Dear Ms. Delane,

I protest the government plan to drop chaff and flares from planes stationed at Cannon AFB, Clovis, NM.

When private citizens drive up and down roads throwing out beer cans and cigarette butts, they are irresponsible. Just because the government proposes to dump chaff and flares from planes, it doesn't make them any less irresponsible.

These private citizens never think they will cause a fire with their cigarette butts, but sometimes they do. The flares might also cause fires, even though you think they won't. If even one in a thousand does, it is still one too many.

The beer cans are not environmental hazards but either some one must pick them up or they continue to be an eyesore. Your chaff is litter, too. At least a private citizen might be unaware the problem they are causing. The government ought to know better. Who is going to pick up the chaff now? I don't think it will be your pilots.

Sincerely,

Karen Steele

Attn: Ms Linda Devine

Subject: Defensive Training Initiative of Cannon AFB on New Mexico Rangeland

Dear Ms Devine:

It has recently come to my attention that the United States Air Force is planning to start Defensive Training Initiative (DTI) of Cannon AFB on New Mexico rangeland. This DTI program would allow your F16's to drop flares on fragile New Mexico rangeland. Though you assure ranchers that the flares will be out cold before they hit our rangeland, an even remote chance of a range fire caused by one of your flares is every rancher's nightmare. I am requesting that an Environmental Impact Study should be done before you start your DTI.

In addition:

- Semi-arid range land of the Peñas MOA is a very fragile environment; it is slow to degrade most human trash. Both chaff and flare residue are not biodegradable.

- The flares contain hazardous waste in chromium and vanadium content. By AF admission, prolonged inhalation of chaff fibers causes respiratory inflammatory response. My livestock will smell it and die.

- The fires that the flares can potentially start will not be tolerated. All fire departments in New Mexico (professional and volunteer) should be trained in all aspects of handling all situations in all scenarios associated with the deployment of flares from your F16's over fragile New Mexico rangeland.

- In the US there are currently 14 designated MOA's for chaff and 8 for flares. DTI should continue to be conducted at these designated sites as it has been since the F16 arrived at Cannon AFB six years ago.

Please do not put this program into place. Use the existing sites for your testing. Our livelihood depends on our rangeland. We, New Mexico environmentalists, care for our rangeland as we care for our children. Please do not drop flares on New Mexico rangeland.

Sincerely,

Bill & Peggy Haverlah

Attn: Ms Linda DeVine

Subject: Defensive Training Initiative of Cannon AFB on New Mexico Rangeland

Dear Ms DeVine:

It has recently come to my attention that the United States Air Force is planning to start
Defensive Training Initiative (DTI) of Cannon AFB on New Mexico rangeland. This DTI
program would allow your F16’s to drop flares on fragile New Mexico rangeland.
Though you assure ranchers that the flares will be out cold before they hit our
rangeland, an even remote chance of a range fire caused by one of your flares is
every rancher’s nightmare. I am requesting that An Environmental Impact Study should
be done before you start your DTI.

In addition:
• Semi-arid range land of the Pecos MOA is a very fragile environment; it is slow to
degradate most human trash. Both chaff and flare residue are not biodegradable.
• The flares contain hazardous waste in chromium and vanadium content. By AF
admission, prolonged inhalation of chaff fibers causes respiratory inflammatory
response. My livestock will smell it and die.
• The fires that the flares can potentially start will not be tolerated. All fire
departments in New Mexico (professional and volunteer) should be trained in all
aspects of handling all situations in all scenarios associated with the deployment of
flares from your F16’s over fragile New Mexico range land.
• In the US there are currently 14 designated MOA’s for chaff and 8 for flares. DTI
should continue to be conducted at these designated sites as it has been since the
F16 arrived at Cannon AFB six years ago.

Please do not put this program into place. Use the existing sites for your testing. Our
livelihood depends on our rangeland. We, New Mexico environmentalists, care for our
rangeland as we care for our children. Please do not drop flares on New Mexico
rangeland.

