologies including human/machine teaming, data science, and artificial intelligence.

DWO funding supports development of requirements modeling and data science experimentation environment at multiple security level. This environment will host the authoritative source of truth for Naval Echelon I requirements development. The DWO will support experimentation to provide necessary fidelity in the requirements allocation process, focusing on areas that may provide solutions across multiple domains.
