Information Technology Sector

18. *November 22, SecurityWeek* – (International) **Office 365 flaw made fake Microsoft emails look legitimate.** A Turkey-based security researcher discovered a flaw in Microsoft Office 365 that could be exploited by attackers to send malicious emails and make them appear as if they were sent from a legitimate microsoft.com email address

after a test of different email services' spam filters found that some of his phishing emails that were marked as valid came from a spoofed microsoft.com address and were forwarded through Outlook 365 to the Yandex email service. Additional testing found that Gmail also accepted the spoofed microsoft.com emails that were forwarded from Outlook as legitimate.
Source: http://www.securityweek.com/office-365-flaw-made-fake-microsoft-emails-look-legitimate

19. *November 21, SecurityWeek* – (International) **Code execution flaws patched in HDF5 library.** The HDF Group released version 1.8.18 of its HDF5 library after researchers from Cisco's Talos Vulnerability Development Team discovered the library was plagued with a total of 4 local heap-buffer overflow flaws that could allow an attacker to execute arbitrary code in the context of the application using the library if they trick a victim into opening a maliciously crafted file. The vulnerabilities are the result of a failure to check if the number of dimensions for an array from a file is within bounds, failure to check if certain message types support a specific flag, and insufficient handling of select values in memory when parsing a Hierarchical Date Format (HDF) file, among other failures.