Sincerely,

Magdalena Monserrat
I was very disappointed but not surprised when I was denied the right to ask all my questions within a reasonable time frame especially since non-chaff and flare questions and comments took precedence at the hearing on Thursday, April 5, in Fort Sumner, and I was not really surprised when there were low-level flyovers by jets above the tree planting ceremony at Fort Sumner State Monument at 12:15 pm the next day. My disillusionment with the military began during the 1960s when Johnson McNamara, Hauge and others withheld information or lied about various aspects of the Vietnam War as exposed by the press and soldiers in Vietnam, as well as others, the same cover-ups, misleading statements have continued since then. Thus I do not believe everything that was said at the recent hearing so I cannot accept any of the oral or printed words which were.

Attn: Ms. Linda DeVine
EMANATED LAST THURSDAY EVENING. MY QUESTIONS NOT ASKED HAVE NO SIGNIFICANCE. THE OPPORTUNITY TO WRITE CRITICAL LETTERS TO THE PRESS, POLITICAL FIGURES AND TO REVIEW THE DRAFT EA, HOLDS SOME PROMISE, HOWEVER.

Dan Sarnacki
HISTORIAN

P.S. The scene becomes (here) which I heard at Fort Seward last Friday, between 5:25 p.m. and 5:35 p.m., were retaliation for those of us who question, who protest? Are these the Chinese pilots in military jets? (That was, resting at 10:16 am, 4-17-01.)

copies: Senator Jeff Bingaman, Representative Tom Udall, Secretary Jennifer Salsberg.

* One of the pilots stated that the chief were bio-degradable. I challenged - and another team member said they were not. "Fact Sheet" states "chief" impacts on agricultural operations "are negligible and far less than those from other man-made emissions." (p.4).
1. I have personally invested over 10 million dollars in land and cattle in the MOA of Cannon AFB in the last three years. Would I have spent this much knowing the AF might be dumping ‘Protective Chaff’ (i.e. trash) and ‘Flares’ (i.e. incendiary devices) on this land? The answer is NO! This proposed dumping amounts to a taking of value from me without just compensation, and that should be illegal in anyone’s book.

2. If a commercial trunk carrier airline were to make a statement that they could improve fuel and overall operating efficiency (profitability) of their airline by ejecting compacted food waste and other trash at 20,000 to 30,000 feet, and they would ignite it so that it would burn and fall harmlessly to the ground, they would be laughed into oblivion with such a scurrilous statement. The proposed Defensive Training Initiative (DTI) of Cannon AFB is for efficiency purposes only (to save money and to make their job easier). In the U.S. alone there are currently 14 designated MOA’s for chaff and 8 for flares. DTI should continue to be conducted at these designated sites as it has been since the F16 arrived at Cannon AFB 6 years ago.

3. The semi-arid range land of the Pecos MOA is a very fragile environment, and is very slow to degrade most human trash. For example, a tin can will take several generations to blend into the background or disintegrate as compared to 10 years or less in more humid areas of the country. Part of the appeal of the rangeland is its pristine cleanliness. If I were to have an employee throwing cola cans or snuff tins out of his vehicle, I would warn him a couple of times, then fire him. If I were to have an employee who starts a fire carelessly with a match or discarded cigarette, I could probably fire him on the spot. What can I do with the USAF? Both chaff and flare residue are not biodegradable.

4. Hazardous contamination. The chromium in the flares is a terrible health hazard by AF admission. Vanadium isn’t good. By AF admission, prolonged inhalation of chaff fibers causes respiratory inflammatory response. Normal cow response to something different on the ground is to smell it. (95% of snakebites to cows are on the nose from trying to sniff the snake.) Most of the serious threats to bovine health come through their lungs.

5. The AF assures me that it has calculated that the flares will be out cold before they hit my ranch. While I haven’t asked, I’m certain that they would calculate that the probability of an F16 crashing and burning on my ranch is much smaller than the probability of a flare causing a fire. Cannon AFB has crashed two F16 jet fighters on the ranch (at different times) in the last 2 1/2 years. I have a monstrous credibility problem with the AF not causing more fires!

6. I have had 3 man-caused fires (not by AF) on my ranch in the last 14 months, burning about 3800 acres. An additional 50,000+/ acres of man-caused fires occurred locally in DeBaca Co., NM last year. We really can’t stand any additional probabilities. There are large expanses of true desert with 5-7 inches of yearly rainfall in southern NM that don’t carry enough vegetative cover to support a fire. The DTI should be moved to one of these areas 100-200 miles south. (That is only 20 F16-minutes away!)

