

TABLE 5.5.2.3–2.—*De Minimis* Thresholds

CRITERIA POLLUTANT	DEGREE OF NONATTAINMENT	METRIC TONS (tons/year)
Ozone (VOCs and NO ₂)	Serious Severe Extreme Other ozone nonattainment areas (outside of ozone transport region)	45.4 (50) 22.7 (25) 9.1 (10) 90.7 (100)
VOCs	Marginal/moderate nonattainment (within ozone transport region)	45.4 (50)
NO ₂	Marginal/moderate nonattainment (within ozone transport region)	90.7 (100)
Carbon monoxide (CO)	All	90.7 (100)
Particulate matter (PM ₁₀)	Moderate Serious	90.7 (100) 63.5 (70)
Sulfur/nitrogen dioxide (SO ₂ /NO ₂)	All	90.7 (100)
Lead (Pb)	All	22.7 (25)

Since the Manzano WSA was in a maintenance for attainment area for CO, the de minimis value for CO was 90.7 metric tons (100 tons) per year. As shown in Table 5.5.2.3–1, the emission rate for CO is well below the de minimis value.

Therefore, a general conformity analysis is not required for the Manzano WSA. Further, the County has recently been designated attainment area for CO.
