1982:23). The largest source of uranium in the cattle feed was from commercial mineral supplements typically fed to cattle in the area (Pantex 1996:16.1). An ecological analysis of potential risks to various animals from either direct or indirect ingestion of radiological residues in vegetation in the immediate vicinity of Pantex Plant obtained similar conclusions (PC 1995s).

Agriculture within the Pantex Plant Region of Influence is considered an important asset. A detailed discussion of the ecological and land use resources of the regional agricultural

industry is provided in the Pantex Plant *Environmental Information Document* (Pantex 1996).

Wildlife

The uplands of Pantex Plant support a variety of invertebrates, reptiles, amphibians, birds, and mammals. With individuals of the following taxa recorded at Pantex Plant, the insect class is well-represented: grasshoppers, beetles, true bugs, flies, bees, wasps, ants, moths, butterflies, and dragonflies (DOE 1994k:6). The most frequently occurring species of reptiles and