7. Wild rivers, Native Americans, wilderness areas, coastal management zones, wetlands, national parks and national monuments all get special environmental assessment treatment. What about me!

Richard H. Evans
Double V Ranch
HC 64, Box 12

Linda DeVine, EIAP Project Manager
HQ ACC/CEVP
129 Andrews Street, Suite 102
Langley AFB, VA 23665-2769

Dear Ms. DeVine:

This letter responds to your March 16, 2001, letter requesting information on threatened or endangered species or important wildlife habitats that could be affected on sites proposed for defensive training exercises in and around Cannon Air Force Base in portions of Curry, Roosevelt, Chaves, Lincoln, Torrance, San Miguel, Guadalupe, De Baca and Quay counties of New Mexico.

We have enclosed a current list of federally-endangered, threatened, candidate species, and species of concern that may be found in the larger preferred alternative project area. Additional information about these species is available on the internet at, <http://nmnhp.unm.edu/bisonm/bisonm.cfm>, <http://nmrareplants.unm.edu>, and <http://fw2es.fws.gov/endangeredspecies>. Under the Endangered Species Act, as amended (Act), it is the responsibility of the Federal action agency or its designated representative to determine if a proposed action "may affect" any threatened, endangered, or proposed species, or critical habitat, and if necessary, to consult with us further. If your action area has suitable habitat for any of these species, we recommend that species-specific surveys be done during the appropriate flowering or breeding season to evaluate any possible project-related impacts.

Candidates and species of concern have no legal protection under the Act and are included in this document for planning purposes only. We are required to monitor the status of these species. If significant declines are detected, these species could potentially be listed as endangered or threatened. Therefore, actions that may contribute to their decline should be avoided. We recommend that candidates and species of concern be included in your surveys.
Under Executive Order 11990, Federal agencies are required to minimize the destruction, loss, or degradation of wetlands, and preserve and enhance their natural and beneficial values. We recommend you contact the U.S. Army Corps of Engineers for permitting requirements under Section 404 of the Clean Water Act if your proposed action could impact wetlands. These habitats should be conserved through avoidance or mitigation should occur to ensure no net loss of wetlands functions and values.

The Migratory Bird Treaty Act (MBTA) prohibits the taking of migratory birds, nests, and eggs, except as permitted. To minimize the likelihood of adverse impacts to all birds protected under the MBTA, we recommend construction activities occur outside the general migratory bird nesting season of March through August, or that areas proposed for construction during the nesting season be surveyed, and if necessary, avoided until nesting is complete.

Please keep in mind that the scope of federally-listed species compliance also includes any interrelated or interdependent project activities (e.g., equipment staging areas, offsite borrow material areas, or utility relocations) and any indirect and cumulative effects.

We have three broad concerns with chaff and flare use based on recent documents such as the Air Force 1997 report on environmental effects of chaff and flares, the General Accounting Office 1998 report on management issues related to chaff and the 1999 Navy select panel report on environmental effects of chaff. First, if there will be significant increases in the amounts of chaff used in training as compared to use in the recent past and/or the use of degradable chaff then the Environmental Assessment (EA) should analyze these effects. These were identified in the Navy report as issues requiring further consideration of environmental impact. The EA should detail the amount of chaff being proposed for use under the three alternatives and how the use compares with Melrose Range and other areas using chaff in training exercises in the West, e.g., Fallon Naval Air Station and Nellis Air Force Range Complex. The extent of break-up and abrasion of chaff and the resulting shapes, resuspension and fate of chaff particles should also be analyzed. The Navy report recommended further research on these topics and we are interested in any results of such research.

Second, we see a need to analyze potential impacts to highly sensitive, confined aquatic habitats that support threatened and endangered species or migratory birds in areas underlying airspace proposed for chaff use. This issue was identified in the 1997 Air Force report. Lastly, the potential risk of wildfire from flare-induced ignitions, along with possible impacts to existing vegetation, plant species composition, and current wildlife habitat should be assessed in the EA. We are interested in the effects analysis of contingency plans should wildlife occur during a proposed training exercise.
If you have any questions regarding this information, please contact Maureen Murphy at the letterhead address or at (505) 346-2525, ext. 115.

Sincerely,

Index

E       =  Endangered (in danger of extinction throughout all or a significant portion of its range).
PE      =  Proposed Endangered
PE w/CH =  Proposed Endangered with critical habitat
T       =  Threatened (likely to become endangered within the foreseeable future throughout all or a significant portion of its range).
PT      =  Proposed Threatened
PT w/CH =  Proposed Threatened with critical habitat
PCH     =  Proposed critical habitat
C       =  Candidate Species (taxa for which the Service has sufficient information to propose that they be added to list of endangered and threatened species, but the listing action has been precluded by other higher priority listing activities).
SC      =  Species of Concern (Taxa for which further biological research and field study are needed to resolve their conservation status or are considered sensitive, rare, or declining on lists maintained by Natural Heritage Programs, State wildlife agencies, other Federal agencies, or professional/academic scientific societies). Species of Concern are included for planning purposes only.
S/A     =  Similarity of Appearance
*       =  Introduced population
†       =  May occur in this county from re-introductions in Colorado.
XN      =  Nonessential experimental
**      =  Survey should be conducted if project involves impacts to prairie dog towns or complexes of 200-acres or more for the Gunnison's prairie dog (*Cynomys gunnisoni*) and/or 80-acres or
more for any subspecies of Black-tailed prairie dog (*Cynomys ludovicianus*). A complex consists of two or more neighboring prairie dog towns within 4.3 miles (7 kilometers) of each other.

*** = Extirpated in this county
I attended the CAFB EA Public Scoping Meeting in Santa Rosa, NM, on 04 Apr 01. I, A.S. Elliott, submit the following comments and concerns:

1) WE, "IN THE SPARSELY POPULATED, PRIMARILY AGRICULTURAL PRODUCING AREA..." DO NOT NEED ANY MORE POTENTIAL FIRE DANGER FROM ACCIDENTAL OR FAULTY DEFENSIVE FLARES. I HELPED FIGHT A RANGE FIRE ON 17 FEB 00 THAT CONSUMED OVER 45,000 ACRES IN 5 HOURS.

2) WE, "...IN THE 'SAME' SPARSELY POPULATED... AREA..." DO NOT NEED ANY MORE MILITARY TRASH DEPOSITED UPON OUR PROPERTY IN TIME OF PEACE. I.E., THE CAPS FROM FLARES AND CND STUN CONTAINERS, AND THE C-17 AIRCRAFT ITSELF. THIS IS KNOWN AS LITTERING AND IS NOT ACCEPTABLE. WE'RE STILL FINDING SMALL IRON FROM WWII ON S. TEXAS RANGE, AND Z-2 F-4 DROP TANKS.

I've experienced 20+ YEARS OF AGREEMENTS BROKEN AGREEMENTS, NSAs, EXPIRED NSAs, AND CONTINUOUS "ACCIDENTS", INDIFFERENCES, AND FAILURE TO IMPLEMENT EXPANDED NSA, DAMAGES, INCONVENIENCES, ET ALL THE WHILE NOTIFYING USAF, ANG, AND OTHERS.

YES, ACCIDENTS WILL HAPPEN, BUT, CAN BE AVOIDED.

TO PERFORM THESE DEFENSIVE AERIAL FUNCTIONS OVER PRIVATE LAND, SUCH AS OURS, IS NOT ACCEPTABLE.

Therefore, we are in opposition to this new procedure.

Please be advised that by including your name and address, you are agreeing to it being part of the EA public record.

NAME: A.S. Elliott for Cottomitee, LTD., LANDOWNER

CITY: UVALDE, TX 78801 - 9700
STATE, ZIP CODE: TX 78801 - 9700

☐ Please check if you would like to receive a copy of the Draft EA
The Mescalero Apache Tribe has determined that the proposed action involving the use of chaff (aluminum-coated silica fibers) and flares WILL NOT AFFECT any objects, sites, or locations important to our traditional culture or religion.

The Mescalero Apache Tribe has determined that the proposed project will affect objects, sites, or locations important to our traditional culture or religion. We request that the project undertake further consultations to evaluate the effects of the project on these sites.

Thank you for providing the Mescalero Apache Tribe the opportunity to comment on this project. We look forward to reviewing and commenting on future Department of the Air Force projects.

COMMENTS:
Ms Linda DeVine, EIAP Project Manager  
Department of the Air Force, Headquarters Air Combat Command  

HQ ACC/CEVP  
129 Andrews Street, Suite 102  
Langley AFB VA 23665-2769  

2 May 2001  

RE: Defense Training Initiative (DTI) for Cannon Air Force Base (AFB), New Mexico  

Dear Ms. DeVine:  

I am writing in response to a description of the draft Environmental Assessment for the DTI, received in this office on 19 March 2001. The letter from Alton Chavis of the Environmental Analysis Branch identified you as the point of contact for comments.  

Chavis’ letter requested information about cultural resources that may be present in the area of potential effect (APE) for the undertaking, and identified an area of approximately 10,125 square miles that encompasses acreage in Torrance, Guadalupe, Quay, Curry, Chaves, and Lincoln counties, New Mexico. Undoubtedly, historic properties—which, in the language of the National Historic Preservation Act could consist of archaeological sites as well as historic structures—that may be eligible to, or listed on, the National Register of Historic Places are located in such a large APE. Conducting the research necessary to determine where inventory survey for historic properties has been completed, or may need to be performed for this undertaking, is beyond the scope of the services that can be provided by this office.  

I recommend that you engage the services of a professional archaeologist in order to organize the cultural resources information and assist you in determining whether additional inventory may be needed. A list of permitted archaeologists and archaeological firms that perform work in New Mexico is available from this office upon request or can be downloaded from our web site http://museums.state.nm.us/hpd/; a copy is enclosed. Federal agencies with which you are working in New Mexico, including Cannon AFB, could also provide assistance in securing the services of a qualified professional. The results of this research could be presented to this office in the form of a report, or folded into the EA document as a chapter or an appendix. Whatever form the results are presented in, the historic properties data must be presented to this office for review and consultation regarding any historic located in the APE and any effects of the
proposed project upon them. The results, whether in the form of an EA or a separate report, should be accompanied by a cover letter from your office requesting a formal determination of effect for the undertaking.

The letter from Chavis described tribal consultation activities that are already underway. I suggest that you include documentation of your tribal consultation, and the results, as an appendix in the EA document or cultural resources report that you submit to this office when you are ready to request a determination of effect for the undertaking.

Along with a copy of the state permittee list, I am enclosing a copy of an information sheet that describes in more detail the kinds of data needed by this office for review as per Section 106 of the NHPA. Much of this information you have undoubtedly already planned to incorporate into the EA, but in order to expedite review by this office when you initiate the formal consultation for determination of effect, it would be most helpful if the cultural resources component were to be complete and presented in a format similar to the standards normally used for cultural resources reporting.

If you have any questions regarding these comments, please call me at (505) 827-6315.

Sincerely,

[Signature]

Elizabeth A. Oster
Staff Archaeologist
Log: 61815
Standard Information Needed for Section 106 Consultation

- Detailed description of the proposed project, including related activities to be carried out in conjunction with the project and the land status of real property in the area of effect. This description should explain the scope of work. Preliminary drawings or plans of the project design on USGS and/or other appropriate map should be included.

- Descriptions of the size of the project area, terrain, and present land uses of the project and adjacent land. Current photographs (originals) of the land to be used for the proposed project are helpful. Any additional information on kind and degree of prior or existing surface disturbance should also be included.

- A portion of the U.S. Geological Survey 7.5 quadrangle map with the project area clearly marked on it. The name of the quadrangle, and the Township, Range, and Section of the project area must be included with the map (or displayed on it). A legible photocopy of the portion of the quad in which the project area appears is fine, as long as the name of the quad and the other locational information are provided with the map.

- A written description of the proposed boundaries of the project’s Area of Potential Effects (APE). This should also be marked on the map, if the APE does not coincide with the project area (if, for example, effects extend beyond the area of ground disturbance).

- A detailed description of efforts that are being made or on-going in order to identify and evaluate properties (including historic structures and archaeological sites) in the APE that are listed on or eligible to the National Register of Historic Places (and the NM State Register of Cultural Properties). Results from these efforts must be provided to this office before a determination of effect can be made. Any archaeological sites, historic buildings, or other cultural resources identified in the general area must be noted.

- A description of efforts to identify whether Native American tribes, that may be culturally affiliated with traditional cultural properties or other kinds of sites within the APE, have any concerns related to the proposed undertaking.

- Identification of the funding source: federal, state, state trust, private, a combination?

For historic building rehabilitation, accessibility improvements, demolition, or construction also include:

- Approximate construction dates for buildings or structures in the Area of Potential Effect.
- Current photographs (originals) of any building(s) or structure(s) to be affected by the project. Overall exterior photos are sufficient. Photos need to be clear enough for HPD staff to evaluate the historic integrity of the building(s).
- Project location clearly marked on a street map within a municipality, or, if it will occur in a rural location, the USGS quadrangle map as described above.
- Preliminary drawings or plans of the project design on topo and/or street map as appropriate.

Allow 30 days for HPD review as per 36 CFR 800.3(c)(4), 800.4(d)(1), 800.5(c), and 800.11

Useful information, including lists of cultural properties on the national and state registers, can be obtained from our web site: http://museums.state.nm.us/hpd/
The locational information is requested to help us determine whether any previous archaeological survey or historic structure documentation has been conducted in the AHP. Commonly, agencies and organizations preparing for an undertaking of this nature conduct an environmental or cultural resources consulting firms to determine the status of cultural property inventory on a given AHP, complete an archaeological and/or historic structure survey if none has been performed, and assist an agency in deciding which, if any, Native American tribes should be consulted. A list of permitted archaeologists and archaeological firms is available from this office upon request or can be downloaded from our website (http://museums.state.nm.us/hpd/). The cultural resources specialist will write a report of the survey results and recommendations and submit it to your office. Please send us the report for review and consultation regarding any historic properties that might be found during the survey and any effects of the proposed project upon them. The report should be accompanied by a cover letter requesting a formal determination of effect for the undertaking.

Please note that, pursuant to the revised 36 CFR 800 guidelines issued by the Advisory Council for Historic Preservation, Native American tribes that may be culturally affiliated with traditional cultural properties (and other historic properties) in the area of effect must be consulted prior to the beginning of project work. This is true even if the area of effect does not lie within the boundaries of an Indian Reservation; neighboring tribes may have concerns. In order to accomplish this consultation, it is not necessary to contact every tribe in New Mexico, but you must make a good faith effort to identify tribes that may have issues in the area of effect and ensure that they are consulted. Some tribes may not wish to provide sensitive information to a consulting firm or local government agency. In these cases, tribes may wish to request that the federal agency be involved, or they may contact our office directly with their concerns. If you need further information about how such consultation should proceed, please contact this office. Staff at the federal offices that are helping you complete your funding application can also provide guidance and assistance regarding tribal consultation. The federal agency that you are working with can also provide the letter that authorizes you to initiate the consultation.

Ms. Linda DeVine  
EIAP Project Manager  
Department of the Air Force  
HQ ACC/CEVP  
129 Andrews Street, Suite 102  
Langley AFB, Virginia 23665-2769

Subject: Environmental Analysis, Defensive Training Initiative, Cannon AFB, New Mexico

Dear Ms. DeVine:

Please maintain us on the mailing list for commenting on the Environmental Assessment of the subject project.

Thank you.

Sincerely,

Rita Trujillo  
Program Manager  
Control Strategy Section
Thank you for your input

PLEASE PRINT

THE CHAFF TO BE RELEASED FROM AIRCRAFT AS PART OF THE
PROPOSED DTI CONTAINS ALUMINUM, COPPER, AND ZINC.
(REFERENCE TABLE 3.2-1, P. 3-4 OF THE ENVIRONMENTAL ASSESSMENT)

ALUMINUM, COPPER COMPOUNDS, AND ZINC COMPOUNDS ARE ALL
CONSIDERED TOXIC SUBSTANCES BY THE U.S. E.P.A. THEY ARE REGULATED
BY CERCLA (SEE P. 3-4 OF THE ABOVE DOCUMENT). I BELIEVE
THAT THE NEW MEXICO ENVIRONMENT DEPT. WOULD CONSIDER THESE
SUBSTANCES WATER CONTAMINANTS.

HAS THIS BEEN ADDRESSED TO THE NM ENVIRONMENT DEPT.?
WILL NEW MEXICO REQUIRE A PERMIT TO DISCHARGE THESE SUBSTANCES
IN SURFACE WATER AND SOIL?

**** CONTINUE ON BACK FOR MORE SPACE ****

Please be advised that by including your name and address, you are agreeing to it being part of the EA public record.
